

JOHN A. SEAVERNS

1844

Extraordinary FOX CHASE, by the Duke of Beaufort's Hounds, at CASTLE COOMBE.

THOUGHTS
UPON
H A R E A N D F O X
H U N T I N G,

IN A
SERIES OF LETTERS TO A FRIEND,

IN WHICH ARE GIVEN
AMPLE DIRECTIONS FOR ERECTING A KENNEL, THE
MANAGEMENT OF HOUNDS, AND THE DUTIES
AND QUALIFICATIONS NECESSARY FOR
THE HUNTSMAN AND WHIPPER-IN.

ALSO
AN ACCOUNT
OF THE
Most Celebrated Dog Kennels in the Kingdom.

Illustrated with twenty beautiful Engravings.

By PETER BECKFORD, Esq.

A NEW EDITION:

L O N D O N :
PRINTED FOR VERNOR AND HOOD, BIRCHIN LANE,
CORNHILL. 1796.

ADVERTISEMENT.

THE Publishers of the present Edition of this much-admired *Treatise upon Hunting* feel themselves impelled to state candidly, but briefly, the motives which induced them to undertake it.

That most sportsmen who were not already possessed of the former editions of this valuable *library of sporting knowledge*, have been desirous of procuring it, but sought for it in vain, is a fact well known to every frequenter of the chace; the book, therefore, meets the public eye in its present embellished state, in consequence of repeated solicitations from gentlemen in almost every quarter of the kingdom, accompanied with well-grounded assurances from many of them, that it would by no means be disagreeable to Mr. Beckford.

Conscious of not being able to add to the literary fame which the writer has acquired by this publication, they have confined themselves merely to the decorative, inserting only such explanatory descriptions of the plates as appeared necessary.

On the whole, they trust, that without giving any offence to the ingenious author, (the idea of which would be painful to them) they have contributed not a little to the gratification of every admirer of the cheerful and manly amusements of the field.

P R E F A C E.

AS the author of the following letters hath been charged with inhumanity, and yet conjectured to be a clergyman, it is now become necessary to publish his name; and though it may not be usual to answer an anonymous writer, yet, as it is not impossible that some readers may have adopted his sentiments, this consideration, and this alone, induces the author to answer the objections which the critic hath so wantonly made. Whatever may be the imperfection of these letters, the author is desirous that it should fall, as it ought, upon himself only. The objections, which he thinks were unnecessarily made, he has endeavoured to remove. All intentional cruelty

he entirely disclaims. His appeal from that accusation lies to those whom he addresses as his judges; not (as the critic may think) because they are equally barbarous with himself, but because sportsmen only are competent to decide.

CON-

CONTENTS.

LETTER I. Page 1.

The subject introduced—Hunting recommended not only as an entertaining, but also as a wholesome exercise—Cervantes, and the Spectator—their opinion of hunting—For whom these letters are intended—Explanation of the frontispiece.

LETTER II. Page 15.

The kennel described with all its parts.

LETTER III. Page 27.

Of hounds in general—Hounds of the middle size recommended—A perfect hound described—Skirters disapproved of—Objections to a large pack.

LETTER IV. Page 37.

Of feeding hounds, and managing them in the kennel—Of the feeder—Cleanliness recommended—Time of feeding ill suited to severity.

LETTER V. Page 53.

Of breeding hounds, and naming them—Of the treatment of whelps, when first taken into the kennel—Of rounding them, and spaying bitches—Of the number necessary to keep up the stock—A list of names.

LETTER VI. Page 76.

Of coupling young hounds, and breaking them from sheep—Of entering them—Best method to make them steady—Kennel discipline objected to.

LETTER VII. Page 86.

The same subject continued—Hounds made handy by being taken out often—Different methods of entering young fox-hounds described—Entering them at the martin cat recommended—Entering them at hare censured.

LETTER VIII. Page 107.

Of diseases and their remedies—A curious prescription for the cure of the mange, either in man or beast—Observations on madnefs.

LETTER IX. Page 122.

Of the huntsman and whipper-in—Observations on scent.

LETTER X. Page 133.

Hare-hunting described in all its parts—Of hounds best suited to that diversion—Of the best method of hunting them—Sportsmen not intentionally cruel—Of the trial in a morning—Of hare finders—A particular method of hare-hunting related—Curious advice about dressing a hare.

LETTER XI. Page 145.

Hare-hunting continued—The many shifts which a hare makes described—A hint to such sportsmen as continue talking when their hounds are at fault—Chopping hares censured; directions how to prevent it—Of the harmony of a pack—A hint to such sportsmen as ride over their hounds.

LET-

LETTER XII. Page 154.

Of a hare-warren—The hares how caught—Best method of turning them out—How a hare may be made to run strait—Time to leave off hare-hunting—Of stag-hunting at Turin.

LETTER XIII. Page 160.

The description of a fox-chace attempted.

LETTER XIV. Page 170.

Remarks on the foregoing letter—when an early hour is necessary—Some observations on the drawing of hounds—Bad sportsmen described—A gentleman's extraordinary knowledge of hunting—To make hounds steady and draw well, recommended—Much noise at finding a fox censured.

LETTER XV. Page 181.

Remarks on letter 13 continued—Some directions to the huntsman and whipper-in—Of stile in killing a fox—Of changing from one fox to another—Rules to be observed when this happens—Some observations on the casting of hounds—Riding too close upon them censured.

LETTER XVI. Page 191.

Remarks on letter 13 still continued—Of halloos—Some remarkable instances of them—When a fox ought not to be given up—When a pack of fox-hounds may be suffered to try back—When sportsmen ought to be silent—Method of treating a fox described—When it is the best time to eat him.

LETTER XVII. Page 199.

A digression in favour of fox-hunting—View halloos, when too frequently given, censured—Of stopping the tail hounds, and throwing them in at head—Of skirters, when they do hurt—A hint to those who follow hounds—When foxes are in too great plenty, how to disperse them—A Frenchman's opinion of a fox-chace.

LETTER XVIII. Page 209.

When an excellent whipper-in may be of more use than an excellent huntsman—Barbarity defined—Unnecessary severity censured—Duty of a whipper-in—A perfect one described—Of steadiness—Of hounds that kill sheep—Necessity of obedience—After hounds are made steady, some caution
I
required

required to keep them so—A curious letter from a huntsman.

LETTER XIX. Page 227.

How a huntsman should draw his hounds—Placing hounds advantageously, a necessary part of fox-hunting—When hounds do not hunt, how they should be fed—Of drafting hounds—When a huntsman should be after his time—Where foxes like best to lie—When gentlemen may be of service to hounds—Long drags, the objection to them—The sagacity of the buck-hound accounted for—Correction of hounds by the huntsman, objected to—Hounds that will not leave a cover, how treated—Of the good management of a pack of fox-hounds.

LETTER XX. Page 246.

How a huntsman should cast his hounds—When hounds had better be exercised on the turnpike road, than hunted—When it may be right to stop the tail hounds, and throw them in at head—Huntsmen that are slow censured—When they should be careful not to run the heel—When hounds have many scents, how they should be managed—Of the heading back of foxes—What constitutes a perfect huntsman.

LET-

LETTER XXI. Page 266.

A hare-hunter an improper huntsman to a pack of fox-hounds—The harrier and fox-hound, in what they materially differ—Fitness essential to beauty—How sportsmen may be of service to tired hounds—Of long days, the disadvantage—The use—Why a fox hound should be above his work—Much encouragement to hounds on bad scenting days, objected to—Of hounds that run false.

LETTER XXII. Page 278.

Blood necessary to a pack of fox-hounds—The likeliest method to procure it—Of accidents that happen in fox-hunting—Of the proper time to leave off fox-hunting—A wanton destruction of foxes censured—Inequality of scent unfavourable to hounds—An extraordinary character of a huntsman.

LETTER XXIII. Page 295.

*Bag-foxes: some objection to them—A fox-court recommended—Directions how cubs should be treated—Some caution necessary in buying of foxes—Of digging foxes—Badgers objected to—A method to sink an earth—How badgers may be caught—Of terriers—Of destroying foxes—A remarkable instance of the *lex talionis*.*

LET-

LETTER XXIV. Page 309.

Subject concluded—Some observations concerning the management of a hunter—Remarks upon shoeing—Summer hunting objected to—Virgil, Horace, Pliny: their opinion of a country life—Hunting not so dangerous as it has been thought—Some quotations from other authors.

Account of the most celebrated dog-kennels, page 326.

THOUGHTS

UPON

HUNTING.

LETTER I.

Bristol Hot-Wells, March 20, 1779.

YOU could not have chosen, my friend, a better season than the present, to remind me of sending you my Thoughts upon Hunting; for the accident that brought me hither is likely to detain me some time: besides, I have no longer a plea for not obeying your commands. Hitherto, indeed, I had excused myself, in hopes that some publication on the subject might have rendered these letters needless; but since nothing of the kind, although so much wanted, has appeared, as I am now sufficiently unoccupied to undertake the task, I shall not think it a trifling

B filing

fling subject, if you think it a necessary one; and I wish my own experience of the diversion may enable me to answer the many questions which you are pleased to propose concerning it.

Knowing your partiality to rhyme, I could wish to send you my thoughts in verse; but as this would take up more time, without answering your purpose better, I must beg you to accept them in humble prose, which, in my opinion, is better suited to the subject. Didactic essays should be as little clogged as possible; they should proceed regularly and clearly; should be easily written, and as easily understood, having less to do with words than things. The game of *crambo* is out of fashion, to the no small prejudice of the rhyming tribe; and before I could find a rhyme to *porringer*, I should hope to finish a great part of these letters: I shall therefore, without farther delay, proceed upon them: this, however, I must desire to be first understood between us; that when, to save trouble to us both, I say a thing *is*, without tacking a salvo to the tail of it, such as, *in my opinion—to the best of my judgment*, &c. &c.—you shall not call my humility in question, as the assertion is not meant to be mathematically certain. When I have any better authority than my own, such as Somerville, for instance, (who, by the bye, is the only one that has written intelligibly on this subject) I shall

shall take the liberty of giving it you in his own words, to save you the trouble of turning to him.

You may remember, perhaps, that when we were hunting together at Turin, the hounds having lost the stag, and the piqueurs (still more in fault than they) being ignorant which way to try, the king bid them ask *Milord Anglois*. Nor is it to be wondered at, if an Englishman should be thought to understand the art of hunting, as the hounds which this country produces are universally allowed to be the best in the world: from whence I think this inference may be drawn, that although every man who follows this diversion may not understand it, yet it is extraordinary of the many who do, that one only of any note should have written on the subject. It is rather unfortunate for me that this ingenious sportsman should have preferred writing an elegant poem to an useful lesson; since, if it had pleased him, he might easily have saved me the trouble of writing these letters. Is it not strange in a country where the press is in one continued labour with opinions of almost every kind, from the most serious and instructive to the most ridiculous and trifling; a country besides, so famous for the best hounds, and the best horses to follow them, whose authors sometimes hunt, and whose sportsmen sometimes write, that only the practical part

of hunting should be known? There is, however, no doubt that the practical part of it would be improved, were it to be accompanied by theory.

France, Germany, and Italy, are also silent, I believe, on this subject, though each of these countries has had its sportsmen. Foxes, it is true, they never hunt, and hares but seldom; yet the stag and wild boar, both in France and in Germany, are still pursued with the utmost splendour and magnificence. In Italy there has been no hunting since the death of the Duke of Parma: he was very fond of it, and I apprehend all hunting in that country ceased with him. The only sportsmen now remaining are gentlemen in green coats, who taking their *couteaux de chasse* along with them, walk into the fields to catch small birds, which they call *andar a la caccia*, or, in plain English, *going a hunting*; yet it has not been so with horsemanship; *that* has been treated scientifically by all—in Italy by Pignatelli—in Germany by Isenbourg—and in France by La Gueriniere: nor are the useful lessons of the Duke of Newcastle confined to this country only; they are both read and practised every where; nor is *he* the *only* noble lord who has written on the subject. While upon hunting, all are silent, and were it not for the muse of Somerville, who has so judiciously and so sweetly sung, the dog,
that

that useful, that honest, that faithful, that disinterested, that entertaining animal, would be suffered to pass unnoticed and undistinguished.

A northern court once, indeed, did honour this animal with a particular mark of approbation and respect; but the fidelity of the dog has since given place to the sagacity of the elephant.* Naturalists, it is true, have included dogs in the specific descriptions they have given us of animals. Authors may have written on hunting, and booksellers may know many that to sportsmen are unknown; but I again repeat, that I know not any writer, ancient or modern, from the time of Nimrod to the present day (one only excepted) who has given any useful information to a sportsman.†

It may be objected, that the hunting of a pack of hounds depends upon the huntsman, and that the huntsman, generally speaking, is an illiterate fellow, who seldom can either read or write: this cannot well be denied. I must, therefore, observe, that it is impossible for the business of a kennel to go on as it ought, unless

* Vide Mr. Pope's Letter to Mr. Cromwell.

† Many French authors have given rules for hunting the hare, and stag; to make this passage less exceptionable, therefore, it may be better perhaps, instead of *sportsman*, to read *fox-hunter*.

the master himself knows something of it. There must be an understanding somewhere, and without it no gentleman can enjoy in perfection this noble diversion.

It was the opinion of a great sportsman, that it is not less difficult to find a perfect huntsman, than a good prime minister. Without taking upon me to determine what requisites may be necessary to form a good prime minister, I will describe some of those which are essentially necessary towards forming a perfect huntsman; qualities which, I will venture to say, would not disgrace more brilliant situations: such as a clear head, nice observation, quick apprehension, undaunted courage, strength of constitution, activity of body, a good ear, and a good voice.

There is not any one branch of knowledge, commonly dignified with the title of art, which has not such rudiments or principles, as may lead to a competent degree of skill, if not to perfection, in it: whilst hunting, the sole business of some, and the amusement of most of the youth in this kingdom, seems left entirely to chance. Its pursuit puts us, both to greater expence, and also, to greater inconvenience than any other; yet, notwithstanding this, we trust our diversion in it to the sole guidance of a huntsman: we follow just as he shall chuse to conduct us; and we

we suffer the success, or disappointment of the chase to depend solely on the judgment of a fellow, who is frequently a greater brute than the creature on which he rides. I would not be understood to mean by this, that a huntsman should be a scholar, or that every gentleman should hunt his own hounds: it is not necessary a huntsman should be a man of letters; but give me leave to observe, that had he the best understanding, he would frequently find opportunities of exercising it, and intricacies which might put it to the test. You will say, perhaps, there is something too laborious in the occupation of a huntsman for a gentleman to take it upon himself; you may also think it is beneath him; I agree with you in both—yet I hope that he may have leave to understand it. If he follow the diversion, it is a sign of his liking it; and if he like it, surely it is some disgrace to him to be ignorant of the means most conducive to obtain it.

I find there will be no necessity to say much in commendation of a diversion to you, which you so professedly admire;* it would be needless, there-

* Since the above was written, hunting has undergone a severe censure, (vide *Monthly Review* for September, 1781) nor will any thing satisfy the critic less than its total abolition. He recommends feats of agility to be practised and exhibited instead of it. Whether the amendment proposed by the learned

therefore, to enumerate the heroes of antiquity who were taught the art of hunting; or the many great men (among whom was the famous Galen) who have united in recommending it. I shall, however, remind you, that your beloved hero, Henry the Fourth of France, made it his chief amusement, and his very love letters, strange as it may appear, are full of little else: and that one of the greatest ministers which our own country ever produced, was so fond of this diversion, that the first letter he opened, as I have been told, was generally that of his huntsman.—In most countries, from the earliest times, hunting has been a principal occupation of the people, either for use or amusement; and many princes have made it their chief delight: a circumstance which occasioned the following *bon mot*.—Louis the Fifteenth was so passionately fond of this diversion, that it occupied him entirely; the King of Prussia, who never hunts, gives up a great deal of his time to music, and himself plays on the flute: a German, last war meeting a French-

gentleman be desirable or not, I shall forbear to determine; taking the liberty, however, to remind him, that as hunting hath stood its ground from the earliest times, been encouraged and approved by the best authorities, and practised by the greatest men, it cannot now be supposed to dread criticism, or to need support. Hunting originates in nature itself, and it is in perfect correspondence to this law of nature, that the several animals are provided with necessary means of attack and defence.

man,

man, asked him very impertinently, “*Si son maitre chassoit toujours?*” “*Oui, oui,*” replied the other — “*il ne joue jamais de la flute.*” — The reply was excellent, but it would have been as well, perhaps, for mankind, if that great man had never been otherwise employed. — Hunting is the soul of a country life; it gives health to the body, and contentment to the mind; and is one of the few pleasures we can enjoy in society, without prejudice either to ourselves, or our friends.

The Spectator has drawn with infinite humour the character of a man who passes his whole life in pursuit of trifles; and it is probable, other Will Wimbles might still be found. I hope, however, that he did not think they were confined to the country only. Triflers there are of every denomination. Are we not all triflers? and are we not told that all is vanity? — The Spectator, without doubt, felt great compassion for Mr. Wimble; yet Mr. Wimble might not have been a proper object of it; since it is more than probable he was a happy man, if the employment of his time in obliging others, and pleasing himself, can be thought to have made him so. — Whether vanity mislead us or not in the choice of our pursuits, the pleasures or advantages which result from them, will best determine. — I fear the occupation of few gentlemen will admit of nice scrutiny; occupations, therefore,
that

that amuse, and are at the same time innocent; that promote exercise and conduce to health; though they may appear trifles in the eyes of others, certainly are not so to those who enjoy them. Of this number I think I may reckon hunting; and I am particularly glad the same author furnishes a quotation in support of it; “for my own part,” says this elegant writer, “I
 “intend to hunt twice a week during my stay
 “with Sir Roger; and shall prescribe the moderate use of this exercise to all my country
 “friends, as the best physic for mending a bad
 “constitution, and preserving a good one.”—

The inimitable Cervantes also honourably mentions this diversion: he makes Sancho say —
 “Mercy on me, what pleasure can you find, any
 “of ye all, in killing a poor beast that never
 “meant any harm!” that the Duke may reply,
 “—You are mistaken, Sancho; hunting wild
 “beasts is the most proper exercise for knights
 “and princes; for in the chase of a stout noble
 “beast, may be represented the whole art of
 “war, stratagems, policy, and ambuscades, with
 “all other devices usually practised to overcome
 “an enemy with safety. Here we are exposed
 “to the extremities of heat and cold; ease and
 “laziness can have no room in this diversion;
 “by this we are inured to toil and hardship, our
 “limbs are strengthened, our joints made supple,
 “and our whole body hale and active: in short,

“ it

“ it is an exercise that may be beneficial to many, and can be prejudicial to none.”—Small, indeed, is the number of those, who in the course of 5000 years have employed themselves in the advancement of useful knowledge. Mankind have been blest with but one Titus, that we know of; and, it is to be feared, he has had but few imitators. Days and years fly away, nor is any account taken of them, and how many may reasonably be supposed to pass without affording even amusement to others, or satisfaction to ourselves. Much more, I think, might be said in favour of the Wimbles; but it must be confessed, that the man who spends his whole time in trifles, passes it contemptibly, compared with those who are employed in researches after knowledge useful to mankind, or in professions useful to the state.

I am glad to find that you approve of the plan I propose to observe in the course of these letters, wherein it shall be my endeavour not to omit any thing which it may be necessary for you to know; at least, as far as my own observation and experience will give me leave. The experience I have had may be of use to you at present; others, perhaps, hereafter may write more judiciously and more fully on the subject: you know it is my interest to wish they would. The few who have written on hunting, refer you to their predecessors for great part of the information

tion you might expect from them; and who their predecessors were I have yet to learn. Even Somerville is less copious than I could wish, and has purposely omitted what is not to be found elsewhere; I mean receipts for the cure of such diseases as hounds are subject to. He holds such information cheap, and beneath his lofty muse. Prose has no excuse, and you may depend on every information that I can give. The familiar manner in which my thoughts will be conveyed to you in these letters, may sufficiently evince the intention of the author. They are written with no other design than to be of use to sportsmen. Were my aim to amuse, I would not endeavour to instruct. A song might suit the purpose better than an essay. To improve health by promoting exercise; to excite gentlemen who are fond of hunting to obtain the knowledge necessary to enjoy it in perfection; and to lessen the punishments which are too often inflicted on an animal so friendly to man, are the chief ends intended by the following letters.

I shall not pretend to lay down rules which are to be equally good in every country; I shall think myself sufficiently justified in recommending such as have been tried with success in the countries where I have generally hunted. As almost every country has a different dialect, you will also excuse, I hope, any terms that may not be

be current with *you*: I will take the best care I can that the number shall be small. I need not, I think, advise you not to adopt too easily the opinions of other men. You will hear a tall man say it is folly to ride any but large horses; and every little man in company will immediately sell his little horses, buy such as he can hardly mount, and ride them in hilly countries, for which they are totally unfit. Pride induces some men to dictate; indolence makes others like to be dictated to; so both parties find their account in it. You will not let this mislead you. You will dare to think for yourself.—Nor will you believe every man who pretends to know what you like better than you do yourself. There is a degree of coxcombry, I believe, in every thing: you have heard, I make no doubt, that greyhounds are either black, or white, or black and white; and if you have any faith in those who say they know best, they will tell you that there are no others.* Prejudice, however, is by far too blind a guide to be depended on.

I have read somewhere, that there is no book so bad, but a judicious reader may derive some advantage from the reading of it; I hope these

* There is a fashion in greyhounds: some coursers even pretend that *all* not being of the fashionable colour are curs, and not greyhounds. Greyhound seems to be a corruption from some other word—most probably from gaze-hound.

letters will not prove the only exception. Should they fall into the hands of such as are not sportsmen, I need not, I think, make any excuses to them for the contents, since the title sufficiently shews for whom they were designed. Nor are they meant for such sportsmen as need not instruction, but for those that do; to whom, I presume, in some parts at least, they may be found of use. Since a great book has been long looked upon as a great evil, I shall take care not to sin that way at least, and shall endeavour to make these letters as short as the extent of my subject will admit.

I shall now take my leave of you for the present; in my next letter I shall proceed according to your desire, till I have answered all your questions. Remember you are not to expect entertainment; I wish that you may find some instruction: the dryness of the subject may excuse *your* want of the one, and I cannot doubt of your indulgence, whilst I am obeying your commands, though *I* should fail in the other.

LETTER II.

SINCE you intend to make hunting your chief amusement in the country, you are certainly in the right to give it some consideration before you begin, and not like Master Stephen in the play, first buy a hawk, and then hunt after a book to keep it by. I am glad to find that you intend to build a new kennel, and I flatter myself the experience I have had may be of some use to you in building it: it is not only the first thing that you should do, but it is also the most important. As often as your mind may alter, so often may you easily change from one kind of hound to another; but your kennel will still remain the same; will still keep its original imperfections, unless altered at a great expence; and be less perfect at last than it might have been made at first, had you pursued a proper plan. It is true, hounds may be kept in barns and stables; but those who keep them in such places can best inform you whether their hounds are capable of answering the purposes for which they were designed. The sense of smelling, the *odora canum vis*, as Virgil calls it, is so exquisite in a hound, that I cannot but suppose every stench is hurtful to it. It is that faculty on which all our hopes depend:

depend; it is *that* which must lead us o'er greasy fallows, where the feet of the game we pursue being clogged leave little scent behind, as well as o'er stony roads, through watery meads, and where sheep have stained the ground.

Cleanliness is not only absolutely necessary to the nose of the hound, but also to the preservation of his health. Dogs are naturally cleanly animals; they seldom, when they can help it, dung where they lie; air and fresh straw are necessary to keep them healthy. They are subject to the mange; a disorder to which poverty and nastiness will very much contribute. *This*, though easily stopped at its first appearance, if suffered to continue long may lessen the powers of the animal; and the remedies which are then to be used, being in themselves violent, must injure his constitution: it had better be prevented: let the kennel, therefore, be an object of your particular care.

“ Upon some little eminence erect,
 And fronting to the ruddy dawn; its courts
 On either hand wide opening to receive
 The sun's all-cheering beams, when mild he shines,
 And gilds the mountain tops.”——

Let such as Somerville directs be the situation; its size must be suited to the number of its inhabitants; the architecture of it may be conformable
 to

to your own taste. Useless expence I should not recommend; yet, as I suppose you will often make it a visit, at least in the hunting season, I could wish it might have neatness without, as well as cleanliness within, the more to allure you to it; I should for the same reason wish it to be as near to your house as you will give it leave. I know there are many objections to its being very near; I foresee still more to its being at a distance: there is a vulgar saying, that it is the master's eye that makes the horse fat; I can assure you it is even more necessary in the kennel, where cleanliness is not less essential than food.

There are, I make no doubt, many better kennels than mine, some of which you should see before you begin to build; you can but make use of my plan in case that you like no other better. If, in the mean time, I am to give you my opinion what a kennel ought to be, I must send you a description of my own, for I have not seen many others.

I would advise you to make it large enough at first, as any addition afterwards must spoil the appearance of it. I have been obliged to add to mine, which was built from a plan of my own, and intended, at first, for a pack of beagles. My feeding-yard being too small, I will endeavour to remedy that defect in the description I send you,

C

which

which may be still enlarged or lessened, as you think fit, or as your occasions may require. The feeding troughs should be wide at the bottom, and must have wooden covers.

I think two kennels absolutely necessary to the well-being of the hounds; when there is but one, it is seldom sweet; and when cleaned out, the hounds, particularly in winter, suffer both whilst it is cleaning, and as long as it remains wet afterwards. To be more clearly understood by you, I shall call one of these the *hunting-kennel*, by which I mean that kennel into which the hounds, intended to hunt the next day, are drafted. Used always to the same kennel, they will be drafted with little trouble; they will answer to their names more readily, and you may count your hounds into the kennel with as much ease as a shepherd counts his sheep out of the fold.

When the feeder first comes to the kennel in a morning, he should let out the hounds into the outer court; and in bad weather he should open the door of the hunting-kennel, lest want of rest should incline them to go into it. The lodging-room should then be cleaned out, the doors and windows of it opened, the litter shaken up, and the kennel made sweet and clean before the hounds return to it again. The great court and
the

the other kennels are not less to be attended to, nor should you pass over in silence any omission that is hurtful to your hounds.

The floor of each lodging-room should be bricked, and sloped on both sides to run to the centre, with a gutter left to carry off the water, that when they are washed they may be soon dry. If water should remain through any fault in the floor, it should be carefully mopped up; for as warmth is in the greatest degree necessary to hounds after work, so damps are equally prejudicial. You will think me, perhaps, too particular in these directions; yet there can be no harm in your knowing what your servants ought to do; as it is not impossible it may be sometimes necessary for you to see that it is done. In your military profession you are perfectly acquainted with the duty of a common soldier, and though you have no further business with the minutiae of it, without doubt you still find the knowledge of them useful to you: believe me, they may be useful *here*; and you will pardon me, I hope, if I wish to see you a Martinet in the kennel as well as in the field. Orders given without skill are seldom well obeyed, and where the master is either ignorant, or inattentive, the servant will be idle.

I also wish that, contrary to the usual practice in building kennels, you would have three doors; two in the front, and one in the back; the last to have a lattice-window in it, with a wooden shutter, which is constantly to be kept closed when the hounds are in, except in summer, when it should be left open all the day. This door answers two very necessary purposes: it gives an opportunity of carrying out the straw when the lodging-room is cleaned, and as it is opposite to the window, will be a means to let in a thorough air, which will greatly contribute to keep it sweet and wholesome. The other doors will be of use in drying the room, when the hounds are out; and as one is to be kept shut, and the other hooked back, (allowing just room for a dog to pass) they are not liable to any objection. The great window in the centre should have a folding-shutter; half, or the whole of which, may be shut at nights, according to the weather; and your kennels by that means may be kept warm or cool, just as you please to have them. The two great lodging-rooms are exactly alike, and as each has a court belonging to it, are distinct kennels, situated at the opposite ends of the building; in the centre of which is the boiling-house and feeding-yard; and on each side a lesser kennel, either for hounds that are drafted off, hounds that are sick or lame, or for any other purpose, as occasion may require. At the back
of

of which, as they are but half the depth of the two great kennels, are places for coals, &c. for the use of the kennel. There is also a small building in the rear for hot bitches. The floors of the inner courts, like those of the lodging-rooms, are bricked and sloped towards the centre: and a channel of water, brought in by a leaden pipe, runs through the middle of them. In the centre of each court is a well, large enough to dip a bucket to clean the kennels; this must be faced with stone, or it will be often out of repair. In the feeding-yard it should have a wooden cover.

The benches, which must be open to let the urine through, should have hinges and hooks in the wall, that they may fold up, for the greater convenience in washing out the kennel; they should also be made as low as possible, that a hound, when he is tired, may have no difficulty in jumping up; and at no time may be able to creep under:* let me add, that the boiler should be of cast iron.

* Benches cannot be too low:—If, owing to the smallness of the hound, it should be difficult to render them low enough, a projecting ledge will answer the same purpose, and the benches may be boarded at bottom to prevent the hound from creeping under.

The rest of the kennel consists of a large court in front, which is also bricked, having a grass-court adjoining, and a little brook running through the middle of it. The earth that was taken out of it is thrown up into a mount, where the hounds in summer delight to sit. This court is planted round with trees, and has, besides, a lime tree, and some horse chestnut trees near the middle of it, for the sake of shade. A high pale incloses the whole; part of which, to the height of about four feet, is close; the other open; the interstices are about two inches wide. The grass-court is pitched near the pale, to prevent the hounds from scratching out. If you cannot guess the intention of the posts which you see in the courts, there is scarcely an inn window on any road, where the following line will not let you into the secret:

“So dogs will p— where dogs have p—d before.”

This is done to save the trees, to which the urinary salts are prejudicial. If they be at first backward in coming to them, bind some straw round the bottom, and rub it with galbanum. The brook in the grass-court may serve as a stew: your fish will be very safe.*

* It may also be used as a cold bath for such hounds as stand in need of it. For lameness in the stifle, and for strains, it will be found of service.

At

At the back of the kennel is a house, thatched and furzed up on the sides, big enough to contain at least a load of straw. Here should be a pit ready to receive the dung, and a gallows for the flesh. The gallows should have a thatched roof, and a circular board at the posts of it, to prevent vermin from climbing up. If you can inclose a piece of ground adjoining to your kennel, for such dog horses as may be brought to you alive, it will be of great use, as it might be dangerous to turn them out where other horses go; for you may not always be able to discover their disorders. *Hither* you may also bring your hounds, after they have been fed, to empty themselves; *here* you will have more opportunities of seeing them than in the kennel, and will be enabled, therefore, to make your draft for the next day with greater accuracy.

A stove, I believe, is made use of in some kennels; but where the feeder is a good one, a mop, properly used, will render it unnecessary. I have a little hay-rick in the grass-yard, which, I think, is of use to keep the hounds clean and fine in their coats; you will find them frequently rubbing themselves against it: the shade of it also is useful to them in summer. If ticks at any time be troublesome in your kennel, let the walls of it be well washed; if that should

not destroy them, the walls must then be white-washed.

In the summer when you do not hunt, one kennel will be sufficient; the other then may be set apart for the young hounds, which should also have the grass-court adjoining to it. It is best at that time of the year to keep them separate, and it prevents many accidents which otherwise might happen; nor should they be put together till the hunting season begins.* If your hounds be very quarrelsome, the feeder may sleep in a cot, in the kennel adjoining; and if they be well chastised at the first quarrel, his voice will be sufficient to settle all their differences afterwards.† Close to the door of the kennel, let there be always a quantity of little switches, which three narrow boards, nailed to one of the posts, will easily contain.‡

* The dogs and the bitches may also be kept separate from each other during the summer months, where there are conveniences for it.

† In a kennel in Oxfordshire the feeder pulls a bell, which the hounds understand the meaning of; it silences them immediately, and saves him the trouble of getting out of his bed.

‡ When hounds are perfectly obedient, whips are no longer necessary; switches, in my opinion, are preferable. The whips in use are coach whips three feet long, the thong half the length of the crop. They are more handy than horse whips, correct the hounds as well, and hurt them less.

My

My kennel is close to the road-side, but it was unavoidable. This is the reason why my front pale is close, and only the side ones open; it is a great fault: avoid it if you can, and your hounds will be the quieter.

Upon looking over my letter, I find I begin recommending, with Mr. Somerville, a high situation for the kennel, and afterwards talk of a brook running through the middle of it; I am afraid that you will not be able to unite these two advantages; in which case, without doubt, water should be preferred: the mount I have mentioned will answer all the purposes of an eminence: besides, there should be moveable stages on wheels for the hounds to lie upon; at any rate, however, let your soil be a dry one.

You will think, perhaps, my lodging-rooms higher than is necessary. I know they are considerably higher than is usual; the intention of which is, to give more air to the hounds; and I have not the least doubt that they are the better for it.—I will no longer persecute you with this unentertaining subject, but take my leave.

[Mr. Beckford has here pointed out with much exactness the method of erecting a KENNEL.—
The

The editor of the present edition, by way of further illustration, concludes the work with a description of those of the greatest celebrity in the kingdom, accompanied with four beautiful and picturesque views of them.]

LETTER III.

I BEGIN this letter with assuring you that I have done with the *kennel*: without doubt, you will think I had need. If I have made even the name frightful to you, comfort yourself with the thoughts that it will not appear again.

Your criticism on my switches I think unjust. You tell me self-defence would of course make you take that precaution—do you always walk with a whip in your hand, or do you think that a walking stick, which may be a good thing to knock a dog on the head with, would be equally proper to correct him should he be too familiar? You forget, however, to put a better substitute in the room of them.—

You desire to know, what kind of hound I would recommend: As you mention not for any particular chace, or country, I understand you generally; and shall answer, that I most approve of hounds of the middle size. I believe all animals of that description are strongest, and best able to endure fatigue. In the height, as well as the colour of hounds, most sportsmen have their prejudices; but in their shape at least, I think they must all agree. I know sportsmen, who boldly
affirm

affirm, that a small hound will oftentimes beat a large one; that he will climb hills better, and go through cover quicker;—whilst others are not less ready to assert, that a large hound will make his way in any country, will get better through the dirt than a small one; and that no fence, however high, can stop him.—You have now three opinions; and I advise you to adopt that which suits your country best: there is, however, a certain size, best adapted for business; which I take to be that between the two extremes; and I will venture to say, that such hounds will not suffer themselves to be disgraced in any country. Somerville, I find, is of the same opinion.—

— — — “ But here a mean
 Observe, nor the large hound prefer, of size
 Gigantic; he in the thick-woven covert
 Painfully tugs, or in the thorny brake
 Torn and embarrass'd bleeds: but if too small,
 The pigmy brood in every furrow swims;
 Moil'd in clogging clay, panting they lag
 Behind inglorious; or else shivering creep,
 Benumb'd and faint, beneath the shelt'ring thorn,
 For hounds of middle size, active and strong,
 Will better answer all thy various ends,
 And crown thy pleasing labours with success.”

I perfectly agree with you, that to look well, they should be all nearly of a size; and, I even think, they should all look of the same family.—

“ *Facies non omnibus una,
 Nec diversa tamen, qualem decet esse fororum.*”

If handsome withall, they are then perfect. With regard to their being fizeable, what Somerville says, is so much in your own way, that I shall fend it you.—

“ As some brave captain, curious and exact,
 By his fix'd standard forms in equal ranks
 His gay battalion, as one man they move
 Step after step, their size the same, their arms
 Far-gleaming, dart the same united blaze :
 Reviewing generals his merit own ;
 How regular ! how just ! and all his cares
 Are well repaid, if mighty GEORGE approve.
 So model thou thy pack, if honour touch
 Thy generous soul, and the world's just applause.”

There are necessary points in the shape of a hound, which ought always to be attended to by a sportsman ; for, if he be not of a perfect symmetry, he will neither run fast, nor bear much work : he has much to undergo, and should have strength proportioned to it.—Let his legs be straight as arrows ; his feet round, and not too large ; his shoulders back ; his breast rather wide than narrow ; his chest deep ; his back broad ; his head small ; his neck thin ; his tail thick and brushy ; if he carry it well, so much the better : This last point, however trifling it may appear to you, gave rise to a very odd question : A gentleman, (not much acquainted with hounds) as we were hunting together the other day, said, “ I
 I “ observe,

“ observe, Sir, that some of your dogs tails stand
 “ up, and some hang down; pray which do you
 “ reckon *the best hounds?*”—Such young hounds
 as are out at the elbows, and such as are weak
 from the knee to the foot, should never be taken
 into the pack.

I find that I have mentioned a finall head, as
 one of the necessary requisites of a hound; but
 you will understand it as relative to *beauty only*;
 for as to *goodness*, I believe large-headed hounds
 are in no wise inferior. Somerville, in his descrip-
 tion of a perfect hound, makes no mention of the
 head, leaving the size of it to Phidias to deter-
 mine; he therefore must have thought it of little
 consequence. I send you his words.—

— — — “ See there with countenance blythé,
 And with a courtly grin, the fawning hound
 Salutes thee cow’ring, his wide-op’ning nose
 Upwards he curls, and his large sloe-black eyes
 Melt in soft blandishments, and humble joy;
 His glossy skin, or yellow-pied, or blue,
 In lights or shades by nature’s pencil drawn,
 Reflects the various tints; his ears and legs
 Fleckt here and there in gay enamel’d pride,
 Rival the speckled part; his rush-grown tail
 O’er his broad back bends in an ample arch;
 On shoulders clean, upright and firm he stands;
 His round cat foot, straight hams, and wide-spread thighs,
 And his low dropping chest, confess his speed,
 His strength, his wind, or on the steepy hill,

Or

Or far extended plain; in every part
 So well proportion'd, that the nicer skill
 Of Phidias himself can't blame thy choice.
 Of such compose thy pack.—

The colour, I think of little moment; and am of opinion, with our friend Foote, respecting his negro friend, that a good dog, like a good candidate, cannot be of a bad colour.

Men are too apt to be prejudiced by the sort of hound they themselves have been most accustomed to. Those who have been used to the sharp-nosed fox-hound, will hardly allow a large-headed hound to *be* a fox-hound; yet they both equally are.—Speed and beauty are the chief excellencies of the one; whilst stoutness and tenderness of nose in hunting,* are characteristic of the other. I could tell you, that I have seen very good sport with very unhandsome packs, consisting of hounds of various sizes, differing from one another as much in shape and look, as in their colour; nor could there be traced the least sign of consanguinity amongst them: considered separately, the hounds were good; as a pack of hounds they were not to be commended; nor would you be satisfied with any thing that looks so very incom-

* Il paroît que la finesse de l'odorat, dans les chiens, dépend de la grosseur plus que de la longueur du museau.

plete.—You will find nothing so essential to your sport, as, that your hounds should run well together; nor can this end be better attained, than by confining yourself, as near as you can to those of the same sort, size, and shape.

A great excellence in a pack of hounds is the head they carry; and that pack may be said to go the fastest, that can run ten miles the soonest; notwithstanding the hounds, separately, may not run so fast as many others. A pack of hounds, considered in a collective body, go fast in proportion to the excellence of their noses, and the head they carry; as that traveller generally gets soonest to his journey's end, who stops least upon the road.—Some hounds that I have hunted with, would creep all through the same hole, though they might have leapt the hedge, and would follow one another in a string, as true as a team of cart-horses.—I had rather see them, like the horses of the sun, *all a-breast*.

A friend of mine killed thirty-seven brace of foxes in one season: twenty nine of the foxes were killed without any intermission. I must tell you at the same time, that they were killed with hounds bred from a pack of harriers; nor had they, I believe, a single skirter belonging to them. There is a pack now in my neighbourhood of all sorts and sizes, which seldom miss a fox; when
they

they run, there is a long string of them, and every fault is hit off by an old southern hound. However, out of the last eighteen foxes they hunted, they killed seventeen; and I have no doubt, that as they become more complete, more foxes will escape from them. Packs which are composed of hounds of various kinds, seldom run well together, nor do their tongues harmonize; yet they generally, I think, kill most foxes; but unless I like their style of killing them, whatever may be their success, I cannot be completely satisfied. I once asked the famous Will Crane, how his hounds behaved—"very well, Sir," he reply'd; "*they never come to a fault, but they spread like a sky rocket.*"—Thus it should always be.

A famous sportsman asked a gentleman what he thought of his hounds.---"Your pack is composed, Sir," said he, "of dogs which any other man would *hang*;---they are all *skirters*."---This was taken as a compliment.---However, think not that I recommend it to you as such; for though I am a great advocate for style in the killing of a fox, I never forgive a professed skirter; where game is plenty, they are always changing, and are the loss of more foxes than they kill.

You ask me, how many hounds you ought to keep? It is a question not easy to answer—from

twenty to thirty couple, are as many, I think, as you should ever take into the field. The propriety of any number must depend upon the strength of your pack, and the country in which you are to hunt: the quantity of hounds necessary to furnish that number for a whole season, must also depend on the country *where* you hunt; as some countries lame hounds more than others. The taking out too many hounds, Mr. Somerville very properly calls *an useless incumbrance*. It is not so material what the number is, as it is that all your hounds should be steady, and as nearly as possible of equal speed.

When packs are very large, the hounds are seldom sufficiently hunted to be good. Few people choose to hunt every day; and if they did, it is not likely the weather in winter would give them leave. You would always be obliged therefore, either to take out a very large pack, or a great number of hounds must be left behind: in the first case, too many hounds in the field would probably spoil your sport; in the second, hounds that remain long without work, always get out of wind, and oftentimes become riotous. About forty couple, I think, will best answer your purpose. Forty couple of hunting hounds will enable you to hunt three, or even four times in a week; and I will venture to say, will kill more foxes than a
greater

greater number. Hounds, to be good, must be kept constantly hunted; and if I should hereafter say, a fox-hound should be above his work, it will not be a young fox-hound I shall mean; for he should seldom be left at home, as long as he is able to hunt: the old and lame, and such as are low in flesh, you should leave; and such as you are sure idleness cannot spoil.

It is a great fault to keep too many old hounds. If you choose that your hounds should run well together, you should not continue *any*, longer than five or six seasons; though there is no saying with certainty, what number of seasons a hound will last. Like us, some of them have better constitutions than others, and consequently will bear more work; and the duration of all bodies depends as much on the usage that they may meet with as on the materials of which they are made.

You ask, whether you had not better buy a complete pack at once, than be at the trouble of breeding one? Certainly you had, if such an opportunity should offer. It sometimes happens, that hounds are to be bought for less money than you could breed them. The gentleman to whom my house formerly belonged, had a most famous pack of fox-hounds. His goods, &c. were appraised and sold; which, when the appraiser had

done, he was put in mind of the hounds.—“ Well, gentlemen,” said he, “ what shall I appraise *them* “ at? a *shilling a-piece*?—“ Oh! it is too little!” “ is it so?” said the appraiser; “ why it is more “ than *I would give for them, I assure you.*”——

Hounds are not bought so cheap at *Tatterfalls*.

LET-

LETTER IV.

I AM glad that you do not disapprove the advantage I have made of my friend Somerville. I was doubtful whether you would not have censured me for it, and have compared me to some of those would-be fine gentlemen, who, to cut a figure, tack an embroidered edging on their coarse cloth.—I shall be cautious, however, of abusing your indulgence, and shall not quote my poet oftener than is necessary; but where we think the same thing, you had better take it in his words than mine.—I shall now proceed to the feeding of hounds, and management of them in the kennel.

A good feeder is an essential part of your establishment.—Let him be young and active; and have the reputation at least, of not disliking work: he should be good-tempered, for the sake of the animals entrusted to his care; and who, however they may be treated by him, cannot complain. He should be one who will strictly obey any orders that you may give; as well with regard to the management, as to the breeding of the hounds; and should not be solely under the direction of your huntsman. It is true I have seen it otherwise: I have known a pack of hounds belong, as it were, entirely to the huntsman—a

stable of horses belong to the groom—whilst the master had little more power in the direction of either, than a perfect stranger.—This you will not suffer. I know you choose to keep the supreme command in your own hands; and though you permit your servants to remonstrate, you do not suffer them to disobey.—He who allows a huntsman to manage his hounds without controul, literally keeps them for the huntsman's amusement.—You desire to know what is required of a feeder;—I will tell you as well as I can.

As our sport depends entirely on that exquisite sense of smelling, so peculiar to the hound, care must be taken to preserve it; and cleanliness is the surest means. The keeping your kennel *sweet* and *clean* cannot therefore be too much recommended to the feeder; nor should you on any account admit the least deviation from it. If he fees *you* exact, he will be so himself.—This is a very essential part of his business.—The boiling for the hounds; mixing of the meat; and getting it ready for them at proper hours, your huntsman will of course take care of; nor is it ever likely to be forgotten. I must caution you not to let your dogs eat their meat too hot; for I have known it attended with bad consequences; you should also order it to be mixed up as thick as possible.—When the feeder has cleaned his kennel in the morning, and prepared his meat, it is usual

usual for him on hunting-days, (in an establishment like your's) to exercise the horses of the huntsman and whipper-in; and in many stables it is also the feeder who looks after the huntsman's horse when he comes in from hunting, whilst the huntsman feeds the hounds. When the hounds are not out, the huntsman, and whipper-in, of course, will exercise their own horses; and that day the feeder has little else to mind but the cleaning of his kennel. Every possible contrivance has been attended to in the description I sent you, to make that part of his work easy; all the courts, except the grass-court, being bricked, and sloped on purpose. There is also plenty of water, without any trouble in fetching it; and a thorough air throughout the kennels, to assist in drying them again.---Should you choose to increase your number of servants in the stable, in that case, the business of the feeder may be confined entirely to the kennel.---There should be always two to feed hounds properly; the feeder and huntsman.

Somerville strongly recommends cleanliness in the following lines,

“ O'er all let cleanliness preside, no scraps
 Bestrew the pavement, and no half-pick'd bones,
 To kindle fierce debate, or to disgust
 That nicer sense, on which the sportsman's hope,
 And all his future triumphs must depend.
 Soon as the growling pack with eager joy

Have lapp'd their smoaking viands, morn or eve,
 From the full cistern lead the ductile streams,
 To wash thy court well-pav'd, nor spare thy pains,
 For much to health will cleanliness avail.
 Seek'st thou for hounds to climb the rocky steep,
 And brush th' entangled covert, whose nice scent
 O'er greasy fallows, and frequented roads,
 Can pick the dubious way? Banish far off
 Each noisome stench, let no offensive smell
 Invade thy wide inclosure, but admit
 The nitrous air, and purifying breeze."

So perfectly right is the poet in this, that if you can make your kennel a visit every day, your hounds will be the better for it. When I have been long absent from mine, I have always perceived a difference in their looks. I shall now take notice of that part of the management of hounds in the kennel, which concerns the huntsman as well as the feeder.---Your huntsman must always attend the feeding of the hounds, which should be drafted, according to the condition they are in. In all packs, some hounds will feed better than others; some there are that will do with less meat; and it requires a nice eye, and great attention, to keep them all in equal flesh:---it is what distinguishes a good kennel-huntsman, and has its merit.---It is seldom that huntsmen give this particular all attention it deserves: they feed their hounds in too great a hurry; and not often, I believe, take the trouble of casting their eye over them before they begin;
 and

and yet, to distinguish with any nicety, the order a pack of hounds are in, and the different degrees of it, is surely no easy task; and to be done well, requires no small degree of circumspection: you had better not expect your huntsman to be very exact; where precision is required, he will most probably fail.

When I am present myself, I make several drafts. When my huntsman feeds them, he calls them all over by their names, letting in each hound as he is called; it has its use—it uses them to their names, and teaches them to be obedient. Were it not for this, I should disapprove of it entirely; since it certainly requires more coolness and deliberation to distinguish with precision which are best entitled to precedence, than this method of feeding will admit of; and unless flesh be in great plenty, those that are called in last, may not have a taste of it. To prevent this inconvenience, such as are low in flesh, had better be all drafted off into a separate kennel;* by this means, the hounds that require *flesh*, will all have a share of it. If any be much poorer than the

* By thus separating from the rest, such as are poor, you will proceed to the feeding of your hounds with more accuracy, and less trouble; and though they be at first drafted off, in the manner above described, it is still meant that they should be let in to feed, one by one, as they answer to their names; or else, as it will frequently happen, they may be better fed than taught.

rest, they should be fed again—such hounds cannot be fed too often. If any in the pack be too fat, *they* should be drafted off, and not suffered to fill themselves. The others should eat what they will of the meat. The days my hounds have greens or sulphur, they generally are let in all together; and such as require *flesh*, have it given to them afterwards. Having a good kennel-huntsman, it is not often that I take this trouble; yet I seldom go into my kennel, but I indulge myself in the pleasure of seeing food given to such hounds, as appear to me to be in want of it. I have been told that in one kennel in particular, the hounds are under such excellent management, that they constantly are fed with the door of the feeding-yard open; and the rough nature of the fox-hound is changed into so much politeness, that he waits at the door, till he is invited in; and what perhaps is not less extraordinary, he comes out again, whether he has satisfied his hunger or not, the moment he is desired—The effect of discipline. However, as this is not absolutely necessary; and hounds may be good without it; and as I well know your other amusements will not permit you to attend to so much manœuvring, I would by no means wish you to give such power to your huntsman. The business would be injudiciously done, and most probably would not answer your expectations—The hound would be tormented *mal-à-propos*;—an animal so little deserving

ing

ing of it from our hands, that I should be sorry to disturb his hours of repose by unnecessary severity. You will perceive it is a nice affair; and I assure you I know no huntsman who is equal to it. The gentleman who has carried this matter to its most perfection, has attended to it regularly himself; has constantly acted on fixed principles, from which he has never deviated; and I believe has succeeded to the very utmost of his wishes.—All hounds, (and more especially young ones) should be called over often in the kennel;* and most huntsmen practise this lesson, as they feed their hounds.—They flog them while they feed them—and if they have not always a belly-full one way, they seldom fail to have it the other.†

* There is no better method of teaching a hound obedience; when you call him, he should approach you; when you touch him with your stick, he should follow you any where.

† “Thus we find, eat or not eat, work or play, whipping is always in season.” (vide Monthly Review) The critic treats this passage with great severity. He would have spared it, without doubt, had he understood that it was introduced on purpose to correct the abuse of kennel discipline. Unacquainted, as the Reviewer seems to be with the subject, it is no wonder that he should mistake a meaning, perhaps rather unfairly stated by the author, in favor of that humanity he is supposed so much to want.—Hounds are called in to feed, one by one, and such only are corrected, as come uncalled for: nor is correction unjust, so long as it shall fall on the disobedient only. Obedience is an useful lesson, and though it cannot be *practised* too often, it should be *taught* them at a more idle time.

It is not, however, my intention to oppose so general a practice, in which there may be some utility; I shall only observe, that it should be used with discretion, lest the whip should fall heavily in the kennel on such as never deserve it in the field.

My hounds are generally fed about eleven o'clock;* and when I am present myself, I take the same opportunity to make my draft for the next day's hunting. I seldom, when I can help it, leave this to my huntsman, though it is necessary he should be present when the draft is made, that he may know what hounds he has out.

* Having found it necessary to alter my method of feeding hounds, it may not be improper to take notice of it here. They are now fed at eight o'clock, instead of eleven. Their first feed is of barley and oatmeal mixed, an equal quantity of each. Flesh is afterwards mixed up with the remainder for such hounds as are poor, who are then drafted off into another kennel, and let in to feed all together. When the flesh is all eaten, the pack are again let in, and are by this means cheated into a second appetite. At three o'clock those that are to hunt the next day are drafted into the hunting kennel; they are then let into the feeding-yard, where a small quantity of oatmeal (about three buckets) is prepared for them; not mixed up thin, as mentioned in page 45, but mixed up thick. Such as are tender, or bad feeders, have a handful of boiled flesh given to them afterwards. When they are not to hunt the next day, they are fed once only—at eleven o'clock.

It is a bad custom to use hounds to the boiling-house; it is apt to make them nice, and may prevent them from ever eating the kennel-meat. What they have, should always be given them in the feeding-yard, and for the same reason, though it be flesh, it should have some meal mixed with it.

If your hounds be low in flesh, and have far to go to cover, they may all have a little thin lap again in the evening; but this should never be done if you hunt early.* Hounds, I think, should be sharp-set before hunting; they run the better for it.†

If many of your hounds, after long rest, should be too fat,‡ by feeding them for a day or two on thinner meat than you give the others, it will be found, I believe, to answer better than the usual method of giving them the same meat, and stinting them in the quantity of it.

* Hounds that are tender feeders cannot be fed too late, or with meat too good.

† Vid. Note, page 44.

‡ Hounds that rest, should not be suffered to become fat.— It would be accounting very badly for the fatness of a hound, to say he is fat, because he has not worked lately, since he ought to have been kept lower on that account.

If

If your hounds be not walked out, they should be turned into the grass-court to empty themselves after they have been fed, it will contribute not a little to the cleanliness of the kennel.

I have heard that it is a custom in some kennels to shut up the hounds for a couple of hours after they come in from hunting, before they are fed; and that other hounds are shut up with them, to lick them clean.* My usual way is to send on a whipper-in before them, that the meat may be gotten ready against they come, and they are fed *immediately*: having filled their bellies, they are naturally inclined to rest. If they have had a severe day, they are fed again some hours after.† As to the method above-mentioned, it may be more convenient perhaps to have the hounds all together: but I cannot think it necessary, for the reason that is given; and I should apprehend a parcel of idle hounds, shut up amongst such as are tired and inclined to rest,

* If hounds be shut up, as soon as they come in from hunting, they will not readily leave the benches afterwards; for if they be much fatigued, they will prefer rest to food.

† My hounds are generally fed twice on the days they hunt. Some will feed better the second time than the first; besides, the turning them out of the lodging-house refreshes them; they stretch their limbs; empty their bodies; and, as during this time their kennel is cleaned out, and litter shaken up, they settle themselves better on the benches afterwards.

would

would disturb them more than all their licking would make amends for. When you feed them twice, keep them separate till after the second feeding; it would be still better were they not put together till the next morning.

Every day, when hounds come in from hunting, they ought carefully to be looked over, and invalids should immediately be taken care of.* Such as have sore feet, should have them well washed out with brine, or pot liquor. If you permit those hounds that are unable to work to run about your house, it will be of great service to them. Such as are ill, or lame, ought to be turned out into another kennel; it will be more easy to give them *there* the attention they may require, both as to medicine and food.

Every Thursday during the hunting season, my hounds have one pound of sulphur given them in their meat; and every Sunday throughout the year they have plenty of greens boiled up with it: I find it better to fix the days, as it is then less liable to be forgotten. I used to give them the wash from the kitchen, but I found it

* Hounds that come home lame should not be taken out the next hunting day, since they may appear sound without being so. At the beginning of the season the eyes of hounds are frequently injured; such hounds should not be hunted, and if their eyes continue weak they should lose a little blood.

made them thirsty, and it is now omitted in the hunting season. A horse fresh killed is an excellent meal for hounds after a very hard day; but they should not hunt till the third day after it. The bones broken are good food for poor hounds, as there is great proof in them. Sheep trotters are very sweet food, and will be of service when horse-flesh is not to be had. Bullocks' bellies may be also of some use, if you can get nothing else. Oatmeal, I believe, makes the best meat for hounds; barley is certainly the cheapest; and in many kennels they give barley on that account; but it is heating, does not mix up so well, nor is there so much proof in it as in oatmeal. If mixed, an equal quantity of each, it will then do very well, but barley alone will not. Much also depends on the goodness of the meal itself, which is not often attended to. If you do not use your own, you should buy a large quantity of it any time before harvest, and keep it by you: there is no other certainty, I believe; of having it *old*; which is more material than, perhaps, you are aware of. I have heard that a famous Cheshire huntsman feeds his hounds with wheat; which he has found to be the best food. He gives it them with the bran; it would cause no little disturbance in many neighbourhoods, if other sportsmen were to do the same.

I am not fond of *bleeding* hounds, unless they want it; though it has long been a custom in my kennel to *physic* them twice a year; after they leave off hunting, and before they begin. It is given in hot weather, and at an idle time. It cools their bodies, and without doubt is of service to them. If a hound be in want of *physic*, I prefer giving it in balls.* It is more easy to give in this manner the quantity he may want, and you are more certain that he takes it. In many kennels, they also bleed them twice a year, and some people think that it prevents madness. The anointing of hounds, or *dressing* them, as huntsmen call it, makes them fine in their coats: it may be done twice a year, or oftner, if you find it necessary. As I shall hereafter have occasion to write on the diseases of hounds, and their cures, I will send you at the same time a receipt for this purpose. During the summer months, when my hounds do not hunt, they have seldom any flesh allowed them, and are kept low, contrary, I believe, to the usual practice of most kennels, where mangy hounds in summer are but too often seen. Huntsmen sometimes content themselves with checking this disorder, when, with less trouble, perhaps, they

* One pound of antimony, four ounces of sulphur, and syrup of buckthorn q. f. to give it the consistency of a ball. Each ball weighs about seven drachms.

might prevent it. A regular course of whey and vegetables during the hot months must, certainly, be wholesome, and is, without doubt, the cause that a mangy hound is an unusual sight in my kennel. Every Monday and Friday my hounds go for whey till the hunting season begins; are kept out several hours, and are often made to swim through rivers during the hot weather. After the last physic, and before they begin to hunt, they are exercised on the turnpike road, to harden their feet, which are washed with strong brine, as soon as they come in. Little straw is necessary during the summer; but when they hunt they cannot have too much, or have it changed too often. In many kennels they do not boil for the hounds in summer, but give them meal only; in mine it is always boiled; but with this difference, that it is mixed up thin, instead of thick. Many give spurge-laurel in summer, boiled up in their meat; as I never use it, I cannot recommend it. The physic I give is two pounds of sulphur, one pound of antimony, and a pint and a half of syrup of buckthorn, for about forty couple of hounds.* In the winter season, let your hounds be shut up warm at night. If any hounds, after hunting, be missing, the straw-house door should be left open; and if

* Vide page 49, where it is recommended that such hounds as require physic should be physicked separately.

They have had a hard day, it may be as well to leave some meat there for them.

I have inquired of my feeder, who is a good one, (and has had more experience in these matters than any one you perhaps may get) how he mixes up his meat. He tells me, that in his opinion, oatmeal and barley mixed, an equal quantity of each, make the best meat for hounds. The oatmeal he boils for half an hour, and then puts out the fire, puts the barley into the copper, and mixes both together. I asked him why he boiled one and not the other—he told me, boiling, which made oatmeal thick, made barley thin; and that when you feed with barley only, it should not be put into the copper, but be scalded with the liquor, and mixed up in a bucket. I find there is in my kennel a large tub on purpose, which contains about half a hoghead.

You little think, perhaps, how difficult it is to be a good kennel huntsman, nor can you, as yet, know the nicety that is required to feed hounds properly. You are not aware that some hounds will hunt best when fed late; others, when fed early: that some should have but little; that others cannot have too much. However, if your huntsman observe the rules I have here laid down, his hounds will not do much amiss; but should you at any time wish to *rencherir* upon the

matter, and feed each particular hound so as to make the most of him, you must learn it of a gentleman in Leicestershire, to whom the noble science of fox-hunting is more beholden than to any other. I shall myself say nothing further on the subject; for as your huntsman will not have the sense of the gentleman I allude to, nor *you* perhaps his patience, an easier method I know will suit you best. I shall only advise you, while you endeavour to keep your hounds in good order, not to let them become *too fat*; it will be impossible for them to run, if they be. A fat-alderman would cut a mighty ridiculous figure were he inclined to run a race.

LETTER V.

THERE is an active vanity in the minds of men which is favourable to improvement, and in every pursuit, while something remains to be attained, so long will it afford amusement; you, therefore, will find pleasure in the breeding of hounds, in which expectation is never completely satisfied, and it is on the sagacious management of this business that all your success will depend. Is it not extraordinary that no other country should equal us in this particular, and that the very hounds procured from hence should degenerate in another climate?

“ In thee alone, fair land of liberty!
Is bred the perfect hound, in scent and speed
As yet unrivall'd, while in other climes
Their virtue fails, a weak degen'rate race.”

SOMERVILE.

Happy climate for sportsmen! where nature seems as it were to give them an exclusive privilege of enjoying this diversion. To preserve, however, this advantage, care should be taken in the breed; I shall, therefore, according to your desire, send you such rules as I observe myself. Consider the size, shape, colour, constitution, and natural disposition of the dog you breed from, as well as the

the fineness of his nose, his stoutness, and method of hunting. On no account breed from one that is not *stout*, that is not *tender-nosed*, or that is either a *babbler*,* or a *skirter*.

“ Observe with care his shape, fort, colour, size:
 Nor will sagacious huntsmen less regard
 His inward habits; the vain babbler shun,
 Ever loquacious, ever in the wrong.
 His foolish offspring shall offend thy ears
 With false alarms and loud impertinence.
 Nor less the shifting cur avoid, that breaks
 Illusive from the pack; to the next hedge
 Devious he strays, there ev’ry muse he tries,
 If haply then he crosses the streaming scent,
 Away he flies vain-glorious; and exults
 As of the pack supreme and in his speed
 And strength unrivall’d. Lo! cast far behind,
 His vex’d associates pant, and lab’ring strain
 To climb the steep ascent. Soon as they reach
 Th’ insulting boaster, his false courage fails,
 Behind he lags, doom’d to the fatal noose,
 His master’s hate, and scorn of all the field.
 What can from such be hop’d, but a base brood
 Of coward curs, a frantic, vagrant race?”

SOMERVILE.

It is the judicious cross that makes the pack complete. † The faults and imperfections in one breed,

* Babbling is one of the worst faults that a hound can be guilty of, it is constantly increasing, and is also catching. This fault, like many others, will sometimes run in the blood.

† I have seen fox-hounds that were bred out of a Newfoundland
 land

breed, may be rectified from another; and if this be properly attended to, I see no reason why the breeding of hounds may not improve, till improvement can go no further. If you find a cross hit, pursue it.* Never put an old dog to an old bitch. Be careful that they be healthy which you breed from, or you are not likely to have a healthy offspring. Should a favourite dog skirt a little, put him to a thorough line-hunting bitch, and such a cross may succeed. My objection to the breeding from such a hound is, that as skirting is what most fox-hounds acquire from practice, it had better not be made natural to them. A very famous sportsman has told me, that he frequently breeds from brothers and sisters. As I should be very unwilling to urge any thing in opposition to such authority, you had better try it; and if it succeed in hounds, it is more I believe than it usually does in other animals. A famous cocker assured a friend of mine, that the third generation (which he called

land bitch and a fox-hound dog: they are monstrously ugly—are said to give their tongues sparingly, and to tire soon. The experiment has not succeeded; the cross most likely to be of service to a fox-hound is the beagle. I am well convinced that a handsome, bony, tender-nosed, stout beagle would, occasionally, be no improper cross for a high-bred pack of fox-hounds.

* After the first season, I breed from all my young dog-hounds who have beauty and goodness to recommend them, to see what whelps they get.

a nick) he had found to succeed very well, but no nearer: as I have neither tried one nor the other, I cannot speak with any certainty about them.

Give particular orders to your feeder to watch over the bitches with a cautious eye, and separate such as are going to be proud, before it be too late. The advances they make frequently portend mischief as well as love; and, if not prevented in time, will not fail to set the whole kennel together by the ears, and may occasion the death of your best dogs: care only can prevent it.*

“ Mark well the wanton females of thy pack,
That curl their taper tails, and frisking court
Their pye-bald mates enamour'd; their red eyes
Flash fires impure; nor rest, nor food they take,
Goaded by furious love. In sep'rate cells
Confine them now, lest bloody civil wars
Annoy thy peaceful state.——”

SOMERVILLE.

I have known huntsmen perfectly ignorant of the breed of their hounds, from inattention in this particular; and I have also known many good dogs fall a sacrifice to it.

* When the bitches are off their heat, they should be suffered to run about the house a day or two before they are taken out to hunt.

The

The earlier in the year you breed the better: January, February, and March, are the best months. Late puppies seldom thrive; if you have any such, put them to the best walks.* When the bitches begin to get big, let them not hunt any more: it proves frequently fatal to the puppies; sometimes to the bitch herself; nor is it safe for them to remain much longer in the kennel. If one bitch have many puppies, more than she can well rear, you may put some of them to another bitch; or if you destroy any of them, you may keep the best coloured. They sometimes will have an extraordinary number: I have known an instance of one having fifteen; and a friend of mine, whose veracity I cannot doubt, has assured me that a hound in his pack brought forth sixteen, all alive. When you breed from a very favourite sort, and can have another bitch warded at the same time, it will have this advantage, it will enable you to save all the puppies. Give particular orders that the bitches be well fed with flesh; they should also have plenty of milk, nor should the puppies be taken from them till they are able to take care of themselves: they will soon learn to lap milk, which will relieve the mother. The bitches, when their puppies are taken away from them,

* Of the early whelps I keep five or six, of the late ones only two or three.

should be physicked; they should have three purging balls given them, one every other morning, and plenty of whey the intermediate day.— If a bitch bring only one or two puppies, and you have another bitch that will take them, by putting the puppies to her, the former will be soon fit to hunt again; she should, however, be physicked first; and if her dugs be anointed with brandy and water, it will also be of service. The distemper makes dreadful havoc with whelps at their walks; greatly owing, I believe, to the little care that is taken of them there. I am in doubt whether it might not be better to breed them up yourself, and have a kennel on purpose. You have a large orchard, paled in, which would suit them exactly; and what else is wanted might easily be obtained. There is, however, an objection that perhaps may strike you—If the distemper once get amongst them, they must all have it: yet, notwithstanding *that*, as they will be constantly well fed, and will lie warm, I am confident it would be the saving of many lives. If you should adopt this method, you must remember to use them early to go in couples; and when they become of a proper age, they must be walked out often: for should they remain confined, they would neither have the shape, health, or understanding, which they ought to have. When I kept harriers, I bred up some of the puppies at a distant kennel; but having no servants

wants there to exercise them properly, I found them much inferior to such of their brethren as had the luck to survive the many difficulties and dangers they had undergone at their walks; these were afterwards equal to any thing, and afraid of nothing; whilst those that had been nursed with so much care were weakly and timid, and had every disadvantage attending private education.

I have often heard as an excuse for hounds not hunting a cold scent, that they were *too high bred*; I confess, I know not what that means: but this I know, that hounds are frequently *too ill bred* to be of any service. It is judgment in the breeder, and patience afterwards in the huntsman, that make them hunt.

Young hounds are commonly named when first put out, and sometimes indeed ridiculously enough; nor is it easy, when you breed many, to find suitable or harmonious names for all; particularly as it is usual to name all the whelps of one litter with the same letter, which (to be systematically done) should also be the initial letter of the dog that got them, or the bitch that bred them. A baronet of my acquaintance, a literal observer of the above rule, sent three young hounds of one litter to a friend, all their names beginning, as *he said*, with the letter G—*Gowler, Govial, and Galloper.*

It

It is indeed of little consequence what huntsmen call their hounds; yet if you dislike an unmeaning name, would it not be as well to leave the naming of them till they are brought home? They soon learn their names, and a shorter list would do. Damons and Delias would not then be necessary; nor need the sacred names of Titus and Trajan be thus degraded. It is true, there are many odd names which custom authorises; yet I cannot think, because some drunken fellow or other has christened his dog Tipler, or Tapster, that there is the least reason to follow the example. Pipers and fiddlers, for the sake of their music, we will not object to; but tiplers and tapsters your kennel will be much better without.

However extraordinary you may think it, I can assure you I have myself seen a *white* Gipsy, a *grey* Ruby, a *dark* Snowball, and a Blueman of any colour but *blue*. The huntsman of a friend of mine being asked the name of a young hound, said, it was *Lyman*. “Lyman!” said his master; “why, James, what does Lyman mean?”—“Lord, Sir!” replied James, “what does *any thing* mean?”—A farmer, who bred up two couple of hounds for me, whose names were Merryman and Merrylafs, Ferryman and Furious, upon my inquiring after them, gave this account: “Merryman and Merrylafs are both
“ dead,

“ dead, but Ferryman, Sir, is a fine dog, and “ so is *Ferrylafs.*” Madam, an usual name among hounds, is often, I believe, very disrespectfully treated: I had an instance of it the other day in my own huntsman, who, after having rated Madam a great deal, to no purpose, (who, to confess the truth, was much given to do otherwise than she should) flew into a violent passion, and hallooed out, as loud as he could—
 “ *Madam, you d—d bitch!*”

As you desire a list of names, I will send you one. I have endeavoured to class them according to their different genders; but you will perceive some names may be used indiscriminately for either. It is not usual, I believe, to call a pointer Ringwood, or a greyhound Harmony; and such names as are expressive of speed, strength, courage, or other natural qualities in a hound, I think most applicable to them. Damons and Delias I have left out; the bold Thunder and the brisk Lightning, if you please, may supply their places; unless you prefer the method of the gentleman I told you of, who intends naming his hounds from the p—ge; and, I suppose, he at the same time will not be unmindful of the p—y c—rs.

If you mark the whelps in the side, (which is called branding them) when they are first put
 out,

out, (or perhaps it may be better done after they have been out some time) it may prevent their being stolen.

When young hounds are first taken in, they should be kept separate from the pack; and as it will happen at a time of the year, when there is little or no hunting, you may easily give them up one of the kennels and grass-court adjoining. Their play ends frequently in a battle; it therefore is less dangerous where all are equally matched. What Somerville says on this subject is exceedingly beautiful:

“ But here with watchful and observant eye,
Attend their frolics, which too often end
In bloody broils and death. High o'er thy head
Wave thy resounding whip, and with a voice
Fierce-menacing o'er-rule the stern debate,
And quench their kindling rage; for oft in sport
Begun, combat ensues, growling they snarl,
Then on their haunches rear'd, rampant they seize
Each other's throats, with teeth, and claws, in gore
Besmear'd, they wound, they tear, till on the ground,
Panting, half-dead the conquer'd champion lies:
Then sudden all the base ignoble crowd
Loud-clam'ring seize the helpless worried wretch,
And thirsting for his blood, drag diff'rent ways
His mangled carcass on th' ensanguin'd plain.
O breasts of pity void! t' oppress the weak,
To point your vengeance at the friendless head,
And with one mutual cry insult the fall'n!
Emblem too just of man's degenerate race.”

If you find that they take a dislike to any particular hound, the safest way will be to remove him; or it is probable they will kill him at last. When a feeder hears the hounds quarrel in the kennel, he halloos to them to stop them. He then goes in amongst them, and flogs every hound he can come near. How much more reasonable, as well as more efficacious, it would be, were he to see which were the combatants before he speaks to them. Punishment would then fall as it ought, on the guilty only. In all packs there are some hounds more quarrelsome than the rest; and it is to them we owe all the mischief that is done. If you find chastisement cannot quiet them, it may be prudent to break their holders; for since they are not necessary to them for the meat they have to eat, they are not likely to serve them in any good purpose.

Young hounds ought to be fed twice a day, as they seldom take kindly at first to the kennel-meat, and the distemper is most apt to seize them at this time. It is better not to round them till they are thoroughly settled; nor should it be put off till the hot weather, for then they would bleed too much.* If any of the dogs be thin
over

* It may be better, perhaps, to round them at their quarters, when about six months old; should it be done sooner, it would make their ears tuck up. The tailing of them is usually done before

over the back, or any more quarrelsome than the rest, it will be of use to cut them: I also spay such bitches as I think I shall not want to breed from; they are more useful, are stouter, and are always in better order: besides, it is absolutely necessary if you hunt late in the spring; or your pack will be very short for want of it. It may be right to tell you, that the latter operation does not always succeed, it will be necessary, therefore, to employ a skilful person, and one on whom you can depend; for if it be ill done, though they cannot have puppies, they will go to heat notwithstanding, of which I have known many instances, and that, I apprehend, would not answer your purpose at any rate. They should be kept low for several days before the operation is performed, and must be fed on thin meat for some time after.

You ask me what number of young hounds you should breed to keep up your stock? it is a question, I believe, no man can answer. It depends altogether on contingencies. The deficiencies of one year must be supplied the next. I should apprehend from thirty to thirty-five couple

before they are put out; it might be better, perhaps, to leave it till they are taken in. Dogs must not be rounded at the time they have the distemper upon them; the loss of blood would weaken them too much.

of old hounds, and from eight to twelve couple of young ones would, one year with another, best suit an establishment which you do not intend should much exceed forty couple. This rule you should at the same time observe—never to part with an useful old hound, or enter an unhandſome young one.

I would adviſe you in breeding, to be as little prejudiced as poſſible in favour of your own ſort; but ſend your beſt bitches to the beſt dogs, be they where they may. Thoſe who breed only a few hounds may by chance have a good pack, whiſt thoſe who breed a great many (if at the ſame time they underſtand the buſineſs) reduce it to a certainty. You ſay, you wiſh to ſee your pack as complete as Mr. Meynell's: believe me, my good friend, unleſs you were to breed as many hounds, it is totally impoſſible. Thoſe who breed the greateſt number of hounds have a right to expect the beſt pack; at leaſt it muſt be their own fault if they have it not.

L E T

LETTER VI.

AFTER the young hounds have been rounded, and are well reconciled to the kennel, know the huntsman, and begin to know their names, they should be put into couples, and walked out amongst sheep.

If any be particularly snappish and troublesome, you should leave the couples loose about their necks in the kennel, till you find they are more reconciled to them. If any be more stubborn than the rest, you should couple them to old hounds rather than to young ones; and you should not couple *two dogs* together when you can avoid it. Young hounds are awkward at first; I should, therefore, advise you to send out a few only at a time with your people on foot; they will soon afterwards become handy enough to follow a horse; and care should be taken that the couples be not too loose, lest they should slip their necks out of the collar, and give trouble in catching them again.

When they have been walked often in this manner amongst the sheep, you may then uncouple
a few

a few at a time, and begin to chastise such as offer to run after them; but you will soon find that the cry of *ware sheep* will stop them sufficiently without the whip; and the less this is used the better. With proper care and attention you will soon make them ashamed of it, but if once suffered to taste the blood, you may find it difficult to reclaim them. Various are the methods used to break such dogs from sheep; some will couple them to a ram, but that is breaking them with a vengeance; you had better hang them.—A late lord of my acquaintance, who had heard of this method, and whose whole pack had been often guilty of killing sheep, determined to punish them, and to that intent put the largest ram he could find into his kennel. The men with their whips and voices, and the ram with his horns, soon put the whole kennel into confusion and dismay, and the hounds and the ram were then left together. Meeting a friend soon after, “come,” says he, “come with me to the kennel, and see what rare sport the ram makes among the hounds; the old fellow lays about him stoutly, I assure you—egad he trims them—there is not a dog dares look him in the face.”—His friend, who is a compassionate man, pitied the hounds exceedingly, and asked, if he was not afraid that some of them might be spoiled:—“No, d—n them,” said he, “they deserve it, and let them suffer.”—On they went—all was quiet

quiet—they opened the kennel door, but saw neither ram nor hound. The ram by this time was entirely eaten up, and the hounds having filled their bellies, were retired to rest.

It without doubt is best when you air your hounds to take them out separately; the old ones one day, another day the young;* but as I find your hounds are to have their whey at a distant dairy, on those days, both old and young may be taken out together, observing only to take the young hounds in couples when the old ones are along with them. Young hounds are always ready for any kind of mischief, and idleness might make even old ones too apt to join them in it. Besides, should they break off from the huntsman, the whipper-in is generally too ill mounted at this season of the year easily to head and bring them back. Run no such risk. My hounds were near being spoiled by the mere accident of a horse's falling. The whipper-in was thrown from his horse; the horse ran away, and the whole pack followed: a flock of sheep, which were at a little distance, took fright, began to run, and the hounds pursued them. The most vicious set on the rest, and several sheep were soon

* It would be still better to take out your hounds every day, the old and young separately, when it can be done without inconvenience; when it cannot, a large grass-court will partly answer the same purpose.

pulled down and killed. I mention this to shew you what caution is necessary whilst hounds are idle; for though the fall of the horse was not to be attributed to any fault of the man, yet had the old hounds been taken out by themselves, or had all the young ones been in couples, it is probable so common an accident would not have produced so extraordinary an effect.

It is now time to stoop them to a scent.—You had better enter them at their own game—it will save you much trouble afterwards. Many dogs, I believe, like that scent best which they were first blooded to; but be that as it may, it is certainly most reasonable to use them to that which it is intended they should hunt. It may not be amiss, when they first begin to hunt, to put light collars on them. Young hounds may easily get out of their knowledge; and thy ones, after they have been much beaten, may not chuse to return home. Collars, in that case, may prevent their being lost.

You say, you should not like to see your young hounds run a trail-scent. I have no doubt that you would be glad to see them run over an open down, where you could so easily observe their action and their speed. I cannot think the doing of it once or twice could hurt your hounds; and and yet as a sportsman, I dare not recommend it
to

to you. All that I shall say of it is, that it would be less bad than entering them *at hare*. A cat is as good a trail as any; but on no account should any trail be used after your hounds are stooped to a scent.

I know an old sportsman who enters his young hounds first at a cat, which he drags along the ground for a mile or two, at the end of which he turns out a badger, first taking care to break his teeth; he takes out about two couple of old hounds along with the young ones to hold them on. He never enters his young hounds but at vermin; for he says, “*train up a child in the way he should go, and when he is old he will not depart from it.*”

Summer hunting, though useful to young hounds, is prejudicial to old ones; I think, therefore, you will do well to reserve some of the best of your draft-hounds to enter your young hounds with, selecting such as are most likely to set them a good example. I need not tell you they should not be skilters; but, on the contrary, should be fair hunting hounds, such as love a scent, and that hunt closest on the line of it; it will be necessary that some of them should be good finders, and all must be steady: thus you procure for your young hounds the best instructors, and at the same time prevent two evils, which would necessarily

necessarily ensue, were they taught by the whole pack; one, that of corrupting, and getting into scrapes, such as are not much wiser than themselves; and the other, that of occasioning much flogging and rateing, which always shies and interrupts the hunting of an old hound. An old hound is a sagacious animal, and is not fond of trusting himself in the way of an enraged whipper-in, who, as experience has taught him, can flog severely, and can flog unjustly.—By attending to this advice, you will improve one part of your pack without prejudice to the other; whilst such as never separate their young hounds from the old, are not likely to have any of them steady.

You ask, at what time you should begin to enter your young hounds?—that question is easily answered; for you certainly should begin with them *as soon as you can*. The time must vary in different countries: in corn countries it may not be possible to hunt till after the corn is cut; in grass countries you may begin sooner; and in woodlands you may hunt as soon as you please. If you have plenty of foxes, and can afford to make a sacrifice of some of them for the sake of making your young hounds steady, take them first where you have least riot, putting some of the steadiest of your old hounds amongst them. If in such a place you are fortunate enough to find a litter of foxes you, may assure yourself you will

have but little trouble with your young hounds afterwards.

Such young hounds as are most riotous at first, generally speaking, I think, are best in the end. A gentleman in my neighbourhood was so thoroughly convinced of this, that he complained bitterly of a young pointer to the person who gave it him, because he had done *no mischief*. However, meeting the same person some time after, he told him the dog he believed would prove a good one at last.—“How so?” replied his friend, “it was but the other day that you said he was good for nothing.”—“*True; but he has killed me nineteen turkies since that.*”

If, owing to a scarcity of foxes, you should stoop your hounds at hare, let them by no means have the blood of her; nor, for the sake of consistency, give them much encouragement. Hare-hunting has one advantage—hounds are chiefly in open ground, where you can easily command them; but, notwithstanding that, if foxes be in tolerable plenty, keep them to their own game, and forget not the advice of the old sportsman.

Frequent *hallooing* is of use with young hounds; it keeps them forward, prevents their being lost, and hinders them from hunting after the rest. The oftener therefore a fox is seen and hallooed, the
better;

better ; it serves to let them in, makes them eager, makes them exert themselves, and teaches them to be handy. I must tell you, at the same time I say this, that I by no means approve of much hallooing to old hounds ; and though I frequently am guilty of it myself, it is owing to my spirits, which lead me into an error which my judgment condemns. It is true, there is a time when hallooing is of use ; a time when it does hurt ; and a time when it is perfectly indifferent : but it is long practice, and great attention to hunting, that must teach you the application.

Hounds, at their first entering, cannot be encouraged too much. When they become handy, love a scent, and begin to know what is *right*, it will be soon enough to chastise them for doing *wrong* ; in which case, one severe beating will save a deal of trouble. You should recommend to your whipper-in, when he flogs a hound, to make use of his voice as well as his whip ; and let him remember, that the smack of the whip is often of as much use as the lash, to one that has felt it. If any be very unsteady, it will not be amiss to send them out by themselves, when the men go out to exercise their horses. If you have hares in plenty, let some be found sitting, and turned out before them ; and you will soon find the most riotous will not run after them. If you intend them to be made steady from deer, they

should often see deer, and they will not regard them; and if, after a probation of this kind, you turn out a cub before them, with some old hounds to lead them on, you may assure yourself they will not be unsteady long; for as Somerville rightly observes,

“ Easy the lesson of the youthful train,
When instinct prompts, and when example guides.”

Flogging hounds in the kennel, the frequent practice of most huntsmen, I hold in abhorrence: it is unreasonable, unjust, and cruel; and carried to the excess we sometimes see it, is a disgrace to humanity. Hounds that are old offenders, that are very riotous, and at the same time very cunning, it may be difficult to catch: such hounds may be excepted—they deserve punishment wherever taken, and you should not fail to give it them *when you can*.—This you will allow is a particular case, and necessity may excuse it—but let not the peace and quiet of your kennel be often thus disturbed. When your hounds offend, punish them:—when caught in the fact, then let them suffer—and if you be severe, at least be just.

When your young hounds stoop to a scent, are become handy, know a rate and stop easily, you may then begin to put them into the pack, a few only at a time; nor do I think it advisable to begin
this,

this, till the pack have been out a few times by themselves, and are gotten well in blood. I should also advise you to take them the first day where they are most sure to find; as long rest makes all hounds riotous, and they may do that *en gaieté de cœur*, which they would not think of at another time. Let your hounds be low in flesh, when you begin to hunt; the ground is generally hard at that season, and they are liable to be shaken.

If your covers be large, you will find the strait horn of use, and I am sorry to hear that you do not approve of it.—You ask me why I like it?—not as a *musician*, I can assure you.—It signifies little in our way what the noise is, as long as it is understood.

LETTER VII.

UNLESS I had kept a regular journal of all that has been done in the kennel from the time when my young hounds were first taken in, to the end of the last season, it would be impossible, I think, to answer all the questions which in your last letter you ask concerning them. I wish that a memory, which is far from a good one, would enable me to give the information you desire. If I am to be more circumstantial than in my former letter, I must recollect, as well as I can, the regular system of my own kennel; and if I am to write from memory, you will, without doubt, excuse the want of the *lucidus ordo*:—it shall be my endeavour, that the information these letters contain, shall not mislead you.

You wish me to explain what I mean by hounds being *handy*—it respects their readiness to do whatever is required of them; and particularly, when cast, to turn easily which way the huntsman pleases.*

* My hounds are frequently walked about the courts of the kennel, the whipper-in following them, and rating them after the huntsman; this, and the sending them out, (after they have been fed,) with the people on foot, contribute greatly to make them handy.

I was

I was told the other day by a sportsman, that he considers the management of hounds as a regular system of education, from the time when they are first taken into the kennel: I perfectly agree with this gentleman; and am well convinced, that if you expect sagacity in your hound when he is old, you must be mindful what instruction he receives from you in his youth; for as he is of all animals the most docile, he is also most liable to bad habits. A diversity of character, constitution, and disposition, are to be observed amongst them; which, to be made the most of, must be carefully attended to, and differently treated. I do not pretend to have succeeded in it myself; yet you will perceive, perhaps, that I have paid some attention to it.

I begin to hunt with my young hounds in August. The employment of my huntsman the preceding months is to keep his old hounds healthy and quiet, by giving them proper exercise; and to get his young hounds forward.* They are called over often in the kennel; it uses them to their names, to the huntsman, and to the whipper-in.

* Nothing will answer this purpose so well as taking them out often. Let your huntsman lounge about with them---nothing will make them so handy. Let him get off his horse frequently, and encourage them to come to him,---nothing will familiarize them so much.---Too great restraint will oftentimes incline hounds to be riotous.

They are walked out often among sheep, hares, and deer: it uses them to a rate. Sometimes he turns down a cat before them, which they hunt up to, and kill: and, when the time of hunting approaches, he turns out badgers or young foxes, taking out some of the steadiest of his old hounds to lead them on—this teaches them to hunt. He draws small covers and furze brakes with them, to use them to a halloo, and to teach them obedience. If they find improper game, and hunt it, they are stopped and brought back; and as long as they will stop at a rate, they are not chastised. Obedience is all that is required of them, till they have been sufficiently taught the game they are to pursue. An obstinate deviation from it afterwards is *never pardoned*. It is an observation of the Marchese Beccaria, that “La certezza di un
 “ castigo, benchè moderato, fara sempre una
 “ maggiore impressione, che non il timore di un
 “ altro piu terribile, unito colla speranza, della
 “ ’impunita.”

When my young hounds are taken out to air, my huntsman takes them into that country in which they are to hunt. It is attended with this advantage; they acquire a knowledge of the country, and when left behind at any time, cannot fail to find their way home more easily.

When .

When they begin to hunt, they are first taken into a large cover of my own, which has many ridings cut in it; and where young foxes are turned out every year on purpose for them. *Here* they are taught the scent they are to follow, are encouraged to pursue it, and are stopped from every other. *Here* they are blooded to fox. I must also tell you that as foxes are plentiful in this cover, the principal earth is not stopped, and the foxes are checked back, or some of them let in, as may best suit the purpose of blooding. After they have been hunted a few days in this manner, they are then sent to more distant covers, and more old hounds are added to them; there they continue to hunt till they are taken into the pack, which is seldom later than the beginning of September; for by that time they will have learned what is required of them, and they seldom give much trouble afterwards.* In September I begin to hunt in earnest, and after the old hounds have killed a few foxes, the young hounds are put into the pack, two or three couple at a time, till all have hunted. They are then divided; and as I seldom have occasion to take in more than nine or ten couple, one half are taken out one day, the other half the next, till all are steady.

* Sport in fox-hunting cannot be said to begin before October, but in the two preceding months, a pack is either made or marred.

Two other methods of entering young hounds I have practised occasionally, as the number of hounds have required; for instance, if that number be considerable, (fifteen or sixteen couple,) I make a large draft of my steadiest hounds, which are kept with the young hounds in a separate kennel, and are hunted with them all the first part of the season. This, when the old hounds begin to hunt, makes two distinct packs, and is always attended with great trouble and inconvenience. Nothing hurts a pack so much as to enter many young hounds, since it must be considerably weakened by being robbed of those which are the most steady; and yet young hounds can do nothing without their assistance. Such, therefore, as constantly enter their young hounds in this manner, will, sometimes at least, have two indifferent packs, instead of one good one.

In the other method the young hounds are well awed from sheep, but never stooped to a scent, till they are taken out with the pack; they are then taken out a few only at a time; and if your pack be perfectly steady, and well manned, may not give you much trouble. The method I first mentioned, is that I most commonly practise, being most suitable to the number of young hounds I usually enter—nine or ten couple: if you have fewer, the last will be most convenient. The one which requires two distinct packs, is on too ex-

tenfive a plan to fuit your eftablifhment, requiring more horfes and hounds than you intend to keep.*

Though I have mentioned, in a former letter, from eight to twelve couple of young hounds, as a fufficient number to keep up your pack to its prefent eftablifhment; yet it is always beft to have a referve of a few couple more than you want, in cafe of accidents: fince from the time you make your draft, to the time of hunting, is a long period; and their exiftence at that age and feafon very precarious: befides, when they are fafe from the diforder, they are not always fafe from each other; and a fummer feldom paffes without fome

* To render fox-hunting perfect, no young hounds fhould be taken into the pack the firft feafon—a requifite too expenfive for moft fportfmen. The pack fhould confift of about forty couple of hounds, that have hunted, one, two, three, four, or five feafons. The young pack fhould confift of about twenty couple of young hounds, and about an equal number of old ones. They fhould have a feparate eftablifhment, nor fhould the two kennels be near enough to interfere with each other. The feafon over, the beft of the young hounds fhould be taken into the pack, and the draft of old ones exchanged for them. To enable you every feafon to take in twenty couple of young hounds, many muft be bred; and of courfe the greater your choice, the handsomer your pack will become. It will always be eafy to keep up the number of old hounds, for when your own draft is not fufficient, drafts from other packs may eafily be obtained, and at a fmall expence. When young hounds are hunted together the firft feafon, and have not a fufficient number of old hounds along with them, it does them more harm than good.

loffes

losses of that kind. At the same time I must tell you, that I should decline *entering* more than are necessary to keep up the pack, since a greater number would only create useless trouble and vexation.

You wish to know what number of old hounds you should hunt with the young ones:—that must depend on the strength of your pack, and the number which you choose to spare; if good and steady, ten or twelve couple will be sufficient.

My young hounds, and such old ones as are intended to hunt along with them,* are kept in a kennel by themselves, till the young hounds are hunted with the pack. I need not, I am sure, enumerate the many reasons that make *this regulation* necessary.

I never trust my young hounds in the forest till they have been well blooded to fox, and seldom put more than a couple into the pack at a time.†

* Some also take out their unsteady hounds, when they enter the young ones; I doubt the propriety of it.

† I sometimes send all my young hounds together into the forest, with four or five couple of old hounds only; such as I know they cannot spoil. As often as any of them break off to deer, they are taken up, and flogged. When they lose one fox, they try for another; and are kept out, till they are all made tolerably steady.

The

The others are walked out amongst the deer, when the men exercise their horses, and are severely chastised if they take any notice of them. They also draw covers with them; choosing out such, where they can best see their hounds, and most easily command them; and where there is the least chance to find a fox. On these occasions I had rather they should have to rate their hounds than encourage them. It requires less judgment; and, if improperly done, is less dangerous in its consequences. One halloo of encouragement to a wrong scent, more than undoes all that you have been doing.

When young hounds begin to love a scent, it may be of use to turn out a badger before them; you will then be able to discover what improvement they have made; I mention a badger, on a supposition that young foxes cannot so well be spared; besides, the badger, being a slower animal, he may easily be followed, and driven the way you choose he should run.

The day you intend to turn out a fox, or badger, you will do well to send them amongst hares, or deer. A little rating and flogging, before they are encouraged to vermin, is of the greatest use, as it teaches them as well what they should not, as what they should do. I have known a badger run several miles, if judiciously

managed; for which purpose he should be turned out in a very open country, and followed by a person who has more sense than to ride on the line of him. If he do not meet with a cover or hedge in his way, he will keep on for several miles; if he do, you will not be able to get him any farther. You should give him a great deal of law, and you will do well to break his teeth.*

If you run any cubs to ground in an indifferent country, and do not want blood, bring them home, and they will be of use to your young hounds. Turn out bag foxes to your young hounds, but never to your old ones. I object to them on many accounts; but of bag foxes I shall have occasion to speak hereafter.

The day after your hounds have had blood, is also a proper time to send them where there is riot, and to chastise them if they deserve; it is always best to correct them when they cannot help knowing what they are corrected for. When you send out your hounds for this purpose, the later they go out the better, as the worse the scent is the less inclinable will they be to run it, and of

* The critic says, "there is neither justice nor equity in breaking his teeth." (Vide Monthly Review.) I confess there is not, and I never know that it is done, but I feel all the force of the observation. Let *necessity*, if it be able, plead in its excuse.

course will give less trouble in stopping them. It is a common practice with huntsmen to flog their hounds most unmercifully in the kennel: I have already mentioned my disapprobation of it; but if many of your hounds be obstinately riotous,* you may with less impropriety put a live hare into the kennel to them, flogging them as often as they approach her; they will then have some notion, at least, for what they are beaten: but let me entreat you, before this *charivari*† begins, to draft off your hounds; an animal to whom we owe so much good diversion should not be ill used unnecessarily. When a hare is put into the kennel, the huntsman and both the whippers-in should be present; and the whippers-in should flog every hound, calling him by his name, and rateing him as often as he is near the hare; and, upon this occasion, they cannot cut them too hard, or rate them too much. When

* This passage has also been thought deserving of censure, though its motive is humane. By these means, the disobedient are taught obedience, and a more general punishment prevented; which the effect of bad example might otherwise make necessary.

† A confusion arising from a variety of noises. It is a custom in France, and in Switzerland, if a woman marry sooner than is usual after the death of her husband; or a woman get the better of her husband when attempting to chastise her, and return the beating with interest—the neighbours give them a *charivari*—a kind of concert composed of tongs, fire-shovels, kettles, brass pans, &c. &c.

they

they think they have chastised them enough, the hare should then be taken away, the huntsman should halloo off his hounds, and the whippers-in should rate them to him. If any one love hare more than the rest, you may tie a dead one round his neck, flogging him and rating him at the same time. This possibly may make him ashamed of it. I never bought a lot of hounds, some of which were not obliged to undergo this discipline. Either hares are less plentiful in other countries, or other sportsmen are less nice in making their hounds steady from them.

I would advise you to hunt your large covers with your young hounds: it will tire them out;* a necessary step towards making them steady; will open the cover against the time you begin in earnest, and by disturbing the large covers early in the year, foxes will be shy of them in the season, and shew you better chaces; besides, as they are not likely to break from thence, you can

* Provided that you have old hounds enough out, to carry on the scent; if you have not a body of old hounds to keep up a cry on the right scent, the young ones, as soon as the ground becomes soiled, will be scattered about the cover, hunting old scents, and will not get on fast enough to tire themselves. Young hounds should never be taken into large covers, where there is much riot, unless whippers-in can easily get at them.

do no hurt to the corn, and may begin before it is cut.

If your hounds be very riotous, and you are obliged to stop them often from hare, it will be advisable to try on (however late it may be) till you find a fox; as the giving them encouragement should, at such a time, prevail over every other consideration.

Though all young hounds are given to riot, yet the better they are bred, the less trouble they will be likely to give. Pointers well-bred stand naturally, and high-bred fox-hounds love their own game best. Such, however, as are very riotous, should have little rest; you should hunt them one day in large covers where foxes are in plenty; the next day they should be walked out amongst hares and deer, and stopped from riot; the day following be hunted again as before. Old hounds, which I have had from other packs, (particularly such as have been entered at hare) I have sometimes found incorrigible; but I never yet knew a young hound so riotous, but, by this management, he soon became steady.

When hounds are rated, and do not answer the rate, they should be coupled up immediately, and be made to know the whipper-in; in all probability this method will save any farther

H

trouble.

trouble. These fellows sometimes flog hounds unmercifully, and some of them seem to take pleasure in their cruelty; I am sure, however, I need not desire you to prevent any excess in correction.

I have heard that no fox-hounds will break off to deer after once a fox is found.—I cannot say the experience I have had of this diversion will in any wise justify the remark; let me advise you, therefore, to seek a surer dependence. Before you hunt your good hounds where hares are in plenty, let them be awed and stopped from hare: before you hunt amongst deer, let them not only see deer, but let them draw covers where deer are; for you must not be surpris'd, if, after they are so far steady as not to run them in view, they should challenge on the scent of them. Unless you take this method with your young hounds before you put them into the pack, you will run a risk of corrupting the old ones, and may suffer continual vexation by hunting with unsteady hounds. I have already told you, that after my young hounds *are* taken into the pack, I still take out but very few at a time when I hunt among deer. I also change them when I take out others, for the steadiness they may have acquired could be but little depended on, were they to meet with any encouragement to be riotous.

I con-

I confess I think first impressions of more consequence than they are in general thought to be; I not only enter my young hounds to vermin on that account, but I even use them, as early as I can, to the strongest covers and thickest brakes; and I seldom find that they are shy of them afterwards. A friend of mine has assured me, that he once entered a spaniel to snipes, and the dog ever after was partial to them, preferring them to every other bird.

If you have martin cats within your reach, as all hounds are fond of their scent, you will do well to enter your young hounds in the covers they frequent. The martin cat being a small animal, by running the thickest brakes it can find, teaches hounds to run cover, and is therefore of the greatest use. I do not much approve of hunting them with the old hounds; they shew but little sport; are continually climbing trees; and as the cover they run seldom fails to scratch and tear hounds considerably, I think you might be sorry to see your whole pack disfigured by it. The agility of this little animal is really wonderful; and though it falls frequently from a tree, in the midst of a whole pack of hounds, all intent on catching it, there are but few instances, I believe, of a martin's being caught by them in that situation.

In summer hounds might hunt in an evening : —I know a pack, that after having killed one fox in the morning with the young hounds, killed another in the evening with the old ones. Scent generally lies well at the close of the day, yet there is a great objection to hunting at that time; —animals are then more easily disturbed, and you have a greater variety of scents than at an earlier hour.

Having given you all the information that I can possibly recollect, with regard to my own management of young hounds, I shall now take notice of that part of your last letter, where, I am sorry to find, our opinions differ. —Obedience, you say, is every thing necessary in a hound, and that it is of little consequence by what means it is obtained. I cannot concur altogether in that opinion; for I think it very necessary, that the hound should at the same time understand you. Obedience, under proper management, will be a necessary consequence of it. Obedience, surely, is not all that is required of them; they should be taught to distinguish of themselves right from wrong, or I know not how they are to be managed; when, as it frequently happens, we cannot see what they are at, and must take their words for it. A hound that hears a voice which has often rated him, and that hears the whip he has often felt, I know, will stop. I also know,
he

he will commit the same fault again, if he has been accustomed to be guilty of it.

Obedience, you very rightly observe, is a necessary quality in a hound, for he is useless without it. It is, therefore, an excellent principle for a huntsman to set out upon; yet, good as it is, I think it may be carried too far. I would not have him insist on too much, or torment his hounds *mal-à-propos*, by forcibly exacting from them what is not absolutely necessary to your diversion. You say, he intends to enter your hounds at hare:—is it to teach them obedience? Does he mean to encourage vice in them for the sake of correcting it afterwards?—I have heard, indeed, that the way to make hounds steady from hare, is to enter them at hare:* that is, to encourage them to hunt her. The belief of so strange a paradox requires more faith than I can pretend to.

It concerns me to be under the necessity of differing from you in opinion; but since it cannot now be helped, we will pursue the subject, and examine it throughout. Permit me then to ask

* In proper hands either method may do. The method here proposed seems best suited to fox-hounds in general, as well as to those who have the direction of them. The talents of some men are superior to all rules; nor is their success any positive proof of the goodness of their method.

you, what it is you propose from entering your hounds at hare? Two advantages, I shall presume, you expect from it—the teaching of your hounds to hunt, and teaching them to be obedient. However necessary you may think these requisites in a hound, I cannot but flatter myself that they are to be acquired by less exceptionable means. The method I have already mentioned to make hounds obedient, as it is practised in my own kennel—that of calling them over often in the kennel, to use them to their names,* and walking them out often amongst sheep, hares, and deer, from which they are stopped to use them to a rate, in my opinion, would answer your purpose better. The teaching your hounds to hunt, is by no means so necessary as you seem to imagine. *Nature* will teach it them, nor need you give yourself so much concern about it. *Art* only will be necessary to prevent them from hunting what they ought *not to hunt*; and do you think your method a proper one to accomplish it?

The first and most essential thing towards making hounds obedient, I suppose, is to make them understand you; nor do I apprehend that you will find any difficulty on their parts, but such

* Vide note page 43.

as may be occasioned on your's.* The language we use to them to convey our meaning should never vary; still less should we alter the very meaning of the terms we use. Would it not be absurd to encourage when we mean to rate? and if we did, could we expect to be obeyed? You will not deny this, and yet you are guilty of no less an inconsistency, when you encourage your hounds to run a scent to-day, which you know, at the same time, you must be obliged to break them from to-morrow—is it not running counter to justice and to reason?

I confess there is some use in hunting young hounds, where you can easily command them; but even this you may pay too dearly for. Enter your hounds in small covers, or in such large ones as have ridings cut in them; whippers-in can then get at them, can always see what they are at, and I have no doubt that you may have a pack of fox-hounds ready to fox by this means, without adopting so preposterous a method as that of first making hare-hunters of them. You will find, that hounds thus taught what game they are to hunt, and what they are not, will

* Were huntsmen to scream continually to their hounds, using the same halloo whether they were drawing, casting, or running, the hounds could not understand them, and probably would shew, on every occasion, as little attention to them as they would deserve.

stop at a word, because they will understand you: and, after they have been treated in this manner, a smack only of the whip will spare you the inhumanity of cutting your hounds in pieces (not very justly) for faults which you yourself have encouraged them to commit.

In your last letter you seem very anxious to get your young hounds well blooded to fox, at the same time that you talk of entering them at hare. How am I to reconcile such contradictions? If the blood of fox be of so much use, surely you cannot think the blood of hare a matter of indifference; unless you should be of opinion, that a fox is better eating. You may think, perhaps, it was not intended they should hunt sheep; yet we very well know, when once they have killed sheep, that they have no dislike to mutton afterwards.

You have conceived an idea, perhaps, that a fox-hound is designed by nature to hunt a fox. Yet, surely, if that were your opinion, you would not think of entering him at any other game. I cannot, however, suppose nature designed the dog, which we call a fox-hound, to hunt fox only, since, we very well know, he will also hunt other animals. That a well bred fox-hound may give a preference to vermin, *ceteris paribus*, I will not dispute: it is very possible he may; but
of

of this I am certain—that every fox-hound will leave a bad scent of fox for a good one of either hare or deer, unless he has been made steady from them; and in this I shall not fear to be contradicted. But as I do not wish to enter into abstruse reasoning with you, or think it in anywise material to our present purpose, whether the dogs we call fox-hounds were originally designed by nature to hunt fox or not; we will drop the subject. I must at the same time beg leave to observe, that dogs are not the only animals in which an extraordinary diversity of species has happened since the days of Adam: yet a great naturalist tells us, that man is nearer, by eight degrees, to Adam, than is the dog to the first dog of his race; since the age of man is fourscore years, and that of a dog but ten. It therefore follows, that if both should equally degenerate, the alteration would be eight times more remarkable in the dog than in man.

The two most necessary questions which result from the foregoing premises, are—whether hounds entered at hare are perfectly steady, afterwards, to fox—and, whether steadiness be not attainable by more reasonable means? Having never hunted with gentlemen who follow this practice, I must leave the first question for others to determine; but having always had my hounds steady, I can myself answer the second.

The

The objections I have now made to the treatment of young hounds by some huntfinen, though addressed, my friend, to you, are general objections, and should not personally offend you. I know no man more just, or more humane, than yourself. The disapprobation you so strongly marked in your last letter of the severity used in some kennels, the noble animal we both of us admire is much beholden to you for. Your intention of being present yourself the first time a hound is flogged, to see how your new whipper-in behaves himself, is a proof of benevolence, which the Italian author of the most humane book,* could not fail to commend you for. Huntfinen and whippers-in are seldom so unlucky as to have your feelings; yet custom, which authorises them to flog hounds unmercifully, does not do away the barbarity of it.—A gentleman seeing a girl skinning cels alive, asked her, “if it was not very cruel!”—“O not at all, Sir,” replied the girl, “*they be used to it.*”

* Dei delitti e delle pene.

LETTER VIII.

YOU desire to know if there be any remedy for the distemper among dogs. I shall, therefore, mention all the disorders which my hounds have experienced, and point out the remedies which have been of service to them. The distemper you inquire about is, I believe, the most fatal (the plague only excepted) that any animal is subject to. Though not long known in this country, it is almost inconceivable what numbers have been destroyed by it in so short a period; several hundreds I can myself place to this mortifying account. It seems happily to be now on the decline; at least, is less frequent and more mild; and probably in time may be entirely removed. The effects of it are too generally known to need any description of them here; I wish the remedies were known as well!

A brother sportsman communicated to me a remedy, which, he said, his hounds had found great benefit from, viz. *an ounce of Peruvian bark, in a glass of Port wine, taken twice a day.*— It is not infallible; but in some stages of this dis-

disorder is certainly of use. The hound most infected, that ever I knew to recover, was a large stag-hound; he lay five days without being able to get off the bench; receiving little nourishment during the whole time of the disorder, except the medicine, with which he drank three bottles of Port wine. You may think, perhaps, the feeder drank his share—it is probable he might, had it not been sent ready mixed up with the bark. I once tried the *poudre unique*, thinking it a proper medicine for a disorder which is said to be putrid; but I cannot say any thing in its favour, with regard to dogs, at least. Norris's drops I have also given, and with success. I gave a large table-spoonful of them in an equal quantity of Port wine, three times a day; as the dog grew better, I lessened the quantity. When dogs run much at the nose, nothing will contribute more to the cure of them than keeping that part clean; when that cannot conveniently be done, emetics will be necessary: the best I know is a large spoonful of common salt, dissolved in three spoonfuls of warm water.* The first symptom of this disorder generally is a cough. As soon as it is perceived amongst my young hounds, great attention is paid to them: they have plenty

* The quantity of salt must be proportioned to the size of the dog, and to the difficulty there may be to make him vomit.

of clean straw, and are fed oftener and better than at other times; as long as they continue to eat the kennel meat, they are kept together; as soon as any of them refuse to feed, they are removed into another kennel, the door of the lodging-room is left open in the day, and they are only shut up at night: being out in the air is of great service to them. To such as are very bad, I give Norris's drops; to others, emetics; whilst some only require to be better fed than ordinary, and need no other remedy.* They should be fed from the kitchen, when they refuse the kennel meat. Sometimes they will lose the use of their hinder parts; bleeding them, by cutting of the last joint of the tail, may, perhaps, be of service to them. I cannot speak of it with any certainty, yet I have reason to think that I once saved a favourite dog by this operation. In short, by one method or another, I think they may always be recovered.

The likeliest preservative for those that are well is keeping them warm at night, and feeding them high. This disorder being probably infectious, it is better to provide an hospital for such as are seized with it, which should be in the

* Hounds that have the distemper upon them have but little appetite. By feeding two or three together, they eat more greedily.

back part of the kennel. There is no doubt that some kennels are healthier than others, and consequently less liable to it. I apprehend mine to be one of those; for in a dozen years I do not believe that I have lost half that number of old hounds, although I lose so great a number of whelps at their walks. Neighbouring kennels have not been equally fortunate: I have observed, in some of them, a disorder unknown in mine; I mean a swelling in the side, which sometimes breaks, but soon afterwards forms again, and generally proves fatal at last. I once heard a friend of mine say, whose kennel is subject to this complaint, that he never knew but one instance of a dog who recovered from it. I have, however, since known another, in a dog I had from him, which I cured by frequently rubbing with a digestive ointment: the tumour broke, and formed again several times, till at last it entirely disappeared. The disorder we have now been treating of has this, I think, in common with the putrid sore throat, that it usually attacks the weakest. Women are more apt to catch the sore throat than men; children, than women; and young hounds more readily catch this disorder than old. When it seizes whelps at their walks, or young hounds, when first taken from them, it is then most dangerous. I also think that madness, *their* inflammatory fever, is less frequent than it was before this disorder was known.

There are few disorders which dogs are so subject to as the mange. Air and exercise, wholesome food, and cleanliness, are the best preservatives against it. Your feeder should be particularly attentive to it, and when he perceives any spot upon them, let him rub it with the following mixture:

A pint of train oil,
 Half a pint of oil of turpentine,
 A quarter of a pound of ginger, in powder,
 Half an ounce of gunpowder, finely powdered,
 Mixed up cold.

If the disorder should be bad enough to resist *that*, three mild purging balls, one every other day, should be given, and the dog laid up for a little while afterwards. For the red mange, you may use the following:

Four ounces of quicksilver,
 Two ounces of Venice turpentine,
 One pound of hog's lard.

The quicksilver and turpentine are to be rubbed together, till the globules all disappear. When you apply it, you must rub an ounce, once a day, upon the part affected, for three days successively. This is to be used when the hair comes off, or any redness appears.

How wonderful is the fatigue which a fox-hound undergoes! Could you count the miles
 he

he runs, the number would appear almost incredible. This he undergoes cheerfully; and, perhaps, three times a week, through a long season: his health, therefore, well deserves your care; nor should you suffer the least taint to injure it. Huntsmen are frequently too negligent in this point. I know one in particular, a famous one too, whose kennel was never free from the mange, and the smell of brimstone was oftentimes stronger, I believe, in the noses of his hounds than the scent of the fox.—If you chuse to try a curious prescription for the cure of the mange, in the Phil. Transf. No. 25, p. 451, you will find the following:

“ Mr. Cox procured an old mungrel cur, all
 “ over mangy, of a middle size, and having,
 “ some hours before, fed him plentifully with
 “ cheefe-parings and milk, he prepared his ju-
 “ gular vein; then he made a strong ligature on
 “ his neck, that the venal blood might be emit-
 “ ted with the greater impetus; after this, he
 “ took a young land spaniel, about the same
 “ bigness, and prepared his jugular vein like-
 “ wise, that the descendent part might receive
 “ the mangy dog’s blood, and the ascendent dis-
 “ charge his own into a dish; he transfused
 “ about fourteen or sixteen ounces of the blood
 “ of the *infected* into the veins of the *sound* dog;
 “ by this experiment there appeared no alteration
 “ in

“ in the found one, but the mangy dog was, in
 “ about ten days, or a fortnight’s time, perfectly
 “ cured; and possibly this is the quickest and
 “ surest remedy for that disease, either in man
 “ or beast.”

Hounds sometimes are bitten by vipers: sweet oil has been long deemed a certain antidote; some should be applied to the part, and some taken inwardly. Though a friend of mine informs me, that the common cheese rennet, externally applied, is a more efficacious remedy than oil, for the bite of a viper. They are liable to wounds and cuts: Friar’s balsam is very good, if applied immediately; yet, as it is apt to shut up a bad wound too soon, the following tincture in such cases may, perhaps, be preferable; at least, after the first dressing or two—

Of Barbadoes aloes, two ounces,
 Of myrrh, pounded, three ounces;
 Mixed up with a quart of brandy.

The bottle should be well corked, and put into a bark bed, or dunghill, for about ten days or a fortnight. The tongue of the dog, in most cases, is his best surgeon; where he can apply *that*, he will seldom need any other remedy. A green, or seton, in the neck, is of great relief in most disorders of the eyes; and I have frequently known dogs almost blind, recovered by it. It is

also of service when dogs are shaken in the shoulders, and has made many found.* In the latter case, there should be two, one applied on each side, and as near to the shoulder as it is possible. The following ointment may be used to disperse swellings:

Of fresh mutton suet, *tried*, two pounds,
 Of gum elemi, one pound,
 Of common turpentine, ten ounces.

The gum is to be melted with the suet, and, when taken from the fire, the turpentine is to be mixed with it, straining the mixture whilst it is hot. Dogs frequently are stubbed in the foot: the tincture before-mentioned, and this, or any digestive ointment, will soon recover them.† For strains, I use two-thirds of spirits of wine, and one of turpentine, mixed up together; the British oil is also good: hounds, from blows, or other accidents, are often lame in the stifle: either of these, frequently applied, and long rest, are the likeliest means that I know of to recover

* Turning a hound out of the kennel will sometimes cure a lameness in the shoulders. An attentive huntsman will perceive, from the manner of a hound's galloping, when this lameness takes place; and the hound should be turned out immediately. Care should be taken that a hound, turned out, do not become fat.

† An obstinate lameness sometimes is increased by humours. Physic, in that case, may be necessary to remove it.

them.

them. The following excellent remedy for a strain, with which I have cured myself, and many others, I have also found of benefit to dogs, when strained in the leg or foot.

Diffolve two ounces of camphire in half a pint of spirits of wine, and put to it a bullock's gall. The part affected must be rubbed before the fire three or four times a day.

Sore feet are soon cured with brine, pot-liquor, or salt and vinegar, a handful of salt to a pint of vinegar; if neither of these will do, mercurial ointment may then be necessary. A plaster of black pitch is the best cure for a thorn in either man, horse, or dog; and I have known it succeed after every thing else had failed. If the part be much inflamed, a common poultice bound over the plaster will assist in the cure. Hounds frequently are lame in the knee, sometimes from bruises, sometimes from the stab of a thorn; digestive ointment, rubbed in upon the part, will generally be of service.*

If hounds be much troubled with worms, the following is the best cure that I am acquainted with:

* If the knee continue foul, blisters and long rest afterwards are the most likely means to recover it.

Of pewter, pulverized, 1 drachm 10 grs.

Of Æthiops mineral, 16 grs.

This is to be taken three times; every other day, once: the dog should be kept warm, and from cold water. Whey, or pot-liquor, may be given him two or three hours after, and should be continued, instead of meat, during the time he is taking the medicine. The best way of giving it is to mix it up with butter, and then to make it into balls with a little flour.

When a dog is rough in his coat, and scratches much, two or three purging balls, and a little rest afterwards; seldom fail to get him into order again. To make dogs fine in their coats, you should use the following dressing:

One pound of native sulphur,
 One quart of train oil,
 One pint of oil of turpentine,
 Two pounds of soap.

My hounds are dressed with it two or three times only, in a year: in some kennels, I am told they dress them once in two months. The more frequently it is done, the cleaner, I suppose, your hounds will look. Should you choose to dress your puppies before they are put out to their walks, the following receipt, which I received from a friend of mine in Staffordshire,
 (the

(the person already mentioned in this letter, an excellent sportsman, to whom I have many obligations) will answer the purpose best, and on their change of diet, from milk to meat, may be sometimes necessary :

Three quarters of an ounce of quicksilver,
 Half a pint of spirits of turpentine,
 Four ounces of hog's lard,
 One pound of soft soap,
 Three ounces of common turpentine, in which the
 quicksilver must be killed.

Instinct directs dogs, when the stomach is out of order, to be their own physician; and it is from their example that we owe our knowledge how to relieve it. It may appear foreign to our present purpose; yet as it is much (if true) to the honour of animals in general, I must beg leave to add, what a French author tells us:— that also by the hippopotamus, we are instructed how to bleed, and by the crane, how to give a clyster. I have already declared my disapprobation of bleeding hounds, unless they absolutely want it: when they refuse their food, from having been over worked; or when they have taken a chill, to which they are very subject, then the loss of a little blood may be of use to recover them. Sick hounds will recover sooner, if suffered to run about the house, than if they be confined in the kennel.

Madness, thou dreadful malady ; what shall I say to thee ! or what preservative shall I find against thy envenomed fang ! Somerville, who declines writing of lesser ills, is not silent on the subject of this :

“ Of lesser ills the muse declines to sing,
Nor stoops so low ; of these each groom can tell
The proper remedy.”

I wish this worthy gentleman, to whom we have already been so much obliged, had been less sparing of his instructions ; since it is possible grooms may have all the knowledge he supposes them to have, and their masters may stand in need of it. No man, I believe, will complain of being too well informed : nor is any knowledge unnecessary which is likely to be put in practice. The executive part is fully sufficient to trust in the groom's hands. Somerville's advice on the subject of madness, is worthy your notice :

“ When Sirius reigns, and the sun's parching beams
Bake the dry gaping surface, visit thou
Each ev'n and morn, with quick observant eye,
The panting pack. If in dark fullen mood,
The glouting hound refuse his wonted meal,
Retiring to some close obscure retreat,
Gloomy, disconsolate ; with speed remove
The poor infectious wretch, and in strong chains
Bind him suspected. Thus that dire disease
Which art can't cure, wise caution may prevent.”

Plenty

Plenty of water, whey, greens, physic, air, and exercise, such as I have before mentioned, have hitherto preserved my kennel from its baneful influence; and, without doubt, you will also find their good effects. If, notwithstanding, you should at any time have reason to suspect the approach of this evil, let your hounds be well observed at the time when they feed; there will be no danger whilst they can eat. Should a whole pack be in the same predicament, they must be chained up separately; and I should be very cautious what experiment I tried to cure them; for I have been told by those who have had madness in their kennels, and who have drenched their hounds to cure it, that it was the occasion of its breaking out a long time afterwards, and that it continued to do so, as long as they give them any thing to put it off.—If a few dogs only have been bitten, you had better hang them.—If you suspect any, you had better separate them from the rest; and a short time, if you use no remedy, will determine whether they really were bitten or not.—Should you, however, be desirous of trying a remedy, the following prescription, I am told, is a very good one:

Of Turbith's mineral eight grains,
Ditto sixteen grains,
Ditto thirty-two grains.

This is to be given for three mornings successively; beginning the first day with eight grains, and increasing it according to the above direction. The dog should be empty when he takes it, and should have been bled the day before. The dose should be given early in the morning, and the dog may have some thin broth, or pot-liquor, about two or three o'clock, but nothing else during the time he takes the medicine; he should also be kept from water. The best way to give it is in butter, and made up into balls with a little flour. Care must be taken that he does not throw it up again. After the last day of the medicine, he may be fed as usual. Various are the drenches and medicines which are given for this disorder, and all said to be infallible: this last, however, I prefer. The whole pack belonging to a gentleman in my neighbourhood were bitten; and he assures me, he never knew an instance of a dog who went mad, that had taken this medicine.—The caution, which I have recommended to you, I flatter myself will preserve you from this dreadful malady; a malady, for which I know not how to recommend a remedy. Several years ago I had a game-keeper much bitten in the fleshy part of his thigh; a horse, that was bitten at the same time, died raving mad; the man was cured by Sir George Cob's medicine.—I have heard that the Ormskirk medicine is also very good. I have given it to
several

several people in my neighbourhood, and, I believe, with success; at least, I have not, as yet, heard any thing to the contrary—Though I mention these as the two most favourite remedies, I recommend neither. Somerville's advice, which I have already given, is what I recommend to you—if properly attended to, it will prevent the want of any remedy.

P. S. A Treatise on canine madness, written by Dr. James, is worth your reading. You will find, that he prescribes the same remedy for the cure of madness in dogs, as I have mentioned here, but in different quantities. I have, however taken the liberty of recommending the quantities above-mentioned, as they have been known to succeed in my neighbourhood, and as the efficacy of them has been very frequently proved.

LET-

LETTER IX.

THE variety of questions which you are pleased to ask concerning the huntsman, will, perhaps, be better answered, when we are on the subject of hunting. In the mean time, I will endeavour to describe what a good huntsman should be. He should be young, strong, active, bold and enterprising; fond of the diversion, and indefatigable in the pursuit of it; he should be sensible and good-tempered; he ought also to be sober; he should be exact, civil, and cleanly; he should be a good horseman, and a good groom; his voice should be strong and clear, and he should have an eye so quick, as to perceive which of his hounds carries the scent, when all are running; and should have so excellent an ear, as always to distinguish the foremost hounds, when he does not see them. He should be quiet, patient, and without conceit. Such are the excellencies which constitute a good huntsman: he should not, however, be too fond of displaying them, till necessity calls them forth.—He should let his hounds alone, whilst they *can hunt*, and he should have genius to assist them, *when they cannot*.

With

With regard to the whipper-in, as you keep two of them, (and no pack of fox-hounds is complete without) the first may be considered as a second huntsman, and should have nearly the same good qualities. It is necessary besides, that he should be attentive and obedient to the huntsman; and as his horse will probably have most to do, the lighter he is, the better; though if he be a good horseman, the objection of his weight will be sufficiently overbalanced.—He must not be conceited.—I had one formerly, who, instead of stopping hounds as he ought, would try to kill a fox by himself.—This fault is unpardonable;—he should always maintain to the huntsman's halloo, and stop such hounds as divide from it. When stopped, he should get forward with them after the huntsman.

He must always be contented to act an under part, except when circumstances may require that he should act otherwise;* and the moment they cease, he must not fail to resume his former station.—You have heard me say, that where there is much riot, I prefer an excellent whipper-in to an excellent huntsman.—The opinion, I believe, is new; I must therefore endeavour to explain it.

* When the huntsman cannot be up with the hounds, the whipper-in should; in which case it is the business of the huntsman to bring on the tail hounds along with him.

My meaning is this: that I think I should have better sport, and kill more foxes with a moderate huntsman, and an excellent whipper-in, than with the best of huntsmen without such an assistant. You will say, perhaps, that a good huntsman will make a good whipper-in;—not such, however, as I mean;—his talent must be born with him. My reasons are, that good hounds, (and bad I would not keep) oftener need the one than the other; and genius, which in a whipper-in, if attended by obedience, his first requisite, can do no hurt; in a huntsman, is a dangerous, though a desirable quality; and if not accompanied with a large share of prudence, and I may say humility, will oftentimes spoil your sport, and hurt your hounds. A gentleman told me that he heard the famous Will Dean, when his hounds were running hard in a line with Daventry, from whence they were at that time many miles distant, swear exceedingly at the whipper-in, saying, “*What business have you here?*” the man was amazed at the question, “*why don’t you know*” said he, “*and be d---d to you, that the great earth at Daventry is open?*”—The man got forward, and reached the earth just time enough to see the fox go in.—If therefore whippers-in be left at liberty to act as they shall think right, they are much less confined than the huntsman himself, who must follow his hounds; and, consequently they

they have greater scope to exert their genius, if they have any.

I had a dispute with an old sportsman, who contended, that the whipper-in should always attend the huntsman, to obey his orders; (a stable-boy, then, would make as good a whipper-in as the best) but this is so far from being the case, that he should be always on the opposite side of the cover from him, or I am much mistaken in my opinion: if within hearing of his halloo, he is near enough; for that is the hunting signal he is to obey.—The station of the second whipper-in may be near the huntsman, for which reason any boy that can halloo, and make a whip smack, may answer the purpose.

Your first whipper-in being able to hunt the hounds occasionally, will answer another good purpose;—it will keep your huntsman in order. They are very apt to be impertinent when they think you cannot do without them.

When you go from the kennel, the place of the first whipper-in is before the hounds; that of the second whipper-in should be some distance behind them; if not, I doubt if they will be suffered even to empty themselves, let their necessities be ever so great; for as soon as a boy is made a whipper-in, he fancies he is to whip the hounds

hounds whenever he can get at them, whether they deserve it or not.

I have always thought a huntsman a happy man; his office is pleasing, and at the same time flattering; we pay him for that which diverts him, and he is enriched by his greatest pleasure;* nor is a General after a victory, more proud, than is a huntsman who returns with his fox's head.

I have heard that a certain Duke who allowed no vails to his servants, asked his huntsman what he generally made of his field-money, and gave him what he asked, instead of it: this went on very well for some time, till at last the huntsman desired an audience.—“Your Grace,” said he, “is very generous, and gives me more than ever I got from field-money in my life, yet I come to beg a favour of your Grace—that you would let me take field-money again; for I have not half the pleasure now in killing a fox, that I had before.”

As you ask me my opinion of scent, I think I had better give it you before we begin on the subject of hunting. I must, at the same time, take the liberty of telling you, that you have puzzled me exceedingly; for scent is, I believe, what we

* The *field-money* which is collected at the death of a fox.

sportsmen know least about; and, to use the words of a great classic writer;

Hoc sum contentus, quòd etiam si quo quidque fiat ignorem, quid fiat intelligo.---Cic. de div.

Somerville, who, as I have before observed, is the only one I know of, who has thrown any light on the subject of hunting, says, I think, but little about scent; I send you his words; I shall afterwards add a few of my own.

“ Should some more curious sportsmen here inquire,
 Whence this sagacity, this wond’rous power
 Of tracing step by step, or man, or brute?
 What guide invincible points out their way,
 O’er the dark marsh, bleak hill, and sandy plain?
 The courteous muse shall the dark cause reveal.
 The blood that from the heart incessant rolls
 In many a crimson tide, then here, and there
 In smaller rills disparted, as it flows
 Propell’d, the ferous particles evade,
 Thro’ th’ open pores, and with the ambient air
 Entangling mix, as fuming vapours rise,
 And hang upon the gently purling brook,
 There by the incumbent atmosphere compress’d
 The panting chace grows warmer as he flies,
 And thro’ the net-work of the skin perspires;
 Leaves a long—steaming—trail behind; which by
 The cooler air condens’d remains, unless
 By some rude storm dispers’d, or rarefy’d
 By the meridian sun’s intenser heat,
 To every shrub the warm effluvia cling,
 Hang on the grass, impregnate earth and skies.

With

With nostrils opening wide, o'er hill, o'er dale,
 The vig'rous hounds pursue, with ev'ry breath
 Inhale the grateful steam, quick pleasures sting
 Their tingling nerves, while their thanks repay,
 And in triumphant melody confess
 The titillating joy. Thus on the air
 Depends the hunters hopes."

I cannot agree with Mr. Somerville, in thinking that scent depends on the air only; it depends also on the soil. Without doubt, the best scent is that, which is occasioned by the effluvia, as he calls it, or particles of scent, which are constantly perspiring from the game as it runs, and are strongest and most favourable to the hound, when kept by the gravity of the air, to the height of his breast; for then, it neither is above his reach, nor is it necessary that he should stoop for it. At such times, scent is said to lie *breast high*. Experience tells us, that difference of soil occasions difference of scent; and on the richness and moderate moisture of the soil does it also depend, I think, as well on the air. At the time leaves begin to fall, and before they are rotted, we know that the scent lies ill in cover. This alone would be a sufficient proof, that scent does not depend on the air only. A difference of scent is also occasioned by difference of motion; the faster the game goes, the less scent it leaves. When game has been ridden after, and hurried on by imprudent sportsmen, the scent is less favourable to hounds;

hounds; one reason of which may be, that the particles of scent are then more dissipated. But if the game should have been run by a dog not belonging to the pack, seldom will any scent remain.

I believe it is very difficult to ascertain what scent exactly is; I have known it alter very often in the same day. I believe, however, that it depends chiefly on two things, “*the condition the ground is in, and the temperature of the air*”; both of which, I apprehend, should be moist, without being wet: when both are in this condition, the scent is then perfect; and vice versa, when the ground is hard, and the air dry, there seldom will be any scent.—It scarce ever lies with a north, or an east wind; a southerly wind without rain, and a westerly wind that is not rough, are the most favourable.—Storms in the air are great enemies to scent, and seldom fail to take it entirely away.—A fine sun shiny day is not often a good hunting day; but what the French call, *jour des dames*, warm without sun, is generally a perfect one: there are not many such in a whole season.—In some fogs, I have known the scent lie high; in others, not at all; depending, I believe, on the quarter the wind is then in.—I have known it lie very high in a mist, when not too wet; but if the wet should hang on the boughs and bushes, it will fall upon the scent, and deaden it:

When the dogs roll, the scent, I have frequently observed, seldom lies; for what reason, I know not; but, with permission, if they smell strong, when they first come out of the kennel, the proverb is in their favour; and that smell is a prognostic of good luck.—When cobwebs hang on the bushes, there is seldom much scent.—During a white frost the scent lies high; as it also does when the frost is quite gone: at the time of its going off, scent never lies: it is a critical minute for hounds, in which their game is frequently lost. In a great dew the scent is the same. In heathy countries, where the game brushes as it goes along, scent seldom fails. Where the ground carries, the scent is bad for a very evident reason, which hare-hunters, who pursue their game over greasy fallows, and through dirty roads, have great cause to complain of.—A wet night frequently produces good chaces, as then, the game neither like to run the cover, nor the roads.—It has been often remarked, that scent lies best in the richest soils; and countries which are favourable to horses, are seldom so to hounds. I have also observed that, in some particular places, let the temperature of the air be as it may, scent never lies.

Take not out your hounds on a very windy, or bad day.

“ These

 But if th’ inclement skies, and angry Jove,
 Forbid the pleasing intercourse, thy books
 Invite thy ready hand, each sacred page
 Rich with the wise remarks of heroes old.”

The sentiments of Mr. Somerville always do him honour, but on no occasion, more than on this.

In reading over my letter, I find I have used the word *smell*, in a sense that perhaps you will criticize.—A gentleman, who, I suppose, was not the sweetest in the world, sitting in the front boxes at the play-house, on a crowded night, his neighbour very familiarly told him, that he *smelt strong*:—“ No, Sir,” replied he, with infinite good humour,—“ it is you that *smell*, I *sink*.”

[The qualifications necessary to make a good huntiman, Mr. Beckford has dwelt upon with much ingenuity in the former part of this letter, it is therefore hoped, that our presenting the readers of his admired production, in this place, with a portrait of one who is reputed to be the best in the kingdom, will be deemed appropriate; his name is RICHARD FAIRBROTHER, and hunts the pack belonging

ing to Mr. Newman, of Navestock, in Essex:—
the horse on which he is seated, called JOLLY
ROGER, is an old favourite, having carried
him through some of the severest chases ever
known.]

LETTER X.

I THOUGHT that I had been writing all this time to a fox-hunter; and hitherto my letters have had no other object. I now receive a letter from you, full of questions about hare-hunting; to all of which you expect an answer. I must tell you, at the same time, that though I kept harriers many years, it was not my intention, if you had not asked it, to have written on the subject. By inclination, I was never a hare-hunter; I followed this diversion more for air and exercise, than amusement; and if I could have persuaded myself to ride on the turnpike road to the three-mile stone, and back again, I should have thought that I had had no need of a pack of harriers.—Excuse me, brother hare-hunters! I mean not to offend; I speak but relatively to my own particular situation in the country, where hare-hunting is so bad, that it is more extraordinary I should have persevered in it so long, than that I should forsake it now. I respect hunting in whatever shape it appears; it is a manly, and a wholesome exercise, and seems, by nature, designed to be the amusement of a Briton.

You ask, how many hounds a pack of harriers should consist of? and what kind of hound

is best suited to that diversion?—You should never exceed twenty couple in the field; it might be difficult to get a greater number to run well together, and a pack of harriers cannot be complete if they do not:* besides, the fewer hounds you have, the less you foil the ground, which you otherwise would find a great hindrance to your hunting.—Your other question is not easily answered; the hounds, I think, most likely to shew you sport, are between the large slow hunting harrier, and the little fox beagle: the former are too dull, too heavy, and too slow; the latter, too lively, too light, and too fleet. The first species, it is true, have most excellent noses, and I make no doubt, will kill their game at last, if the day be long enough; but, you know, the days are short in winter, and it is bad hunting in the dark. The other, on the contrary, sting and dash, and are all alive; but every cold blast affects them, and if your country be deep and wet, it is not impossible that some of them may be drowned. My hounds were a cross of both these kinds, in which it was my endeavour to get as much bone and strength, in as small a compass as possible.—It was a difficult undertaking.—

* A hound that runs too fast for the rest, ought not to be kept. Some huntsmen load them with heavy collars; some tie a long strap round their necks; a better way would be to part with them. Whether they go too slow, or too fast, they ought equally to be drafted.

I bred

I bred many years, and an infinity of hounds, before I could get what I wanted: I, at last, had the pleasure to see them very handsome; small, yet very bony; they ran remarkably well together; ran fast enough; had all the alacrity that you could desire, and would hunt the coldest scent.—When they were thus perfect, I did, as many others do—I parted with them.

It may be necessary to say, now that I am turned hare-hunter again, many things I have been saying, as a fox-hunter; as I hardly know any two things of the same genus, (if I may be allowed the expression) that differ so entirely. What I said in a former letter, about the huntsman and whipper-in, is in the number: as to the huntsman, he should not be young: I should most certainly prefer one, as the French call it, *d'un certain age*, as he is to be quiet and patient; for patience, he should be a very Grizzle; and the more quiet he is, the better. He should have infinite perseverance; for a hare should never be given up, whilst it is possible to hunt her: she is sure to stop, and therefore may always be recovered. Were it usual to attend to the breed of our huntsmen, as well as to that of our hounds, I know no family that would furnish a better cross than that of the *silent gentleman*, mentioned by the Spectator: a female of his line, crossed

with a knowing huntsman, would probably produce a perfect hare-hunter.

The whipper-in also has little to do with him, whom I before described: yet he may be like the second whipper-in to a pack of fox-hounds; the stable-boy who is to follow the huntsman: but I would have him still more confined, for he should not dare even to stop a hound, or smack a whip, without the huntsman's order. Much noise and rattle is directly contrary to the first principles of hare-hunting, which is, to be perfectly quiet, and to let your hounds alone. I have seen few hounds so good as town packs, that have no professed huntsman to follow them. If they have no one to assist them, they have at the same time, no one to interrupt them; which, I believe, for this kind of hunting, is still more material. I should, however, mention a fault I have observed, and which such hounds must of necessity sometimes be guilty of; that is, *running back the heel*. Hounds are naturally fond of scent; if they cannot carry it forward, they will turn, and hunt it back again: hounds, that are left to themselves, make a fault of this; and it is, I think, the only one they commonly have.—Though it be certainly best to let your hounds alone, and thereby to give as much scope to their natural instinct, as you can; yet, in this particular instance, you should check it mildly; for, as it is almost an
invariable

invariable rule in all hunting, to make the head good, you should encourage them to try forward first; which may be done without taking them off their noses, or without the least prejudice to their hunting. If trying forward should not succeed, they may then be suffered to try back again, which you will find them all ready enough to do; for they are sensible how far they brought the scent, and where they left it. The love of scent is natural to them, and they have infinitely more sagacity in it than we ought to pretend to—I have no doubt, that they often think us very obstinate, and very foolish.

Harriers, to be good, like all other hounds, must be kept to their own game: if you run fox with them, you spoil them: hounds cannot be perfect unless used to one scent and one stile of hunting. Harriers run fox in so different a stile from hare, that it is of great disservice to them when they return to hare again; it makes them wild, and teaches them to skirt. The high scent which a fox leaves, the straightness of his running, the eagerness of the pursuit, and the noise that generally accompanies it, all contribute to spoil a harrier.

I hope you agree with me, that it is a fault in a pack of harriers to go too fast; for a hare is a little timorous animal, which we cannot help
feeling

feeling some compassion for, at the very time when we are pursuing her destruction: we should give scope to all her little tricks, nor kill her foully and over-matched.* Instinct instructs her to make a good defence when not unfairly treated; and I will venture to say, that, as far as her own safety is concerned, she has more cunning than the fox, and makes many shifts to save her life, far beyond all his artifice. Without doubt, you have often heard of hares, who, from the miraculous escapes they have made, have been thought *witches*; but, I believe, you never heard of a fox that had cunning enough to be thought a *wizard*.

They who like to rise early have amusement in seeing the hare trailed to her form; it is of great service to hounds; it also shews their goodness to the huntsman more than any other hunting, as it discovers to him those who have the most tender noses. But, I confess, I seldom judged it worth while to leave my bed a moment sooner on that

* The critic terms this "a mode of destruction somewhat beyond brutal." (Vide Monthly Review.) I shall not pretend to justify that conventional cruelty, which seems so universally to prevail—neither will I ask the gentleman, who is so severe on me, why he feeds the lamb, and afterwards cuts his throat; I mean only to consider cruelty under the narrow limits which concern hunting—if it may be defined to be, a pleasure which results from giving pain, then certainly a sportsman is much less cruel than he is thought.

Have Hunting. - Plate 1st

GOING OUT IN THE MORNING.

account. I always thought hare-hunting should be taken as a ride after breakfast, to get us an appetite to our dinner. If you make a serious business of it, you spoil it. Hare-finders, in this case, are necessary: it is agreeable to know where to go immediately for your diversion, and not beat about, for hours perhaps, before you find. It is more material with regard to the second hare than the first; for if you are warmed with your gallop, the waiting long in the cold afterwards is, I believe, as unwholesome as it is disagreeable. Whoever does not mind this, had better let his hounds find their own game; they will certainly hunt it with more spirit afterwards, and he will have a pleasure himself in expectation which no certainty can ever give. Hare-finders make hounds idle; they also make them wild. Mine knew the men as well as I did myself, could see them as far, and would run, full cry, to meet them. Hare-finders are of one great use; they hinder your hounds from chopping hares, which they, otherwise, could not fail to do. I had in my pack one hound in particular that was famous for it; he would challenge on a trail very late at noon, and had a good knack at chopping a hare afterwards; he was one that liked to go the shortest way to work, nor did he choose to take more trouble than was necessary.—Is it not wonderful, that the trail of a hare should lie after so many

many hours, when the scent of her dies away so soon?

Hares are said (I know not with what truth) to foresee a change of weather, and to feat themselves accordingly. This is however certain, that they are seldom found in places much exposed to the wind. In inclosures they more frequently are found near to a hedge than in the middle of a field. They who make a profession of hare-finding (and a very advantageous one it is in some countries) are directed by the wind where to look for their game. With good eyes and nice observation they are enabled to find them in any weather. You may make forms, and hares will fit in them. I have heard it is a common practice with shepherds on the Wiltshire downs; and, by making them on the side of hills, they can tell at a distance off, whether there are hares in them or not. Without doubt people frequently do not find hares, from not knowing them in their forms. A gentleman, courting with his friends, was shewn a hare that was found sitting—“*Is that a hare?*” he cried, “*then, by Jove, I found two this morning as we rode along.*”

Though the talent of hare-finding is certainly of use, and the money collected for it, when given to shepherds, is money well bestowed by sportsman, as it tends to the preservation of his
game

FINDING THE HARE,

Published as the Act directs by J. Mallett, Warwick Square, March 1st 1896.

game, yet I think, when it is indiscriminately given, that hare-finders are often too well paid. I have known them frequently get more than a guinea for a single hare. I myself have paid five shillings in a morning for hares found fitting. To make our companions pay dearly for their diversion, and oftentimes so much more than it is worth; to take from the pockets of men who oftentimes can ill afford it, as much as would pay for a good dinner afterwards, is, in my opinion, an ungenerous custom; and this consideration induced me to collect but once, with my hounds, for the hare-finders. The money was afterwards divided amongst them, and if they had less than half a crown each, I myself supplied the deficiency.—An old miser, who had paid his shilling, complained bitterly of it afterwards, and said, “*he had been made to pay a shilling for two penny-worth of sport.*”

When the game is found you cannot be too quiet: the hare is an animal so very timorous, that she is frequently headed back, and your dogs are liable to over-run the scent at every instant; it is best, therefore, to keep a considerable way behind them, that they may have room to turn as soon as they perceive they have lost the scent; and, if treated in this manner, they will seldom over-run it much. Your hounds, through the whole chace, should be left almost entirely to them-

themselves, nor should they be hallooed much : when the hare doubles, they should hunt through those doubles ; nor is a hare hunted fairly when hunted otherwise. They should follow her every step she takes, as well over greasy fallows as through flocks of sheep ; nor should they ever be cast, but when nothing can be done without it. I know a gentleman, a pleasant sportsman, but a very irregular hare-hunter, who does not exactly follow the method here laid down. As his method is very extraordinary I will relate it to you :—His hounds are large and fleet ; they have at times hunted every thing ; red deer, fallow deer, fox, and hare ; and must in their nature have been most excellent, since, notwithstanding the variety of their game, they are still good. When a hare is found fitting, he seldom fails to give his hounds a view ; and as the men all halloo, and make what noise they can, she is half frightened to death immediately. This done, he then sends his whipper-in to ride after her, with particular directions not to let her get out of his sight ; and he has found out, that this is the only proper use of a whipper-in. If they come to a piece of fallow, or a flock of sheep, the hounds are not suffered to hunt any longer, but are capped and hallooed as near to the hare as possible ; by this time the poor devil is near her end, which the next view generally finishes ; the strongest hare, in this manner, seldom standing twenty minutes ;

minutes; but, my friend says, a hare is good eating, and he therefore thinks, that he cannot kill too many of them. By what Martial says, I suppose *he* was of the same opinion,

“ Inter quadrupedes gloria prima lepus.”

A propos to eating them.—I must tell you, that in the Encyclopedie, a book of universal knowledge, where, of course, I expected to find something on hunting, which might be of service to you, as a sportsman, to know, I found the following advice about the dressing of a hare, which may be of use to your cook; and the regard I have for your health will not suffer me to conceal it from you.—“ *On mange le levrault roti dans quelques provinces du royaume, en Gascogne et en Languedoc, par exemple, avec une sauce composée de vinaigre et de sucre, qui est mauvaise, malsaine en soi essentiellement, mais qui est surtout abominable pour tous ceux qui n’y sont pas accoutumés.*” You, without doubt, therefore, will think yourself obliged to the authors of the Encyclopedie for their kind and friendly information.

Having heard of a small pack of beagles to be disposed of in Derbyshire, I sent my coachman, the person whom I could at that time best spare, to fetch them. It was a long journey, and not having been used to hounds, he had some trouble in getting them along; also, as ill-luck would
have

have it, they had not been out of the kennel for many weeks before, and were so riotous, that they ran after every thing they saw; sheep, cur-dogs, and birds of all sorts, as well as hares and deer, I found, had been his amusement, all the way along: however, he lost but one hound; and when I asked him what he thought of them, he said—"they could not fail of being good hounds, for they would hunt *any thing*."

In your answer to my last letter, you ask, of what service it can be to a huntsman to be a good groom? and, whether I think he will hunt hounds the better for it?—I wonder you did not ask, why he should be *cleanly*?—I should be more at a loss how to answer you. My huntsman has always the care of his own horses; I never yet knew one who did not think himself capable of it; it is for that reason I wish him to be a *good groom*.

You say, that you cannot see how a huntsman of genius can spoil your sport, or hurt your hounds?—I will tell you how:—by too much foul play he frequently will catch a fox before he is half tired; and by lifting his hounds too much, he will teach them to shuffle.—An improper use of the one may spoil your sport; too frequent use of the other must hurt your hounds.

New Hunting-Plate, &c.

TRYING FOR A HARE,

Published Price 9d. 1796; by A. Walker, Warwick Court, London.

LETTER XI.

I HAVE already observed, that a trail in the morning is of great service to hounds; and, that to be perfect, they should always find their own game: for the method of hare-finding, though more convenient, will occasion some vices in them which it will be impossible to correct.

Mr. Somerville's authority strengthens my observation; that, when a hare is found, all should be quiet: nor should you ride near your hounds, till they are well settled to the scent.

“—————let all be hush'd,
 No clamour loud, no frantic joy be heard;
 Lest the wild hound run gadding o'er the plain
 Untractable, nor hear thy chiding voice.”

The natural eagerness of the hounds will, at such a time, frequently carry even the best of them wide of the scent; which too much encouragement, or pressing too close upon them, may continue beyond all possibility of recovery: this should be always guarded against. After a little while, you have less to fear. You may then approach them nearer, and encourage them

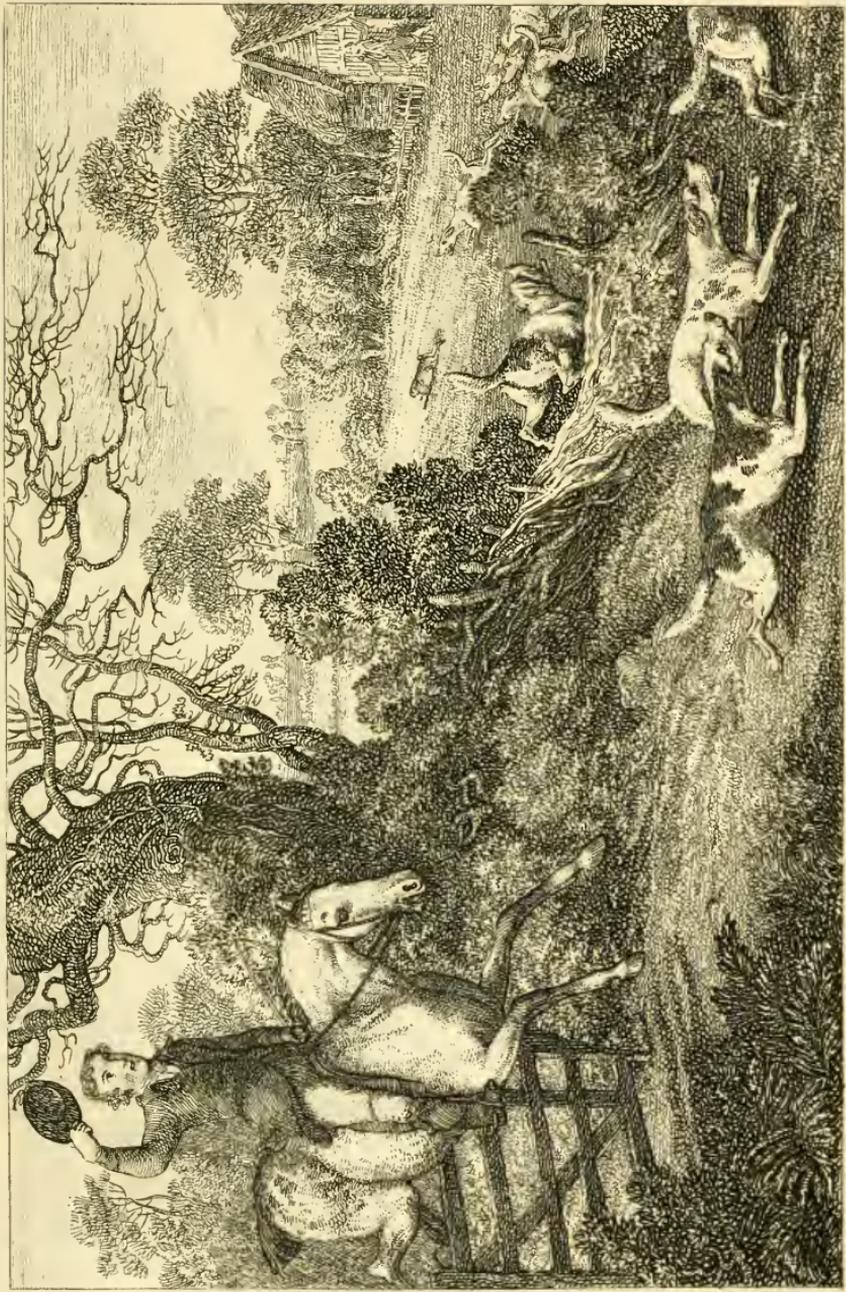

more: leaving, however, at all times, sufficient room for them to turn, should they over-run the scent. On high roads and dry paths be always doubtful of the scent, nor give them much encouragement; but when a hit is made on either side, you may halloo as much as you please; nor can you then encourage your hounds too much. A hare generally describes a circle as she runs; larger or less, according to her strength, and the openness of the country. In inclosures, and where there is much cover, the circle is for the most part so small that it is a constant puzzle to the hounds. They have a Gordian knot, in that case, ever to unloose; and though it may afford matter of speculation to the philosopher, it is always contrary to the wishes of the sportsman. Such was the country I hunted in for many years.

“ Huntsman! her gait observe: if in wide rings
 She wheels her mazy way, in the same round
 Persisting still, she'll foil the beaten track.
 But if she fly, and with the fav'ring wind
 Urge her bold course, less intricate thy task:
 Push on thy pack.”

SOMERVILLE.

Besides running the foil, they frequently make doubles, which is going forward, to tread the same steps back again, on purpose to confuse their pursuers: and the same manner in which they make the first double, they generally continue,

Howe's, etc.

HITTING HER OFF,
at a Fault.

nue, whether long or short. This information, therefore, if properly attended to by the huntsman, may be of use to him in his casts.

When they make their double on a high road, or dry path, and then leave it with a spring, it is often the occasion of a long fault: the spring which a hare makes on these occasions is hardly to be credited, any more than is her ingenuity in making it; both are wonderful!

“————— let cavillers deny
That brutes have reason; sure 'tis something more:
'Tis Heaven directs and stratagems inspire,
Beyond the short extent of human thought.”

SOMERVILE.

She frequently, after running a path a considerable way, will make a double, and then stop till the hounds have past her; she will then steal away as secretly as she can, and return the same way she came. This is the greatest of all trials for hounds. It is so hot a foil, that in the best packs there are not many hounds that can hunt it; you must follow those hounds that can, and try to hit her off where she breaks her foil, which in all probability she will soon do, as she now flatters herself she is secure. When the scent lies bad in cover, she will sometimes seem to hunt the hounds.

“ _____ The covert’s utmost bound
 Slily she skirts; behind them cautious creeps,
 And in that very track, so lately stain’d
 By all the steaming crowd, seems to pursue
 The foe she flies.”— SOMERVILLE.

When the hounds are at a check, make your huntsman stand still, nor suffer him to move his horse one way or the other: hounds lean naturally toward the scent, and if you say not a word to them, will soon recover it. If you speak to a hound at such a time, calling him by his name, which is too much the practice, he seldom fails to look up in your face, as much as to say, *what the deuce do you want?*—when he floops to the scent again, is it not probable that he means to say, *You fool, you, let me alone.*

When your hounds are at fault, let not a word be said: let such as follow them ignorantly and unworthily stand all aloof—*Procul, O procul este profani!* for whilst such are chattering, not a hound will hunt. *A propos*, Sir, a politician will say—What news from America? *A propos*—Do you think both the admirals will be tried? Or, *propos*—Did you hear what has happened to my grandmother? Such questions are, at such a time, extremely troublesome, and very *mal-à-propos*. Amongst the ancients, it was reckoned *an ill omen* to speak in hunting—I wish it were thought so now. *Hoc age* should be one
of

of the first maxims in hunting, as in life; and I can assure you, when I am in the field, I never wish to hear any other tongue than that of a hound. A neighbour of mine was so truly a hare-hunter in this particular, that he would not suffer any body to speak a word when his hounds were at fault: a gentleman happened to cough; he rode up to him immediately, and said, “ *I wish, Sir, with all my heart, that your cough was better.*”

In a good day, good hounds seldom give up the scent at head; if they do, there is generally an obvious reason for it: this observation a huntsman should always make; it will direct his cast. If he be a good one, he will attend, as he goes, not only to his hounds, nicely observing which have the lead, and the degree of scent they carry; but also to the various circumstances that are continually happening from change of weather, and difference of ground. He will likewise be mindful of the distance which the hare keeps before the hounds, and of her former doubles; he will also remark what point she makes to. All these observations will be of use, if a long fault make his assistance necessary; and if the hare should have headed back, he will carefully observe whether she met with any thing in her course to turn her, or turned of her own accord. When he casts his hounds, let him begin by making a small
L 3 circle;

circle; if that will not do, then let him try a larger; he afterwards may be at liberty to persevere in any cast he shall judge most likely. As a hare generally revisits her old haunts, and returns to the place where she was first found, if the scent be quite gone, and the hounds can no longer hunt; *that* is as likely a cast as any to recover her. Let him remember, in all his casts, that the hounds are not to follow his horse's heels, nor are they to carry their heads high, and noses in the air. At these times they must try for the scent, or they will never find it; and he is either to make his cast quick or slow, as he perceives his hounds try, and as the scent is either good or bad.

Give particular directions to your huntsman to prevent his hounds, as much as he can, from chopping hares. Huntsmen like to get blood at any rate; and when hounds are used to it, it would surprize you to see how attentive they are to find opportunities. A hare must be very wild, or very nimble, to escape them. I remember, in a furzy country, that my hounds chopped three hares in one morning; for it is the nature of those animals either to leap up before the hounds come near them, and *steal away*, as it is called, or else to lie close, till they put their very noses upon them. Hedges, also, are very dangerous; if the huntsman beat the hedge himself, which

Bowditch, del.

is the usual practice, the hounds are always upon the watch, and a hare must have good luck to escape them all. The best way to prevent it, is to have the hedge well beaten at some distance before the hounds.

Hares seldom run so well as when they do not know where they are. They run well in a fog, and generally take a good country. If they set off down the wind, they seldom return: you then cannot push on your hounds too much. When the game is sinking, you will perceive your old hounds get forward; they then will run at head.

“ Happy the man, who with unrivall'd speed
 Can pass his fellows, and with pleasure view
 The struggling pack; how in the rapid course
 Alternate they preside, and jostling push
 To guide the dubious scent; how giddy youth
 Oft babbling errs, by wiser age reprov'd;
 How, niggard of his strength, the wise old hound
 Hangs in the rear, till some important point
 Rouse all his diligence, or till the chace
 Sinking he finds; then to the head he springs,
 With thirst of glory fir'd, and wins the prize.”

SOMERVILLE.

Keep no babblers; for though the pack soon find them out, and mind them not, yet it is unpleasant to hear their noise; nor are such fit companions for the rest.

Though the Spectator makes us laugh at the oddity of his friend, Sir Roger, for returning a hound, which he said was an excellent *bass*, because he wanted a *counter-tenor*; yet I am of opinion, that if we attended more to the variety of notes frequently to be met with in the tongues of hounds, it might greatly add to the harmony of the pack. I do not know that a complete concert could be attained, but it would be easy to prevent discordant sounds.

Keep no hound that runs false: the loss of one hare is more than such a dog is worth.

It is but reasonable to give your hounds a hare sometimes: I always gave mine the last they killed, if I thought they deserved her.

It is too much the custom, first to ride over a dog, and then cry, *ware horse*. Take care not to ride over your hounds; I have known many a good dog spoiled by it: in open ground caution them first; you may afterwards ride over them, if you please; but in roads and paths they frequently cannot get out of your way; it surely, then, is your business either to stop your horse or break a way for them, and the not doing it, give me leave to say, is not less absurd than cruel; nor can that man be called a good sportsman who thus wantonly destroys his own sport. Indeed,
good

good sportsmen feldom ride on the line of the tail hounds.

An acquaintance of mine, when he hears any of his fervants fay, *ware horfe!* halloos out—*ware horfe!*—*ware dog!* and be hanged to you.

You ask how my warren hares are caught?—it shall be the subject of my next letter.

LET-

LETTER XII.

YOU wish to know how my warren hares are caught? they are caught in traps, not unlike to the common rat-traps. I leave mine always at the meuses, but they are *set* only when hares are wanted: the hares, by thus constantly going through them, have no mistrust, and are easily caught. These traps should be made of old wood, and even then it will be some time before they will venture through them. Other meuses must be also left open, lest a distaste should make them forsake the place. To my warren I have about twenty of these traps; though, as the stock of hares is great, I seldom have occasion to set more than five or six, and scarcely ever fail of catching as many hares. The warren is paled in, but I found it necessary to make the meuses of brick; that is, where the traps are placed. Should you at any time wish to make a hare-warren, it will be necessary for you to see one first, and examine the traps, boxes, and stoppers, to all which there are particularities not easy to be described. Should you perceive the hares, towards the end of the season, to become shy of the traps, from having been
been

been often caught, it will be necessary to drive them in with spaniels. Should this be the case, you will find them very thick round the warren; for the warren-hares will be unwilling to leave it, and when disturbed by dogs will immediately go in.

If you turn them out before greyhounds, you cannot give them too much law; if before hounds, you cannot give them too little; for reasons which I will presently add. Though hares, as I told you before, never run so well before hounds as when they do not know where they are, yet, before greyhounds, it is the reverse; and your trap-hares, to run well, should always be turned out within their knowledge: they are naturally timid, and are easily disheartened, when they have no point to make to for safety.

If you turn out any before your hounds, (which, if it be not your wish, I shall by no means recommend) give them not much time, but lay on your hounds as soon as they are out of view; if you do not, they will be likely to stop, which is oftentimes fatal. Views are at all times to be avoided, but particularly with trap-hares; for, as these know not where they are, the hounds have too great an advantage over them. It is best to turn them down the wind; they hear the hounds better, and seldom turn
I again.

again. Hounds, for this business, should not be too fleet. These hares run straight, and make no doubles; they leave a strong scent, and have other objections in common with animals turned out before hounds: they may give you a gallop, they will, however, shew but little hunting.—The hounds are to be hunted like a pack of fox-hounds, as a trap-hare runs very much in the same manner, and will even top the hedges. What I should prefer to catching the hares in traps, would be, a warren in the midst of an open country, which might be stopped close on hunting-days. This would supply the whole country with hares, which, after one turn round the warren, would most probably run straight at end. The number of hares which a warren will supply is hardly to be conceived; I seldom turned out less in one year than thirty brace of trap-hares, besides many others killed in the environs, of which no account was taken. My warren is a wood of near thirty acres; one of half the size would answer the purpose perhaps as well. Mine is cut out into many walks; a smaller warren should have only *one*, and *that* round the outside of it. No dog should ever be suffered to go into it, and traps should be constantly set for stoats and polecats. It is said par-fley makes hares strong; they certainly are very fond of eating it: it therefore cannot be amiss to
fow

ſow ſome about the warren, as it may be the means of keeping your hares more at home.

I had once ſome converſation with a gentleman about the running of my trap-hares, who ſaid he had been told that catching a hare, and tying *a piece of ribbon to her ear*, was a ſure way to make her run *ſtrait*.---I make no doubt of it---and ſo would *a caniſter tyed to her tail*.

I am forry you ſhould think I began my firſt letter on the ſubject of hare-hunting in a manner that might offend any of my brother ſportsmen. It was not hare-hunting I meant to depreciate, but the country I had hunted hare in.—It is good di- verſion in a good country:—you are always cer- tain of ſport; and if you really love to ſee your hounds hunt; the hare, when properly hunted, will ſhew you more of it, than any other animal.

You aſk me, what is the right time to leave off hare-hunting?—You ſhould be guided in that by the ſeaſon: you ſhould never hunt after March; and, if the ſeaſon be forward, you ſhould leave off ſooner.

Having now ſo conſiderably exceeded the plan I firſt propoſed, you may wonder, if I omit to ſay any thing of *ſtag-hunting*. Believe me, if I do, it will not be for want of reſpect; but becauſe I
have

have seen very little of it. It is true, I hunted two winters at Turin; but their hunting, you know, is no more like our's, than is the hot meal we *there* stood up to eat, to the English breakfast we sit down to *here*.—Were I to describe their manner of hunting, their infinity of dogs, their number of huntsmen, their relays of horses, their great saddles, great bits, and jack boots, it would be no more to our present purpose, than the description of a wild boar chase in Germany, or the hunting of jackalls in Bengal. *C'est une chasse magnifique, et voila tout*.—However, to give you an idea of their huntsmen, I must tell you that one day the stag, which is very unusual, broke cover and left the forest; a circumstance, which gave as much pleasure to me, as displeasure to all the rest—it put every thing into confusion. I followed one of the huntsmen, thinking he knew the country best, but it was not long before we were separated; the first ditch we came to stopped him: I, eager to go on, hallooed out to him, *allons, Piqueur, sautez donc*.—“*Non pardi,*” replied he, very coolly, “*c'est un double fossé*—*je ne saute pas des doubles fossés*.—There was also an odd accident the same day, which, has it happened to a great man, even to the King himself, you may think interesting; besides, it was the occasion of a *bon mot* worth your hearing.—The King, eager in the pursuit, rode into a bog, and was dismounted—he was not hurt—he was soon

on

on his legs, and we were all standing round him. One of his old generals, who was at some distance, behind, no sooner saw the king off his horse, but he rode up full gallop to know the cause, "*Qu'est ce que c'est? qu'est ce que c'est?*" cries the good old general, and in he tumbles into the same bog. Count Kevenhuller, with great humour replied, pointing to the place, "*voila ce que c'est! voila ce que c'est.*"

With regard to the stag-hunting in this country, as I have already told you, that I know but little of it; but you will, without doubt, think it a sufficient reason for my being silent concerning it.

LETTER XIII.

IN some of the preceding letters we have, I think, settled the business of the kennel in all its parts; and determined what should be the number, and what the qualifications of the attendants on the hounds: we also agree in opinion, that a pack should consist of about twenty-five couple; I shall now proceed to give some account of the use of them. You desire that I would be as particular, as if you were to hunt the hounds yourself: to obey you, therefore, I think I had better send you a description of an imaginary chace, in which I shall be at liberty to describe such events as probably may happen, and to which your present inquiries seem most to lead; a further and more circumstantial explanation of them will necessarily become the subject of my future letters. I am, at the same time, well aware of the difficulties attending such an undertaking. A fox-chace is not easy to be described—yet as even a faint description of it may serve, to a certain degree, as an answer to the various questions which you are pleased to make concerning that diversion, I shall prosecute my attempt in such a manner, as I think may suit your purpose best.—As I fear it may read ill, it shall

shall not be long. A gentleman, to whose understanding nature had most evidently been sparing of her gifts, as often as he took up a book, and met with a passage which he could not comprehend, was used to write in the margin opposite *matiere embrouillée*, and gave himself no further concern about it. As different causes have been known to produce the same effects, should *you* treat *me* in like manner, I shall think it the severest censure that can be passed upon me. Our friend Somerville, I apprehend, was no great fox-hunter; yet all he says on the subject of hunting is so sensible and just, that I shall turn to his account of fox-hunting, and quote it where I can. The hour most favourable to the diversion, is certainly an early one; nor do I think I can fix it better than to say, the hounds should be at the cover at sun-rising. Let us suppose that we are arrived at the cover side.—

“ ————— Delightful scene!
 Where all around is gay, men, horses, dogs;
 And in each smiling countenance appears
 Fresh blooming health, and universal joy.”

SOMERVILE.

Now let your huntsman throw in his hounds as quietly as he can, and let the two whippers-in keep wide of him on either side, so that a single hound may not escape them; let them be attentive to his halloo, and be ready to encourage, or

M. rate,

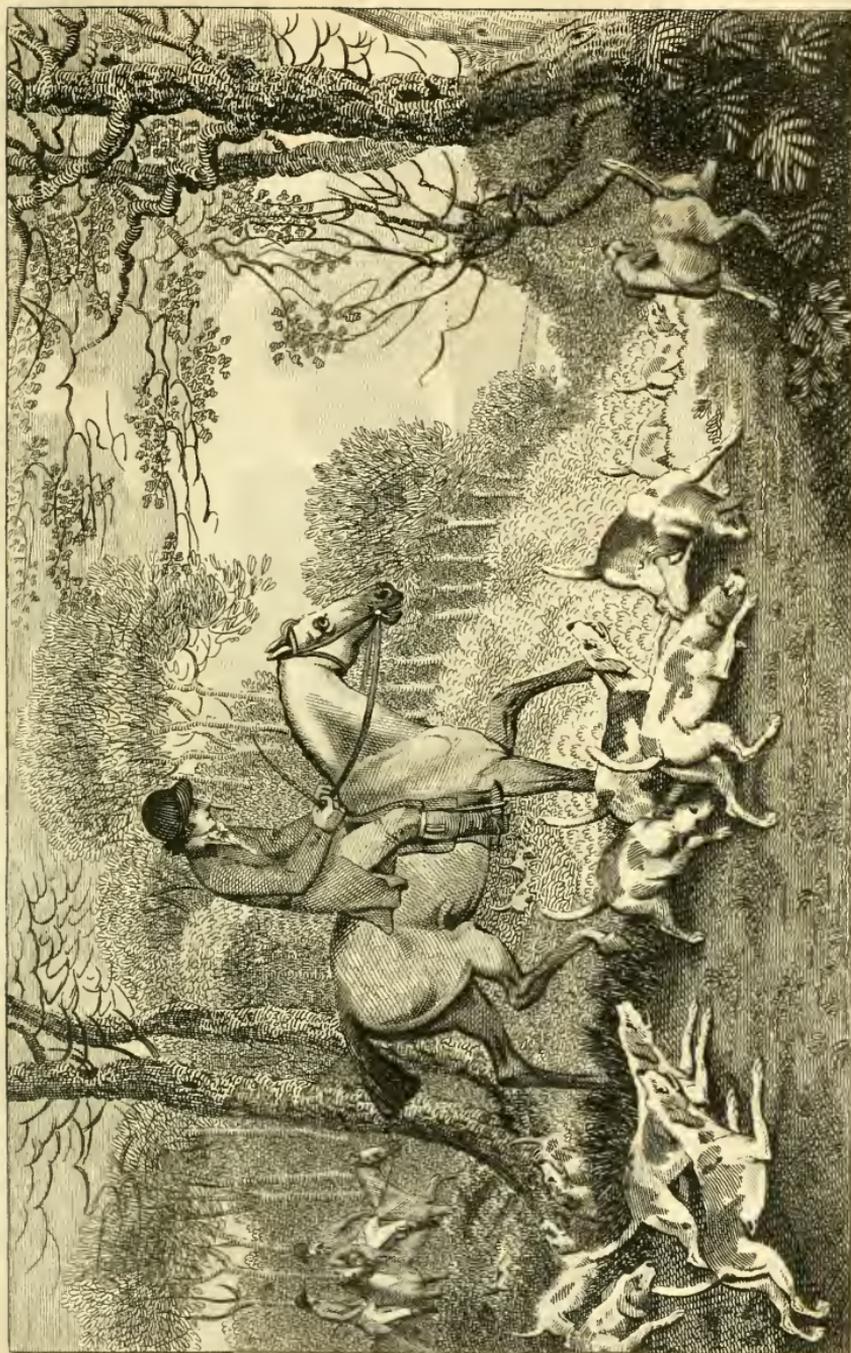

rate, as that directs; he will, of course, draw up the wind, for reasons which I shall give in another place.—Now, if you can keep your brother sportsmen in order, and put any discretion into them, you are in luck; they more frequently do harm than good: if it be possible, persuade those who wish to halloo the fox off, to stand quiet under the cover side, and on no account to halloo him too soon; if they do, he most certainly will turn back again: could you entice them all into the cover, your sport, in all probability, would not be the worse for it.

How well the hounds spread the cover! the huntsman, you see, is quite deserted, and his horse, who so lately had a crowd at his heels, has not now one attendant left. How steadily they draw! you hear not a single hound; yet none are idle. Is not this better than to be subject to continual disappointment, from the eternal babbling of unsteady hounds?

“ ————— See! how they range
 Dispers'd, how busily this way and that,
 They cross, examining with curious nose
 Each likely haunt. Hark! on the drag I hear
 Their doubtful notes, preluding to a cry
 More nobly full, and swell'd with every mouth.”

SOMERVILLE.

BREAKING COVER,

— Published by J. Mitchell, Warwick Square, January 1st 1793. —

How musical their tongues!—And as they get nearer to him, how the chorus fills!—Hark! he is found.—Now, where are all your sorrows, and your cares, ye gloomy souls! Or where your pains, and aches, ye complaining ones! one halloo has dispelled them all.—What a crash they make! and echo seemingly takes pleasure to repeat the sound. The astonished traveller forsakes his road, lured by its melody; the listening plowman now stops his plow; and every distant shepherd neglects his flock, and runs to see him break.—What joy! what eagerness in every face!

“ How happy art thou, man, when thou’rt no more
Thyself! when all the pangs that grind thy soul,
In rapture and in sweet oblivion lost,
Yield a short interval, and ease from pain!”

SOMERVILE;

Mark how he runs the cover’s utmost limits, yet dares not venture forth; the hounds are still too near!—That check is lucky!—now, if our friends head him not, he will soon be off—hark! they halloo: by G—d he’s gone!

“ ————— Hark! what loud shouts
Re-echo thro’ the groves! he breaks away:
Shrill horns proclaim his flight. Each straggling hound
Strains o’er the lawn to reach the distant pack.
’Tis triumph all, and joy.”

SOMERVILE;

Now huntsman get on with the head hounds; the whipper-in will bring on the others after you: keep an attentive eye on the leading hounds, that should the scent fail them, you may know at least how far they brought it.

Maid *Gallop*, how he leads them!—It is difficult to distinguish which is first, they run in such a file; yet *he* is the foremost hound.—The goodness of his nose is not less excellent than his speed:—how he carries the scent! and when he loses it, see how eagerly he flings to recover it again!—There—now he's at head again!—see how they top the hedge!—Now, how they mount the hill!—Observe what a head they carry, and shew me, if thou canst, one shuffler or skirter amongst them all: are they not like a parcel of brave fellows, who, when they engage in an undertaking, determine to share its fatigue and its dangers, equally amongst them?

“ ———— Far o'er the rocky hills we range,
 And dangerous our course; but in the brave
 True courage never fails. In vain the stream
 In foaming eddies whirls, in vain the ditch
 Wide gaping threatens death. The craggy steep,
 Where the poor dizzy shepherd crawls with care,
 And clings to every twig, gives us no pain;
 But down we sweep, as stoops the falcon bold
 To pounce his prey. Then up the opponent hill,
 By the swift motion slung, we mount aloft:
 So ships in winter seas now sliding sink

Coak sculp.

NO. VII.

Published Feb. 1, 1795, by C. Whittle, Warwick Square, London.

Adown the steepy wave, then tofs'd on high
Ride on the billows, and defy the storm."

SOM.

It was then the fox I saw, as we came down the hill;—those crows directed me which way to look, and the sheep ran from him as he past along. The hounds are now on the very spot, yet the sheep stop them not, for they dash beyond them. Now see with what eagerness they cross the plain!—*Gallop* no longer keeps his place, *Brusher* takes it—see how he flings for the scent, and how impetuously he runs!—How eagerly he took the lead, and how he strives to keep it—yet *Victor* comes up apace.—He reaches him!—See what an excellent race it is between them!—It is doubtful which will reach the cover first.—How equally they run!—how eagerly they strain! now *Victor*—*Victor*!—Ah! *Brusher*, you are beaten; *Victor* first tops the hedge.—See there! see how they all take it in their strokes! the hedge cracks with their weight, so many jump at once.—

Now hastes the whipper-in to the other side of the cover; he is right unless he head the fox.

“Heav’ns! what melodious strains! how beat our hearts
Big with tumultuous joy! the loaded gales
Breathe harmony; and as the tempest drives
From wood to wood, thro’ ev’ry dark recess
The forest thunders, and the mountains shake.”

SOM.

Listen!—the hounds have turned. They are now in two parts: the fox has been headed back, and we have changed at last.

Now, my lad, mind the huntsman's halloo, and stop to those hounds which he encourages. He is right!—that, doubtless, is the hunted fox;—Now they are off again.

“What lengths we pass! where will the wand’ring chace
Lead us bewilder’d! smooth as swallows skim
The new-florn mead, and far more swift we fly.
See my brave pack; how to the head they press,
Jostling in close array, then more diffuse
Obliquely wheel, while from their op’ning mouths
The vollied thunder breaks.

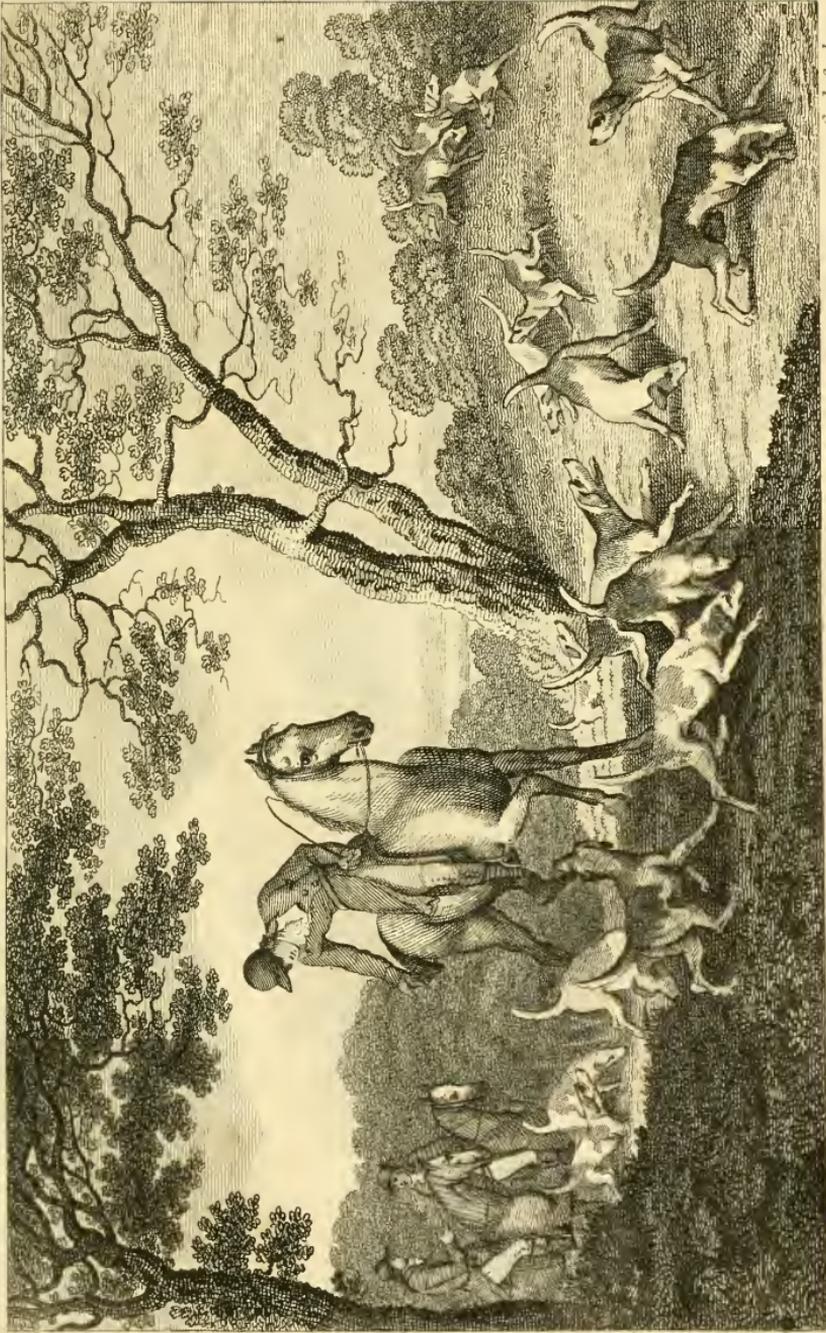

—————Look back and view
The strange confusion of the vale below,
Where fore vexation reigns;—————

—————Old age laments
His vigour spent; the tall, plump, brawny youth
Curfes his cumbrous bulk? and envies now
The short pygmean race, he whilom kenn’d
With proud insulting leer. A chosen few
Alone the sport enjoy, nor droop beneath
Their pleasing toils.”

SOM.

Ha! a check. — Now for a moment's patience!—We press too close upon the hounds!—Huntsman, stand still! as they want you not.—How admirably they spread! how wide they cast! Is there a single hound that does not try? if there be, ne'er shall he hunt again. There, *Trueman*

is

Cook Sculp.

AT FAULT.

is on the scent—he feathers, yet still is doubtful—’tis right! how readily they join him! See those wide-casting hounds, how they fly forward to recover the ground they have lost!—Mind *Lightning*, how she dashes; and *Mungo*, how he works! Old *Frantic*, too, now pushes forward; she knows, as well as we, the fox is sinking.

“—————Ha! yet he flies, nor yields
To black despair. But one loose more, and all
His wiles are vain. Hark! thro’ yon village now
The rattling clamour rings. The barns, the cots,
And leafless elms return the joyous sounds.
Thro’ ev’ry homestall, and thro’ ev’ry yard,
His midnight walks, panting, forlorn, he flies.

SOM.

Huntsman! at fault at last? How far did you bring the scent?—Have the hounds made their own cast?—Now make your’s. You see that sheep-dog has coursed the fox;—get forward with your hounds, and make a wide cast.

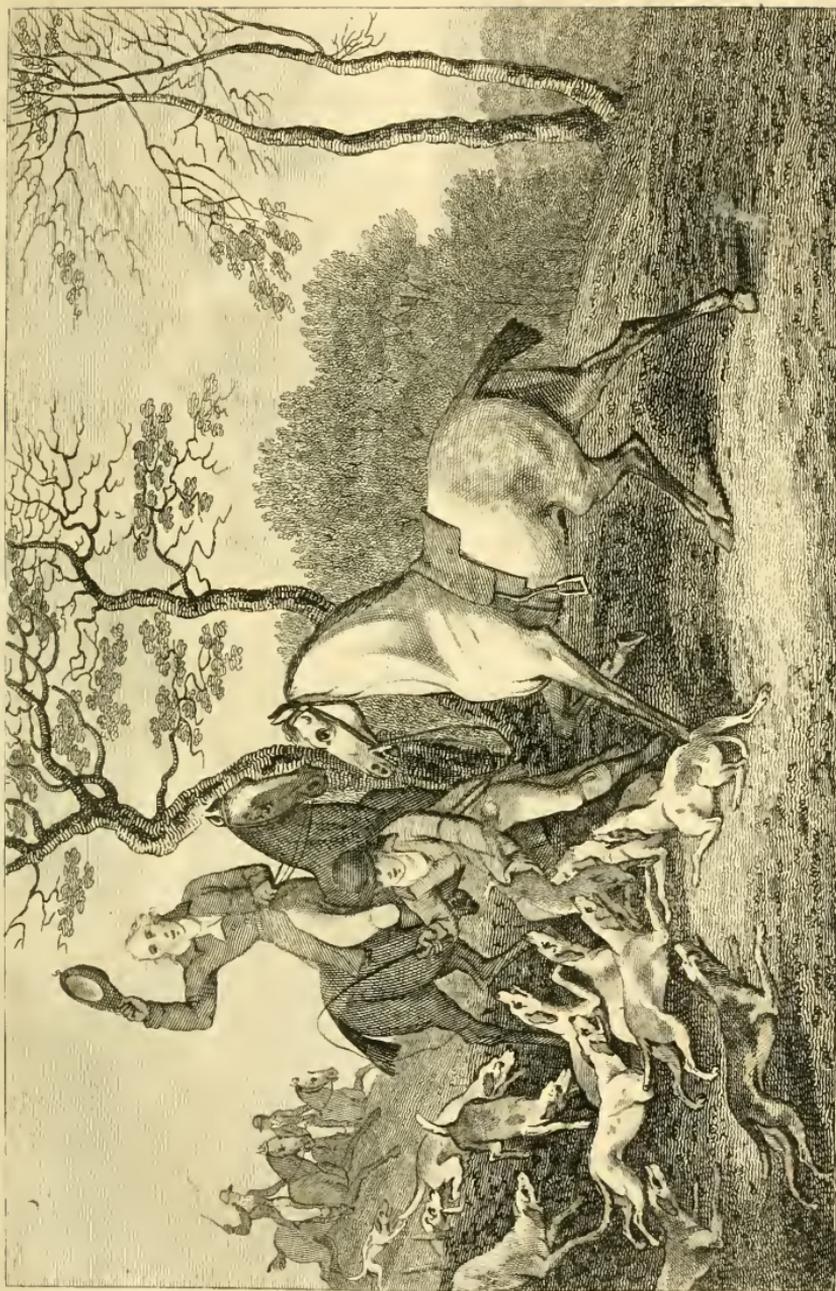

Hark! that halloo is indeed a lucky one.—If we can hold him on, we may yet recover him; for a fox, so much distressed, must stop at last. We shall now see if they will hunt as well as run; for there is but little scent, and the impending cloud still makes that little, less. How they enjoy the scent!—see how busy they all are, and how each in his turn prevails!

Huntsman! be quiet! Whilst the scent was good, you press'd on your hounds; it was well done: when they came to a check, you stood still, and interrupted them not: they were afterwards at fault; you made your cast with judgment, and lost no time. You now must let them hunt;—with such a cold scent as this you can do no good; they must do it all themselves;—lift them now, and not a hound will stoop again.—Ha! a high road, at such a time as this, when the tenderest-nosed hound can hardly own the scent!—Another fault! That man at work, then, has headed back the fox. Huntsman! cast not your hounds now, you see they have over-run the scent; have a little patience, and let them, for once, try back.

We now must give them time:—see where they bend towards yonder furze brake—I wish he may have stopped there!—Mind that old hound, how he dashes o'er the furze; I think he winds him.—Now for a fresh *entapis!* Hark! they halloo!—Aye, there he goes.

It is nearly over with him; had the hounds caught view, he must have died.—He will hardly reach the cover; see how they gain upon him at every stroke!—It is an admirable race! yet the cover saves him.

Now

Cook & Co.

THE DEATH.

Published April 1st 1877. 6s. 1. White, Warwick Square, London.

Now be quiet, and he cannot escape us; we have the wind of the hounds, and cannot be better placed:—how short he runs!—he is now in the very strongest part of the cover.—What a crash! every hound is in, and every hound is running for him. That was a quick turn!—Again another!—he's put to his last shifts.—Now *Mischief* is at his heels, and death is not far off.—Ha! they all stop at once;—all silent, and yet no earth is open. Listen!—now they are at him again!—Did you hear that hound catch him? they over-ran the scent, and the fox had laid down behind them. Now, Reynard, look to yourself!—How quick they all give their tongues!—Little *Dreadnought*, how he works him! the terriers too, they are now squeaking at him.—How close *Vengeance* pursues! how terribly she presses!—it is just up with him!—Gods! what a crash they make; the whole wood resounds!—That turn was very short!—There!—now!—aye, now they have him! Who-hoop!

LETTER XIV.

FOX-HUNTING, however lively and animating it may be in the field, is but a dull, dry subject to write upon; and I can now assure you, from experience, that it is much less difficult to follow a fox-chace than to describe one. You will easily imagine, that to give enough of variety to a single action, to make it interesting, and to describe in a few minutes, the events of, perhaps, as many hours; though it pretend to no merit, has at least some difficulty and trouble; and you will as easily conclude that I am glad they are over.

You desire me to explain that part of my last letter, which says, *if we can hold him on, we may now recover him.*—It means, if we have scent to follow on the line of him, it is probable he will stop, and we may hunt up to him again. You also object to my saying *catch* a fox; you call it a bad expression, and say, that it is not *sportly*; I believe I have not often used it; and when I have, it has been to distinguish betwixt the hunting a fox down, as you do a hare, and the killing of him with hard running.—You tell me, I should
always

always *kill* a fox. I might answer—I must *catch* him first.

You say, that I have not enlivened my chace with many halloos: it is true, I have not; and what is worse, I fear I am never likely to meet your approbation in that particular; for should we hunt together, then, I make no doubt, you will think that I halloo too much; a fault which every one is guilty of who really loves this animating sport, and is eager in the pursuit of it. Believe me, I never could halloo in my life, unless after hounds; and the writing a halloo appears to me almost as difficult as to *pen a whisper*.

Your friend A——, you say, is very severe on us fox-hunters;—no one is more welcome. However, even he might have known, that the profession of fox-hunting is much altered since the time of Sir John Vanburgh; and the intemperance, clownishness, and ignorance of the old fox-hunter, are quite worn out: a much truer definition of one might now be made than that which he has left. Fox-hunting is now become the amusement of *gentlemen*; nor need any gentleman be ashamed of it.

I shall now begin to answer your various questions as they present themselves. Though I was glad of this expedient, to methodise, in some degree,

gree, the variety we have to treat of, yet I was well aware of the impossibility of sufficiently explaining myself in the midst of a fox-chace, whose rapidity, you know very well, brooks no delay; now is the time, therefore, to make good that deficiency: what afterwards remains on the subject of hunting will serve as a supplement to the rest; in which I shall still have it in my power to introduce whatever may be now forgotten, or, give a further explanation of such parts as may seem to you to require it: for since my principal view in writing these letters is to make the instruction they contain of some use to you, if you should want it; if not, to others; the being as clear and explicit as I can, will be far beyond all other considerations. Repetitions, we know, are shocking things; yet, in writing so many letters on the same subject, I fear it will be difficult to avoid them.

First, then, as to the early hour recommended in my former letter:—I agree with you, it requires explanation; but you will please to consider, that you desired me to fix the hour most favourable to the sport, and without doubt it is *an early one*.* You say, that I do not go out so early myself:—it is true, I do not; do physicians

* An early hour is only necessary, where you are not likely to find without a drag.

always follow their own prescriptions? Is it not sufficient that their prescriptions be good? However, if my hounds should be out of blood, I go out early, for then it becomes necessary to give them every advantage. At an early hour, you are seldom long before you find. The morning is the part of the day which generally affords the best scent; and the animal himself, which, in such a case, you are more than ever desirous of killing, is then least able to run away from you. The want of rest, and perhaps a full belly, give hounds a great advantage over him. I expect, my friend, that you will reply to this, "that a fox-hunter, then, is not a *fair sportsman*."—He certainly is not; and what is more, would be very sorry to be mistaken for one. He is otherwise from principle. In his opinion, a fair sportsman, and a foolish sportsman, are synonymous; he, therefore, takes every advantage of the fox he can. You will think, perhaps, that he may sometimes spoil his own sport by this? It is true, he sometimes does, but then he *makes* his hounds; the whole art of fox-hunting being to keep the hounds well in blood. Sport is but a secondary consideration with a fox-hunter; the first is, *the killing of the fox*: hence arises the eagerness of pursuit, chief pleasure of the chase:—I confess, I esteem blood so necessary to a pack of fox-hounds, that with regard to myself, I always return home better pleased with but an indifferent

I

chace,

chace, with death at the end of it, than with the best chace possible, if it end with the loss of the fox. Good chaces, generally speaking, are long chaces; and, if not attended with success, never fail to do more harm to hounds than good. Our pleasures, I believe, for the most part, are greater during the expectation than the enjoyment: in this case, reality itself warrants the idea, and your present success is almost a sure fore-runner of future sport.

I remember to have heard an odd anecdote of the late Duke of R——, who was very popular in his neighbourhood.—A butcher, at Lyndhurst, a lover of the sport, as often as he heard the hounds return from hunting came out to meet them, and never failed to ask the Duke what sport he had? “Very good, I thank you, honest friend.”—“Has your grace killed a fox?”—“No:—We have had a good run, but we have not killed.”—“*Pshaw!*” cried the butcher, looking archly, and pointing at him with his finger.—This was so constantly repeated, that the Duke, when he had not killed a fox, was used to say, *he was afraid to meet the butcher.*

You ask, why the huntsman is to draw so quietly; and, why up the wind? With regard to his drawing quietly, that may depend on the kind of cover before him; and also on the season

of the year. If your covers be small, or such from which a fox cannot break unseen, then noise can do no hurt; if you draw at a late hour, and when there is no drag, then the more the cover is disturbed the better; the more likely you are to find. Late in the season foxes are wild, particularly in covers that are often hunted. If you do not draw quietly, he will sometimes get too much the start of you: when you have any suspicion of this, send on a whipper-in to the opposite side of the cover before you throw in your hounds. With regard to the drawing up the wind, *that* is much more material. You never fail to give the wind to a pointer and setter; why not to a hound?—Besides, the fox, if you draw up the wind, does not hear you coming; and your hounds, by this means, are never out of your hearing; besides, should he turn down the wind, as most probably he will, it lets them all in. Suppose yourself acting directly contrary to this, and then see what is likely to be the consequence.

You think I am too severe on my brother sportsmen: if more so than they deserve, I am sorry for it. I know many gentlemen who are excellent sportsmen, yet, I am sorry to say, the greater number of those who ride after hounds, are not; and it is those only whom I allude to. Few gentlemen will take any pains, few of them will stop a hound, though he should run riot:
close

close beside them, or will stand quiet a moment, though it be to halloo a fox: it is true, they will not fail to halloo if he should come in their way, and they will do the same to as many foxes as they see. Some will encourage hounds which they do not know; it is a great fault: were every gentleman who follows hounds to fancy himself a huntsman, what noise, what confusion would ensue! I consider many of them as gentlemen riding out, and I am never so well pleased as when I see them ride home again. You may perhaps have thought, that I wished them all to be huntsmen—most certainly not; but the more assistants a huntsman has, the better, in all probability, his hounds will be. Good sense, and a little observation, will soon prevent such people from doing amiss; and I hold it as an almost invariable rule in hunting, that those who do not know how to do good are always liable to do harm:* there is scarce an instant, during a whole chace, when a sportsman ought not to be in one particular place:

* This is a better reason, perhaps, why gentlemen ought to understand this diversion, than for the good they may do in it; since a pack of hounds that are well manned will seldom need any other assistance. A gentleman, perceiving his hounds to be much confused by the frequent halloos of a stranger, rode up to him, and thanked him with great civility for the trouble he was taking: but at the same time acquainted him, that the two men he saw in green coats were paid so much by the year, *on purpose to halloo*, it would be needless for him, therefore, to give himself any *further* trouble.

and,

and, I will venture to say, that if he be not *there*, he might as well be in his bed.

I must give you an extraordinary instance of a gentleman's *knowledge* of hunting.—He had hired a house in a fine hunting country, with a good kennel belonging to it, in the neighbourhood of two packs of hounds, of which mine was one; and that he might not offend the owner of either, intended, as he said, to hunt with both. He offered me the use of his kennel, which, for some reasons, I chose to decline; it was afterwards offered to the other gentleman, who accepted it. The first day that the hounds hunted this country he did not appear. The second day, the hounds were no sooner at the cover side than my friend saw an odd figure, strangely accoutred, riding up, with a *spaniel* following him. “Sir,” said he, “it gave me great concern not to be able to attend you when you was here before; I hope you was not offended at it; for, to shew you how well I am inclined to assist your hunt; you see, *I have brought my little dog.*”

I will now give you an instance of another gentleman's *love* of hunting. We were returning from hunting over a very fine country, and upon its being remarked that we had a pleasant ride, he replied, “the best part of the *sport*, in my opinion, is the riding home to dinner afterwards.”

He is, without doubt, of the same opinion with a fat old gentleman I one day overtook upon the road, who, after having asked me, “how many foxes we usually killed in one day—why I did not hunt hare rather than fox, as she was better to eat?”—he concluded, saying, “there is but one part of hunting I likes—*it makes one very hungry.*”

There are two things, which I particularly recommend to you; the one is, to make your hounds steady, the other, to make them all draw. Many huntsmen are fond of having them at their horses heels; but, believe me, they never can get so well, or so soon together, as when they spread the cover: besides, I have often known, when there have been only a few finders, that they have found their fox, gone down the wind, and been heard of no more that day.

Never take out an unsteady old hound; young ones properly awed from riot, and that will stop at a rate, may be put into the pack, a few at a time; but an old hound that is vicious should not escape hanging; let him be ever so good in other respects I will not excuse him; for a pack must be wretched indeed that can stand in need of such assistance.

There

There is infinite pleasure in hearing a fox well found. When you get up to his kennel, with a good drag, the chorus increasing as you go, it inspires a joy more easy to be felt than described. With regard to my own sensations, I would rather hear one fox found in this lively manner, than ride the best hare-chace that ever was run.

Much depends on the first finding of your fox. *Dimidium facti, qui bene cœpit, habet*, which we learned at Westminster, is verified here; for I look upon a fox well found to be half killed. I think people generally are in too great a hurry on this occasion. There is an enthusiasm attending this diversion, which, in this instance in particular, ought always to be restrained.* The hounds are always mad enough when they find their fox; if the men be also mad, they make mad work of it indeed. A gentleman of my acquaintance, who hunts his own hounds, and is not less eager than the rest of us, yet very well knows the bad consequences of being so, to prevent this fault in himself, always begins by taking a pinch of snuff, he then sings part of an old song, “*Some say that care killed the cat,*” &c. By this time his hounds get together, and settle to the scent. He then halloo, and rides as if the d—l drove.

* There are but few instances where sportsmen are not too noisy, and too fond of encouraging their hounds, which seldom do their business so well as when little is said to them.

If the fox break cover, you will sometimes see a young sportsman ride after him. He never fails to ask such a one, “*Do you think you can catch him, Sir?*”—“*No.*”—“*Why then be so good as to let my hounds try—if they can.*”

[The subject which has been chosen as a frontispiece to the present edition of this work, being in some degree analogous to most parts of Letter xiv. it may not be improper in this place to notice the circumstance which occasioned it.

A pack of hounds belonging to his GRACE of BEAUFORT, after a pursuit of many miles, scented Reynard to a cottage at CASTLE COOMBE, where he had taken refuge in a cradle; little time, however, was given him in this retreat, as they almost instantly entered the lovel, seized upon their devoted victim, and dragged him from his lurking place.]

LETTER XV.

I LEFT off just as I had found the fox: I now, therefore, with your leave, will suppose, that the hounds are running him. You desire I would be more particular with regard to the men; it was always my intention. To begin, then, the huntsman ought certainly to set off with his foremost hounds, and I should wish him to keep as close to them afterwards as he conveniently can; nor can any harm arise from it, unless he should not have common sense. No hounds then can slip down the wind, and get out of his hearing; he will also see how far they carry the scent; a necessary requisite; for without it, he never can make a cast with any certainty.

You will find it not less necessary for your huntsman to be active in pressing his hounds forward,* while the scent is good, than to be pru-

* Pressing hounds on, is, perhaps, a dangerous expression; as more harm may be done by pressing them beyond the scent, when it is good, than when it is bad: however, it means no more than to get forward the tail-hounds, and to encourage the others to push on as fast as they can, while the scent serves them.

dent in not hurrying them beyond it, when it is bad. Your's, you say, is a good horseman; it is of the utmost consequence to your sport; nor is it possible for a huntsman to be of much use, who is not; for the first thing, and the very *sine qua non* of a fox-hunter is to ride up to his headmost hounds. It is his business to be ready, at all times, to lend them that assistance they so frequently need, and which, when they are first at a fault, is then most critical. A fox-hound, at that time, will exert himself most; he afterwards cools, and becomes more indifferent about his game. Those huntsmen who do not get forward enough to take advantage of this eagerness and impetuosity, and direct it properly, seldom know enough of hunting to be of much use to them afterwards.

You will, perhaps, find it more difficult to keep your whipper-in back, than to get your huntsman forward; at least, I always have found it so.* It is, however, necessary; nor will a good whipper-in leave a cover whilst a single hound remains in it: for this reason, there should

* Though a huntsman cannot be too fond of hunting, a whipper-in easily may. His business will seldom allow him to be forward enough with the hounds to see much of the sport: his only thought, therefore, should be to keep the hounds together, and to contribute, as much as he can, to the killing of the fox,

be two; one of whom should always be forward with the huntsman. You cannot conceive the many ills that may happen to hounds that are left behind. I do not know that I can enumerate one half of them; but of this you may be certain, that the keeping them together is the surest means to keep them steady. When left to themselves, they seldom refuse any blood they can get; they acquire many bad habits; they become conceited, a terrible fault in any animal; and they learn to tye upon the scent, an unpardonable fault in a sex-hound: besides this, they frequently get a trick of hunting by themselves, and they seldom are worth much afterwards. The lying out in the cold, perhaps the whole night, can do no good to their constitutions, nor will the being worried by sheep-dogs or mastiffs be of service to their bodies: all this, however, and much more, they are liable to. I believe I mentioned, in my fourth letter, that the straw-house door should be left open when any hounds are missing.

Every country is soon known, and nine foxes out of ten, with the wind in the same quarter, will follow the same track. It is easy, therefore, for the whipper-in to cut short, and catch the hounds again; at least it is so in the country where I hunt. With a high scent you cannot push on hounds too much. Screams keep the

fox forward, at the same time that they keep the hounds together, or let in the tail-hounds;* they also enliven the sport, and if discreetly used, are always of service; but, in cover, they should be given with the greatest caution.

Most fox-hunters wish to see their hounds run in a good style; I confess, I am myself one of those. I hate to see a string of them, nor can I bear to see them creep, where they can leap. It is the dash of the fox-hound which distinguishes *him* as truly, as the motto of William of Wickham distinguishes *us*. A pack of harriers, if they have time, may kill a fox; but I defy them to kill him in the style in which a fox ought to be killed; they must hunt him down. If you intend to tire him out, you must expect to be tired also yourself: I never wish a chase to be less than one hour, or to exceed two: it is sufficiently long, if properly followed; it will seldom be longer, unless there be a fault somewhere—either in the day, in the huntsman, or in the hounds. What Lord Chatham once said

* Halloos seldom do any hurt, when you are running up the wind; for then, none but the tail-hounds can hear you: when you are running down the wind, you should halloo no more than may be necessary to bring the tail-hounds forward, for a hound that knows his business seldom wants encouragement when he is upon a scent.

of a battle, is particularly applicable to a fox-chace: it should be *short, sharp, and decisive*.

There is, I believe, but little difference in the speed of hounds of the same size; the great difference is in the head they carry; and in order that they may run well together, you should not keep too many old hounds: after five or six seasons, they generally do more harm than good. If they tie upon the scent, and come hunting after, hang them up immediately, let their age be what it may; there is no getting such conceited devils on; they will never come to a halloo, which every hound that is off the scent, or behind the rest, should not fail to do; and they are always more likely to draw you back than help you forward.*

You think me too severe on skirthers. I must confess, that I have but one objection to them,

* From this passage, the critic endeavours to prove the sportsman's ingratitude; and yet common sense, I believe, induces most men to rid themselves of that which if kept would be prejudicial to them. The critic seems to allude to a well-known fable of Æsop, but is not very happy in the application. He has also mis-quoted the passage—the author does not say *tire*, but *tye* upon the scent. Good hounds, when they become aged, are liable to the first; bad ones only are guilty of the last. In either case, death is not meant as a punishment, nor is it considered as a misfortune.—Vide Monthly Review.

and

and it is *this*: I have constantly seen them do more *harm* than *good*.

Changing from the hunted fox to a fresh one, is as bad an accident as can happen to a pack of fox-hounds, and requires all the observation and all the ingenuity that man is capable of to guard against it. Could a fox-hound distinguish a hunted fox, as the deer-hound does the deer that is blown, fox-hunting would then be perfect. There are certain rules that ought to be observed by huntsmen. A huntsman should always listen to his hounds, whilst they are running in cover; he should be particularly attentive to the headmost hounds, and he should be constantly on his guard against a skirter, for if there be two scents, he must be wrong. Generally speaking, the best scent is least likely to be that of the hunted fox; and as a fox seldom suffers hounds to run up to him as long as he is able to prevent it, so, nine times out of ten, when foxes are hallooed early in the day, they are all fresh foxes. The hounds most likely to be right are the hard-running line-hunting hounds, or such as the huntsman knows had the lead, before there arose any doubt of changing. With regard to the fox, if he break over an open country, it is no sign that he is hard run; for they seldom at any time will do that, unless they be a great way before the hounds. Also, if he run up the wind—they seldom

dom ever do that when they have been long hunted, and grow weak; and when they run their foil, *that* also may direct him. All this, as you will perceive, requires a good ear and nice observation; and indeed, in that consists the chief excellence of a huntsman.

When the hounds divide, and are in two parts, the whipper-in, in stopping, must attend to the huntsman, and wait for his halloo, before he attempts to stop either: for want of proper management in this particular, I have known the hounds stopped at both places, and both foxes lost by it. If they have many scents, and it is quite uncertain which is the hunted fox, let him stop those that are farthest down the wind, as they can hear the others, and will reach them soonest: in such a case, there will be little use in stopping those that are up the wind.

When hounds are at a check, let every one be silent, and stand still: but as I have already said so much on that head in my eleventh letter on hare-hunting, I beg leave to refer you to it. Whippers-in are frequently at this time coming on with the tail-hounds. They should never halloo to them, when the hounds are at fault; the least thing does hurt at such a time, but a halloo more than any other. The huntsman, at a check, had better let his hounds alone, or content

tent himself with holding them forward, without taking them off their noses. Hounds that are not used to be cast, *à tout bout de champ* will of themselves acquire a better cast than it is in the power of any huntsman to give them; will spread more, and try better for the scent; and, if in health and spirits, will want no encouragement.

Should they be at fault, after having made their own cast, (which the huntsman should always first encourage them to do) it is then his business to assist them further; but, except in some particular instances, I never approve of their being cast as long as they are inclined to hunt. The first cast I bid my huntsman make is generally a regular one; not choosing to rely entirely on his judgment: if that should not succeed, he is then at liberty to follow his own opinion, and proceed as observation and genius may direct. When such a cast is made, I like to see some mark of good sense and meaning in it; whether down the wind, or towards some likely cover, or strong earth: however, as it is at best uncertain, and as the huntsman and the fox may be of different opinions, I always wish to see a regular cast, before I see a knowing one; which, as a last resource, should not be called forth, till it be wanted: the letting hounds alone is but a negative goodness in a huntsman; whereas, it is
true,

true, this last shows real genius; and to be perfect, it must be born with him. There is a fault, however, which a knowing huntsman is too apt to commit: he will find a fresh fox, and then claim the merit of having recovered the hunted one. It always is dangerous to throw hounds into a cover to retrieve a lost scent; and, unless they hit him in, is not to be depended on. Driven to the last extremity, should a knowing cast not succeed, your huntsman is in no wise blameable: mine, I remember, lost me a good chace, by persevering too long in a favourite cast; but he gave me so many good reasons why the fox *ought* to have gone that way, that I returned perfectly well satisfied, telling him, at the same time, that, *if the fox was a fool, he could not help it.*

Gentlemen, when hounds are at fault, are too apt themselves to prolong it. They should always stop their horses some distance behind the hounds, and, if it be possible to remain silent, this is the time to be so: they should be careful not to ride before the hounds, or over the scent; nor should they ever meet a hound in the face, unless with a design to stop him. Should you at any time be before the hounds, turn your horse's head the way they are going, get out of their track, and let them pass by you.

In dry weather, foxes, particularly in heathy countries, will run the roads. If gentlemen, at such times, will ride close upon the hounds, they may drive them miles, without any scent.* High-mettled fox-hounds are seldom inclined to stop whilst horses are close at their heels.

An acquaintance of mine, a good sportsman, but a very warm one, when he sees the company pressing too close upon his hounds, begins with crying out, as loud as he can, *hold hard*. If any one should persist after that, he begins moderately at first, and says, *I beg, Sir, you will stop your horse:—Pray, Sir, stop:—God bless you, Sir, stop;—God d—n your blood, Sir, stop your horse.*

I am now, as you may perceive, in a very violent passion; so I will e'en stop the continuation of this subject till I be cool again.

* No one should ever ride in a direction which, if persisted in, would carry him amongst the hounds, unless he be at a great distance behind them.

LETTER XVI.

I ENDED my last letter, I think, in a violent passion. The hounds, I believe, were at fault also. I shall now continue the further explanation of my thirteenth letter from that time.

The first moment that hounds are at fault is a critical one for the sport: people then should be very attentive. Those who look forward perhaps may see the fox, or the running of sheep, or the pursuit of crows, may give them some tidings of him. Those who listen may sometimes take a hint which way he is gone, from the chattering of a magpie; or, perhaps, be at a certainty, from a distant halloo: nothing that can give any intelligence, at such a time, is to be neglected. Gentlemen are too apt to ride all together: were they to spread more, they might sometimes be of service; particularly those who, from a knowledge of the sport, keep down the wind: it would then be difficult for either hounds, or fox, to escape their observation.

You should, however, be cautious how you go to a halloo. The halloo itself must, in a great measure, direct you; and though it afford

no certain rule, yet you may frequently guess by it whether it may be depended on or not. At the fowing time, when boys are bird-keeping, if you be not very much on your guard, their halloo will sometimes deceive you. It is best, when you are in doubt, to send on a whipper-in to know; the worst then that can befall you is the loss of a little time; whereas, if you gallop away with the hounds to the halloo, and are obliged to return, it is a chance if they try for the scent afterwards: on the other hand, if, certain of the halloo, you intend going to it; then the sooner you get to it the better. I have been more angry with my huntsman, for being slow at a time like this, than for any other fault whatsoever. Huntsmen who are slow at getting to a halloo, are void of common sense.

They frequently commit another fault by being in too great a hurry when they get there. It is hardly credible how much our eagerness is apt, at such a time, to mislead our judgment: for instance, when we get to the halloo, the first questions are natural enough. Did you see the fox? Which way did he go? The man points with his finger, perhaps, and then away you all ride as fast as you can; and in such a hurry, that not one will stay to hear the answer to the question which all were so ready to ask: the general consequence of which is, you mistake the place, and
are

are obliged to return to the man for better information. Depend upon it, the less you hurry on this occasion the more time you save; and wherever the fox was seen for a certainty, whether near or distant, that will not only be the surest, but also the best place to take the scent; and, besides the certainty of going right, you probably will get on faster than you would by any other means.

That halloos are not always to be depended on will be sufficiently evinced by the following instances:

My hounds being at a long fault, a fellow hallooed to them from the top of a rick, at some distance off. The huntsman, as you may believe, stuck spurs to his horse, hallooed till he was almost hoarse, and got to the man as quickly as he could: the man still kept hallooing, and as the hounds got near him, "*Here,*" said he—"*here—here, the fox is gone.*"—"Is he far before us?" cried the huntsman. "How long ago was it that you saw him?"—"No, master, I have not *seen him*, but I *smelt him* here this morning, when I came to serve my sheep."

Another instance was this: we were trying with some deer-hounds for an out-lying stag, when we saw a fellow running towards us in his

shirt: we immediately concluded that we should hear some news of the stag, and set out joyfully to meet him. Our first question was, if he had seen the stag? “No, Sir, I have not seen him, *“ but my wife dreamt as how she saw him t’other night.”*”

Once a man hallooed us back a mile, only to tell us *that we were right before*, and we lost the fox by it.

A gentleman, seeing his hounds at fault, rode up to a man at plough, and with great eagerness asked him, if he had seen the fox? “The fox, Sir!”—“Yes, d—n you, the fox! Did you never see a fox?”—“Pray, Sir, if I may be so bold, what sort of a looking creature may he be? has he *short ears* and a *long tail*?”—“Yes.”—“Why then, I can assure you, Sir, I have seen *no such thing*.”

We are agreed, that hounds ought not to be cast as long as they are able to hunt; and though the idea, that a hunted fox never stops, is a very necessary one to a fox-hunter, that he may be active, and may lose no time; yet tired foxes will stop, if you can hold them on; and I have known them stop, even in wheel-ruts, on the open down, and leap up in the midst of the hounds. A tired fox ought not to be given up,
for

for he is killed sometimes very unexpectedly. If hounds have ever pressed him, he is worth your trouble; perseverance may recover him, and, if recovered, he most probably will be killed; nor should you despair, whilst any scent remains. The business of a huntsman is only difficult when the scent dies quite away; and it is then he may shew *his* judgment, when the hounds are no longer able to shew *theirs*. The recovering a lost scent, and getting nearer to the fox by a long cast, requires genius, and is, therefore, what few huntsmen are equal to. When hounds are no longer capable of feeling the scent, it all rests with the huntsman; either the game is entirely given up, or is only to be recovered by him, and is the effect of real genius, spirit, and observation.

When hounds are at cold hunting, with a bad scent, it may then be a proper time to send a whipper-in forward; if he can see the fox, a little mobbing, at such a time as this, may reasonably be allowed.

When hounds are put to a check on a high road, by the fox being headed back, if in that particular instance you suffer them to try back, it gives them the best chance of hitting off the scent again, as they may try on both sides at once.

When hounds are running in cover, you cannot be too quiet. If the fox be running short, and the hounds are catching him, not a word should then be said: it is a difficult time for hounds to hunt him, as he is continually turning, and will sometimes lie down, and let them pass him.

I have remarked, that the greatest danger of losing a fox is at the first finding of him, and when he is sinking; at both of which times he frequently will run short, and the eagerness of the hounds is too apt to carry them beyond the scent. When a fox is first found, I wish every one would keep behind the hounds, till they are well settled to the scent; and when the hounds are catching him, I wish them to be as silent as they can.

When he is caught, I like to see hounds eat him eagerly. In some countries, I am told, they have a method of *treeing* him;* it is of use to make the hounds eager; it lets them all in; they recover their wind, and eat him more readily. I should advise you, at the same time, not to keep him too long, as I do not imagine the hounds

* The intention of it is to make the hounds more eager, and to let in the tail-hounds. The fox is thrown across the branch of a tree, and the hounds are suffered to bay at him for some minutes, before he is thrown amongst them.

have any appetite to eat him, longer than whilst they are angry with him.

When two packs of fox-hounds run together, and they kill the fox, the pack that found him is entitled to the head. Should both have found, how is it to be determined then? The huntsman who gets in first seems, in my opinion, to have the best right to it; yet to prevent a dispute, (which, of course, might be thought a wrong-headed one) would he not do well to cut off the head, and present it to the other huntsman?

The same author, whom I quoted in my tenth letter, and who tells us, how we should *not eat a hare*, is also kind enough to tell us when we *should eat a fox*; I wish he had also added the best manner of *dressing him*: we are obliged to him, however, for the following information:—
 “ *La chair du Renard est moins mauvaise que celle du loup; les chiens et même les Hommes en mangent en automne, surtout lorsqu’il s’est nourri et engraisé de raisins.*”—You would have been better pleased, I make no doubt, if the learned gentleman had instructed you *how to hunt him*, rather than *when to eat him*.

I shall end this letter with an anecdote of a late huntsman of mine, who was a great slip-slop, and always called successively, *successfully*. One
 O 3 day,

day, when he had been out with the young hounds, I sent for him in, and asked him what sport he had had, and how the hounds behaved?

“ Very great sport, Sir, and no hounds could behave any better.” — “ Did you run him long?” — “ They ran him, and please your honour, upwards of three hours *successfully*.” — “ So, then, you *did* kill him?” — “ Oh, no, Sir, *we lost him at last*.”

LETTER XVII.

FOX-HUNTING, an acquaintance of mine says, is only to be followed because you can ride hard, and do less harm in that than in any other kind of hunting. There may be some truth in the observation; but, to such as love the riding part only of hunting, would not a trail scent be more suitable? Gentlemen who hunt for the sake of a ride, who are indifferent about the hounds, and know little of the business, if they do no harm, fulfil as much as we have reason to expect from them; whilst those of a contrary description, do good, and have much greater pleasure. Such as are acquainted with the hounds, and can at times assist them, find the sport more interesting; and frequently have the satisfaction to think, that they themselves contribute to the success of the day. This is a pleasure you often enjoy; a pleasure, without any regret attending it. I know not what effect it may have on you; but I know that my spirits are always good after good sport in hunting; nor is the rest of the day ever disagreeable to me. What are other sports compared to this, which is full of enthusiasm! fishing is, in my opinion, a dull diversion;---shooting, though it admit of a companion, will not allow of many:---both therefore may be

considered as selfish and solitary amusements, compared with hunting; to which, as many as please are welcome. The one might teach patience to a philosopher; and the other, though it occasion great fatigue to the body, seldom affords much occupation to the mind. Whereas fox-hunting is a kind of warfare;---its uncertainties, its fatigues, its difficulties, and its dangers, rendering it interesting above all other diversions.—— That you may more readily pardon this digression, I return to answer your letter now before me.

I am glad to hear that your men have good voices; mine, unluckily, have not. There is a friend of mine, who hunts his own hounds; his voice is the strangest, and his halloos the oddest I ever heard. He has, however, this advantage:---no dog can possibly mistake his halloo for another's. Singularity constitutes an essential part of a huntsman's halloo:---it is for that reason alone, I prefer the horn, to which, I observe, hounds fly more readily than to the huntsman's voice. Good voices certainly are pleasing; yet it might be as well, perhaps, if those who have them, were less fond of exerting them. When a fox is halloosed, those who understand this business, and get forward, may halloo him again;*

yet

* Should a fox be halloosed in cover, while the hounds are at fault; if they be long in coming, by getting forward you may halloo

yet let them be told if the hounds go the contrary way, or do not seem to come on upon the line of him, to halloo no more. With regard to its being the hunted fox; the fox which every man halloos, is the hunted fox in his own opinion, though he seldom has a better reason for it, than because *he saw him*.—Such halloos as serve to keep the hounds together, and to get on the tail hounds, are always of use: halloos of encouragement to leading hounds, if injudiciously given, may spoil your sport. I am sorry to say view halloos frequently do more harm than good.—They are pleasing to sportsmen, but prejudicial to hounds. If a strong cover be full of foxes, and they be often halloosed, hounds seldom take much pains in hunting them; hence arises that indifference, which sometimes is to be perceived in fox-hounds while pursuing their game.

You ask me, if I would take off my hounds to a halloo?—If they be running with a good scent, I most certainly would not; if otherwise, and I

halloo the fox again; perhaps, before the hounds are laid on; by which means you will get nearer to him. In cases like this, a good sportsman may be of great use to hounds. There are days when hounds will do their business best if let quite alone; and there are days, when they can do nothing without assistance.—Let them be assisted at no other time. Of a bad scenting day, or when hounds may be over-matched, you cannot assist them too much.

could depend upon the halloo, in some cases I would: for instance, when the fox is a great way before them, or persists in running his foil; for such foxes are difficult to kill, unless you endeavour to get nearer to them by some means or other.—When you hunt after them, it will frequently happen that the longer you run, the further you will be behind,

If hounds be out of blood, and a fox run his foil, you need not scruple to stop the tail hounds, and throw them in at head; or, if the cover have any ridings cut in it, and the fox be often seen, your huntsman, by keeping some hounds at his horse's heels, at the first halloo that he hears, may throw them in close at him.*—This will put him out of his pace, and perhaps, put him off his foil. It will be necessary, when you do this, that the whipper-in should stop the pack from hunting after, and get forward with them to the huntsman. I have already given it as my opinion, that hounds may be halloocd too much. If they

* Nothing is meant more than this—"that the huntsman should get the tail hounds off the line of the scent, (where they do more harm than good,) and encourage them forward; if he should hear a halloo, whilst these hounds are off the scent, he should lay them on to it; if he should not, the tail hounds, by this means, may still stand a chance of getting to the head hounds by the ear, which they never could do, if they continued to run by the nose.

should have been often used to a halloo, they will expect it; and may trust, perhaps, to their ears, and eyes, more than to their noses. If they be often taken from the scent, it will teach them to shuffle, and probably will make them slack in cover: it should be done, therefore, with great caution; not too often; and always should be well-timed. Famous huntsmen, I think, by making too frequent a use of this, sometimes hurt their hounds. I have heard of a sportsman, who never suffers his hounds to be lifted; he lets them pick along the coldest scent, through flocks of sheep: this is a particular style of fox-hunting, which, perhaps, may suit the country in which that gentleman hunts. I confess to you, I do not think it would succeed in a bad scenting country, or indeed, in any country where foxes are wild;—whilst hounds can get on with the scent, it cannot be right to take them off from it; but when they are stopped for want of it, it cannot then be wrong to give them every advantage in your power.

It is wrong to suffer hounds to hunt after others that are gone on with the scent, particularly in cover; for how are they to get up to them with a worse scent; besides, it makes them tye on the scent, teaches them to run dog, and destroys that laudable ambition of getting forward, which is the chief excellence of a fox-hound. A good
huntsman

huntſman will ſeldom ſuffer his head hounds to run away from him; if it ſhould ſo happen, and they be ſtill within his hearing, he will ſink the wind with the reſt of the pack, and get to them as faſt as he can.—Though I ſuffer not a pack of fox-hounds to hunt after ſuch as may be a long way before the reſt, for reaſons which I have juſt given; yet, when a ſingle hound is gone on with the ſcent, I ſend a whipper-in to ſtop him. Were the hounds to be taken off the ſcent to get to him, and he ſhould no longer have any ſcent when they find him, the fox might be loſt by it. This is a reaſon, why in large covers, and particularly ſuch as have many roads in them, ſkirting hounds ſhould be left at home on windy days.

Skirters, I think, you may find hurtful, both in men and dogs. Such as ſkirt to ſave their hories, often head the fox. Good ſportſmen never quit hounds, but to be of ſervice to them: with men of this deſcription, ſkirting becomes a neceſſary part of fox-hunting, and is of the greateſt uſe. Skirters! beware of a furze-brake. If you head back the fox, the hounds moſt probably will kill him in the brake. Such as ride after the hounds, at the ſame time that they do no good, are leaſt likely to do harm; let ſuch only as underſtand the buſineſs, and mean to be of ſervice to the hounds, ride wide of them; I cannot

cannot however allow, that the riding close up to hounds is always a sign of a good sportsman; if it were, a *monkey*, upon a good horse, would be the best sportsman in the field.—Here must I censure, (but with respect) that eager spirit which frequently interrupts, and sometimes is fatal to sport in fox-hunting; for, though I cannot subscribe to the doctrine of my friend ****, “ that
“ a pack of fox-hounds would be better without
“ a huntsman, than with one; and that if left to
“ themselves, they would never lose a fox;”—yet, allowing them their usual attendants, had he objected only to the sportsmen who follow them, I must have joined issue with him. Whoever has followed hounds, must have seen them frequently hurried beyond the scent; and whoever is conversant in hunting, cannot but know, that the steam of many horses, carried by the wind, and mixed with a cold scent, is prejudicial to it.

It sometimes will happen, that a good horseman is not so well in with hounds, as an indifferent one; because he seldom will condescend to get off his horse. I believe, the best way to follow hounds across a country, is to keep on the line of them, and to dismount at once, when you come to a leap which you do not choose to take; for in looking about for easier places, much time is lost. In following hounds, it may be useful to you to know, that when in cover they run up
the

the wind, you cannot in reason be too far behind them, as long as you have a perfect hearing of them, and can command them; and on the contrary, when they are running down the wind, you cannot keep too close to them.

You complain that foxes are in too great plenty; believe me, it is a good fault. I should as soon have expected to have heard your old acquaintance, Jack R——, complain of having too much money; however, it is not without a remedy; hunt the same covers constantly, and you will soon disperse them. If your pack be strong enough, divide it; hunt every day, and you will catch many tired foxes. I remember to have killed a brace in one morning, in the strongest season; the first in ten minutes, the second in half an hour.—If your own pack be not strong enough to hunt more than every other day, get a pack of harriers to hunt hare in the cover the intermediate day. Foxes thus disturbed, will shift their quarters; they know their enemies, and smell in the night, where they have been in the day, and will not stay where they are likely to be disturbed by them. Follow them for one week in this manner, and I do not think you will have any reason, afterwards, to complain that they are in too great plenty.

When covers are much disturbed, foxes will sometimes break as soon as they hear a hound. Where the country round is very open, the fox least likely to break is that which you are hunting; *he* will be very unwilling to quit the cover, if it be a large one, unless he can get a great distance before the hounds. Should you be desirous to get a run over such a country, the likeliest means will be, to post a quiet and skilful person to halloo one off, and lay on to him. The further he is before you, the less likely he will be to return. The best method, however, to hunt a cover like this, is to stick constantly to it, not suffering the hounds to break, so long as one fox shall remain; do this two or three hunting days following; foxes will then fly, and you will have good chaces.

Nothing is more hurtful to hounds than the frequent changing of their country; should they change from a good scenting country to a bad one, unless they have luck on their sides, they may be some time without killing a fox; whereas hounds have always a great advantage in a country which they are used to. They not only know better where to find their game, but they will also pursue it with more alacrity afterwards.

This letter began by a digression in favour of hunting; it will end with the opinion of a Frenchman, not so favourable to it. This Gentleman

tleman was in my neighbourhood on a visit to the late Lord Castlehaven, who, being a great sportsman, thought he could not oblige his friend more, than by letting him partake of an amusement, which he himself was so fond of; he therefore mounted him on one of his best horses, and shewed him a fox-chace. The Frenchman, after having been well shaken, dirted, tired, run away with, and thrown down, was asked, on his return, "*comment il avoit trouvé la chasse?*" --- "*Mor-bleu! Milord,*" said he, shrugging up his shoulders, "*votre chasse est une chasse diabolique.*"

L E T T E R XVIII.

BEFORE I proceed on my subject, give me leave to set you right in one particular, where I perceive you have misunderstood me. You say, you little expected to see the abilities of a huntsman degraded beneath those of a whipper-in. This is a serious charge against me as a sportsman; and though I cannot allow that I have put the cart before the horse, in the manner you are pleased to mention; yet you have made it necessary for me to explain myself further.

I must therefore remind you, that I speak of my own country only, a country full of riot; where the covers are large, and where there is a chace full of deer, and full of game. In such a country as this, you that know so well how necessary it is for a pack of fox-hounds to be steady, and to be kept together, ought not to wonder that I should prefer an excellent whipper-in to an excellent huntsman. No one knows better than yourself, how essential a good adjutant is to a regiment: believe me, a good whipper-in is not less necessary to a pack of fox-hounds. But I must beg you to observe, I mean only, *that I*

P

could

could do better with mediocrity in the one than in the other. If I have written any thing in a former letter that implies more, I beg leave to retract it in *this*. Yet I must confess to you, that a famous huntsman I am not very ambitious to have; unless, it necessarily followed, that he must have *famous hounds*: a conclusion I cannot admit, as long as these, so famous gentlemen, will be continually attempting themselves to do what would be much better done if left to their hounds; besides, they seldom are good servants, are always conceited, and sometimes impertinent. I am very well satisfied if my huntsman be acquainted with his country and his hounds; if he ride well up to them, and if he have some knowledge of the nature of the animal which he is in pursuit of; but so far am I from wishing him to be famous, that I hope he will still continue to think his hounds know best how to hunt a fox.

You say you agree with me, that a huntsman should stick close to his hounds. If then his place be fixed, and that of the first whipper-in (where you have two) be not, I cannot but think genius may be at least as useful in one as in the other: for instance, while the huntsman is riding to his headmost hounds, the whipper-in, if he have genius, may shew it in various ways; he may clap forward to any great earth that may, by chance,

chance, be open; he may sink the wind to halloo, or mob a fox, when the scent fails; he may keep him off his foil; he may stop the tail hounds, and get them forward; and has it frequently in his power to assist the hounds without doing them any hurt, provided he should have sense to distinguish where he may be chiefly wanted. Besides, the most essential part of fox-hunting, the making and keeping the pack steady, depends entirely upon him; as a huntsman should seldom rate, and never flog a hound. In short, I consider the first whipper-in as a second huntsman; and, to be perfect, he should be not less capable of hunting the hounds than the huntsman himself.

You cannot too much recommend to your whipper-in to get to the head of his hounds, before he attempts to stop them. The rating behind is to little purpose, and if they should be in cover, may prevent him from knowing who the culprits are. When your hounds are running a fox, he then should content himself with stopping such as are riotous, and should get them forward. They may be condemned upon the spot, but the punishment should be deferred till the next day, when they may be taken out on purpose to commit the fault, and suffer the punishment. I agree with you, that young hounds cannot be awed too much; yet suffer not your punishment of

them to exceed their offence. I could wish to draw a line betwixt justice and barbarity.*

A whipper-in, while breaking in young hounds, sometimes will rate them before they commit the fault: this may, perhaps, prevent them for that time, but they will be just as ready to begin the next opportunity. Had he not better let them quite alone till he see what they would be at? The discipline then may be proportioned to the degree of the offence. Whether a riotous young hound run little or much is of small consequence if he be not encouraged; it is the blood only that signifies, which in every kind of riot should carefully be prevented.†

* I am sorry that it should be necessary to explain what I mean by *barbarity*. I mean *that* punishment, which is either unnecessarily inflicted; which is inflicted with severity; or from which no possible good can arise. Punishment, when properly applied, is not cruelty, is not revenge, it is justice; it is even mercy. The intention of punishment is to prevent crimes, and, consequently, to prevent the necessity of punishing.

† It is not meant that hounds should be suffered to continue on a wrong scent longer than may be necessary to know that the scent *is* a wrong one. This passage refers to page 88, where the author's meaning is more fully explained. It is introduced here more strongly to mark the danger of encouraging hounds on a wrong scent, and indulging them afterwards in the blood of it.

My general orders to my whipper-in are, if when he rate a hound, the hound does not mind him, to take him up immediately, and give him a severe flogging. Whippers-in are too apt to continue rating, even when they find that rating will not avail. There is but one way to stop such hounds, which is to get to the heads of them.— I will also tell him, never on any account to strike a hound, unless the hound be at the same time sensible what it is for.—What think you of the whipper-in who struck a hound as he was going to cover, because he was likely to be noisy afterwards, saying, “*you will be noisy enough by and by, I warrant you.*” Whippers-in, when left to themselves, are rare judges of propriety! I wish they would never strike a hound that does not deserve it, and would strike those hard that do. They seldom distinguish sufficiently the degrees of offence which a dog may have committed, to proportion their punishment accordingly; and such is their stupidity, that when they turn a hound after the huntsman, they will rate him as severely as if he had been guilty of the greatest fault.

It is seldom necessary to flog hounds to make them obedient, since obedience is the first lesson they are taught. Yet, if any should be more riotous than the rest, they may receive a few cuts in the morning before they leave the kennel.

When hounds prove unsteady, every possible means should be taken to make them otherwise. A hare, or a deer, put into the kennel amongst them, may then be necessary. Huntsmen are too fond of kennel discipline. You already know my opinion of it. I never allow it but in cases of great necessity. I then am always present myself to prevent excess. To prevent an improper and barbarous use of such discipline, I have already told you, is one of the chief objects of these letters. If what Montaigne says be true, that "there is a certain general claim of kindness and benevolence which every creature has a right to from us," surely we ought not to suffer unnecessary severity towards an animal to whom we are obliged for so much diversion; and what opinion must we have of the huntsman who inflicts it on one to whom *he* owes his daily bread.*

* "Perhaps it is not the least extraordinary circumstance in these flogging lectures, that they should be given with Montaigne, or any other moral author whatever, in recollection at the same instant!" (Vide Monthly Review.) Perhaps it is not the least extraordinary circumstance in these criticisms, that this passage should have been quoted as a proof of the author's inhumanity.—The critic ends his strictures with the following exclamation: "Of a truth, a sportsman is the most uniform, consistent character, from his own representation, that we ever contemplated!" and yet, perhaps, there are sportsmen to be found, possessed of as tender feelings of humanity as any critic whatsoever. The motto prefixed to these letters, if it had been attended to, might have entitled the author to more candour than the critic has thought fit to bestow upon him.

If

If any of my hounds be very riotous, they are taken out by themselves on the days when they do not hunt, and properly punished; and this is continued whilst my patience lasts, which, of course, depends on the value of the dog. It is a trial betwixt the whipper-in and the dog, which will tire first; and the whipper-in, I think, generally prevails. If this method will not make them steady, no other can; they then are looked upon as incorrigible, and are put away.

Such hounds as are notorious offenders should also feel the lash and hear a rate as they go to the cover; it may be an useful hint to them, and may prevent a severer flogging afterwards. A sensible whipper-in will wait his opportunity to single out his hound; he will then hit him hard, and rate him well, whilst a foolish one will often hit a dog he did not intend to hit; will ride full gallop into the midst of the hounds; will, perhaps, ride over some of the best of them, and put the whole pack into confusion—this is a manœuvre I cannot bear to see.

Have a care! are words which seldom do any harm; since hounds, when they are on a right scent, will not mind them. Let your whipper-in be careful how he *encourage* the hounds; that, improperly done, may spoil your pack.

A whipper-in will rate a hound, and then endeavour to flog him. A dog, after having been rated, will naturally avoid the whip. Tell your whipper-in, whenever a hound shall deserve the lash, to whip him first, and rate him afterwards.

When there are two whippers-in, one ought always to be forward. When there is only *one*, he, to be perfect, should be a very *Mungo*, *here*, *there*, and *every where*.

You will find it difficult to keep your people in their proper places; I have been obliged to stop back myself to bring on hounds which my servants had left behind. I cannot give you a greater proof how necessary it is that a whipper-in should bring home all his hounds, than by telling you, that I had lost an old hound for ten days, and sent all the country over to inquire after him; and at last, when I thought no more about him, in drawing a large cover in the country where he had been lost, he joined the pack; he was exceedingly emaciated, and it was a long time before he recovered: how he subsisted all that time I cannot imagine. When any of your hounds may be missing, you should send the whipper-in back immediately to look for them; it will teach him to keep them more together.

The getting forward the tail hounds is a necessary part of fox-hunting, in which you will find a good whipper-in of the greatest use. He must also get forward himself at times, when the huntsman is not with the hounds; but the second whipper-in (who frequently is a young lad, ignorant of his business) on no account ought to encourage or rate a hound, but when he is quite certain it is right to do it; nor is *he* ever to get forward, so long as a single hound remains behind.

Halloo forward is certainly a necessary and a good halloo, but is it not used too indiscriminately? it is for ever in the mouth of a whipper-in. If your hounds be never used to that halloo till after a fox be found, you will see them fly to it. At other times other halloos will answer the purpose of getting them on as well. *Halloo forward* being used as soon as the game is on foot, it seems as if another halloo were necessary to denote the breaking cover. *Away! away!* might answer that purpose. Gentlemen who are kind enough to stop back to assist hounds, should have notice given them when the hounds leave the cover.

Most huntsmen, I believe, are jealous of the whipper-in; they frequently look on him as a successor, and therefore do not very readily admit him into the kennel; yet, in my opinion, it is
 necessary

necessary that he should go thither, for he ought to be well acquainted with the hounds, who should know and follow him as well as the huntsman.

To recapitulate what I have already said: if your whipper-in be bold and active; be a good and careful horseman; have a good ear and a clear voice; if, as I said, he be a very *Mungo*, having, at the same time, judgment to distinguish where he can be of most use; if, joined to these, he be above the foolish conceit of killing a fox without the huntsman; but, on the contrary, be disposed to assist him all he can, he then is a perfect whipper-in.

I am sorry to hear that your hounds are so unsteady; it is scarcely possible to have sport with unsteady hounds; they are half tired before the fox is found, and are not to be depended upon afterwards. It is a great pleasure when a hound challenges to be certain he is right: it is a cruel disappointment to hear a rate immediately succeed it, and the smacking of whips, instead of halloos of encouragement. A few riotous and determined hounds do a deal of mischief in a pack. Never, when you can avoid it, put them amongst the rest; let them be taken out by themselves and well chastised, and if you find them incorrigible hang them. The common saying,
evil

evil communications corrupt good manners, holds good with regard to hounds; they are easily corrupted. The separating of the riotous ones from those which are steady answers many good purposes: it not only prevents the latter from getting the blood which they should not, but it also prevents them from being over-awed by the smacking of whips, which is too apt to obstruct drawing and going deep into cover. A couple of hounds, which I received from a neighbour last year, were hurtful to my pack. They had run with a pack of harriers, and, as I soon found, were never afterwards to be broken from hare. It was the beginning of the season, covers were thick, hares in plenty, and we seldom killed less than five or six in a morning. The pack at last got so much blood, that they would hunt them as if they were designed to hunt nothing else. I parted with that couple of hounds, and the others, by proper management, are become as steady as they were before. You will remind me, perhaps, that they were draft-hounds. It is true, they were so; but they were three or four years hunters, an age when they might be supposed to have known better. I advise you, unless a known good pack of hounds are to be disposed of, not to accept old hounds. I mention this to encourage the breeding of hounds, and as the likeliest means of getting a *handsome, good, and steady pack*: though I give you this advice, it is true, I have accepted

draft-hounds myself, and they have been very good; but they were the gift of the friend mentioned by me in a former letter, to whom I have already acknowledged many obligations; and, unless you meet with such a one, old hounds will not prove worthy your acceptance:* besides, they may bring vices enough along with them to spoil your whole pack. If old hounds should be unsteady, it may not be in your power to make them otherwise; and I can assure you from experience, that an unsteady old hound will give you more trouble than all your young ones; the latter will at least stop, but an obstinate old hound will frequently run mute, if he find that he can run no other way; besides, old hounds that are unacquainted with your people will not readily hunt for them as they ought; and such as were steady in their own pack may become unsteady in your's. I once saw an extraordinary instance of this when I kept harriers: hunting one day on the downs, a well-known fox-hound of a neighbouring gentleman came and joined us, and as he both ran faster than we did, and skirted more, he broke every fault, and killed many hares. I saw this hound often in his own pack afterwards, where he was perfectly steady; and, though he constantly hunted in covers where hares were in

* The Hon. Mr. Booth Grey, brother to the Earl of Stamford. The hounds here alluded to were from Lord Stamford's kennel.

great plenty, I never remember to have seen him run one step after them.

A change of country also will sometimes occasion a difference in the steadiness of hounds. My hounds hunt frequently in Cranborn Chace, and are steady from deer, yet I once knew them run an outlying deer, which they unexpectedly found in a distant country.

I am sorry to hear so bad an accident has happened to your pack as that of killing sheep; but, I apprehend, from your account of it, that it proceeded from idleness rather than vice. The manner in which the sheep were killed may give you some insight into it; old practitioners generally seizing by the neck, and seldom, if ever, behind. This, like other vices, sometimes runs in the blood; in an old hound it is, I believe, incorrigible; the best way, therefore, will be to hang all those which, after two or three whippings, cannot be cured of it. In some countries hounds are more inclined to kill sheep than they are in others. Hounds may be steady in countries where the covers are fenced, and sheep are only to be seen in flocks, either in large fields, or on open downs; and the same hounds may be unsteady in forests and heathy countries where the sheep are not less wild than the deer. However hounds, should they stir but a step after

3 them,

them, should undergo the severest discipline; if young hounds do it from idleness, *that*, and plenty of work, may reclaim them; for old hounds, guilty of this vice, I know, as I said before, of but one sure remedy—*the halter*.

Though I so strongly recommend to you to make your hounds steady, from having seen unsteady packs, yet I must also add, that I have frequently seen the men even more unsteady than the hounds. It is shocking to hear hounds halloed one minute and rated the next: nothing offends a good sportsman so much, or is in itself so hurtful. I will give you an instance of the danger of it;—my beagles were remarkably steady; they hunted hare in Cranborn Chace, where deer are in great plenty, and would draw for hours without taking the least notice of them. When tired of hare-hunting, I was inclined to try if I could find any diversion in hunting of fallow deer. I had been told, that it would be impossible to do it with those hounds that had been made steady from them; and, to put it to the trial, I took them into a cover of my own, which has many ridings cut in it, and where are many deer. The first deer we saw we halloed, and by great encouragement, and constant halloeing, there were but few of these steady hounds but would run the scent. They hunted deer constantly from that day, and never lost one afterwards.

wards. Dogs are sensible animals; they soon find out what is required of them, when we do not confuse them by our own heedlessness: when we encourage them to hunt a scent which they have been rated from, and, perhaps, severely chastised for hunting, they must needs think us cruel, capricious, and inconsistent.*

If you know any pack that is very unsteady, depend upon it, either no care has been taken in entering the young hounds to make them steady; or else the men, afterwards, by hallooing them on improperly, and to a wrong scent, have forced them to become so.

The first day of the season I advise you to take out your pack where you have least riot, and where you are most sure to find; for, notwithstanding their steadiness at the end of the last season, long rest may have made them otherwise.

* Though all hounds ought to be made obedient, none require it so much as fox-hounds, for without it they will be totally uncontrollable; yet, not all the chastisement that cruelty can inflict will render them obedient, unless they be made to understand what is required of them; when that is effected, many hounds will not need chastisement, if you do not suffer them to be corrupted by bad example. Few packs are more obedient than my own, yet none, I believe, are chastised less; for, as those hounds that are guilty of an offence, *are never pardoned*, so those that are innocent, being by this means less liable to be corrupted, *are never punished*.

If you have any hounds more vicious than the rest, they should be left at home a day or two, till the others are well in blood: your people, without doubt, will be particularly cautious at the beginning of the season what hounds they halloo to: should they be encouraged on a wrong scent it will be a great hurt to them.

The first day that you hunt in the forest, be equally cautious what hounds you take out. All should be steady from deer; you afterwards may put others to them, a few at a time. I have seen a pack draw steadily enough; and yet, when running hard, fall on a weak deer, and rest as contented as if they had killed their fox. These hounds were not chastised, though caught in the fact, but were suffered to draw on for a fresh fox; I had rather they had undergone severe discipline. The finding of another fox with them afterwards might then have been of service; otherwise, in my opinion, it could only serve to encourage them in the vice, and make them worse and worse.

I must mention an instance of extraordinary sagacity in a fox-beagle, which once belonged to the Duke of Cumberland. I entered him at hare, to which he was immediately so steady, that he would run nothing else. When a fox was found by the beagles, which sometimes happened, he
would

would instantly come to the heels of the huntsman's horse: some years afterwards I hunted fox *only*, and though I parted with most of the others, I kept *him*: he went out constantly with the pack, and as hares were scarce in the country I then hunted, he did no hurt; the moment a fox was found, he came to the horse's heels. This continued some time, till catching view of a fox that was sinking, he ran in with the rest, and was well blooded. He, from that time to the day of his death, was not only as steady a hound to *fox* as ever I knew, but became also our very best finder. I bred some buck-hounds from him, and they are remarkable for never changing from a hunted deer.

Your huntsman's weekly return is a very curious one; he is particularly happy in the spelling. The following letter, which is in the same style, may make you laugh, and is, perhaps, no unsuitable return for your's.

SIR

HONOURED *

—	—	—	—	—	—	—
—	—	—	—	—	—	—
—	—	—	—	—	—	—

I have been out with the hounds this day to ayer
 the frost is very bad the hounds are all pure well
 at prefont and horfes shephard has had a misfortin
 with his marc she hung harself with the holtar
 and throd har self and broak har neck and frac
 tard skul so we was forsd to nock har In the head
 from your ever dutiful Humbel Sarvant.

Wednesday evening.

* The lines omitted were not upon the subject of hunting.

LET-

LETTER XIX.

FINDING, by your last letter, that an early hour does not suit you, I will mention some particulars which may be of use to you when you hunt late: an early hour is only necessary where covers are large, and foxes scarce; where they are in plenty, you may hunt at any hour you please. When foxes are weak, by hunting late you have better chaces; when they are strong, give me leave to tell you, you must hunt early, or you will not always kill them. I think, however, when you go out late, you should go immediately to the place where you are most likely to find; which, generally speaking, is the cover that hounds have been least in. If the cover be large, you should draw only such parts of it as a fox is likely to kennel in; it is useless to draw any other at a late hour. Besides, though it be always right to find as soon as you can, yet it can never be so necessary as when the day is far advanced: if you do not find soon, a long and tiresome day is generally the consequence. Where the cover is thick, you should draw it as exactly as if you were trying for a hare: particularly if it be furzy: for, when there is no drag, a fox, at a late hour,

will lie till the hounds come close upon him.— Having drawn one cover, let your huntsman stay for his hounds, and take them along with him to another: I have known hounds find a fox after the huntsman had left the cover. The whippers-in are not to be sparing of their whips, or voices on this occasion, and are to come through the middle of the cover, to be certain that they leave no hounds behind.

A huntsman will complain of hounds for staying behind in cover.—It is a great fault, and makes the hound addicted to it of but little value; yet this fault frequently is occasioned by the huntsman's own mismanagement. Having drawn one cover, he hurries away to another, and leaves the whipper-in to bring on the hounds after him; but the whipper-in is seldom less desirous of getting forward than the huntsman; and, unless they come off easily, it is not often that he will give himself much concern about them. Hounds also that are left too long at their walks, will acquire this trick from hunting by themselves, and are not easily broken of it.—Having said all that I can at present recollect of the duty of a whipper-in, I shall now proceed to give you a further account of *that* of a huntsman. What has already been said on the subject of *drawing* and *casting*, related to the fox-chace described in a former letter.— Much, without doubt, is still left to say; and I

will endeavour, as well as I am able, to supply the deficiency, by considering, first, in what manner he should draw; and afterwards, how he should cast his hounds.

The fixing a day or two beforehand upon the cover in which you intend to hunt, is a great hindrance to sport in fox-hunting. You that have the whole country to yourself, and can hunt on either side of your house, as you please, should never, (when you can help it) determine on your place of hunting, till you see what the weather is likely to be.* The most probable means to have good chaces, is to choose your country according to the wind.

It will also require some consideration to place hounds to the greatest advantage where foxes either are in great plenty, or very scarce.

Hounds that lie idle, are always out of wind, and are easily fatigued. The first day you go out after a long frost, you cannot expect much sport; take therefore, considerably more than the usual number of hounds, and throw them into the largest cover that you have; if any foxes be

* When the scent lies badly, small covers, or those in which a fox cannot move unseen, are most favourable to hounds. In such covers, good sportsmen will kill foxes in almost any weather.

in the country, it is *there* you will find them. After once or twice going out in this manner, you should reduce your number.*

Before a huntsman goes into the kennel to draft his hounds, let him determine within himself the number of hounds it will be right to take out; as likewise the number of young hounds that he can venture in the country where he is going to hunt. Different countries may require different hounds: some may require more hounds than others: it is not an easy matter to draft hounds properly; nor can any expedition be made in it, without some method.†

I fel-

* During a frost, hounds may be exercised on downs, or the turnpike roads; nor will it do any material injury to their feet. Prevented from hunting, they should be fed sparingly; and such as can do without flesh, should have none given them. A course of vegetables, sulphur, and thin meat is the likeliest means to keep them healthy.

† No hound ought to be left at home, unless there be a reason for it; it is therefore that I say great nicety is required to draft hounds *properly*. Many huntsmen, I believe, think it of no great consequence which they take out, and which they leave, provided they have the number requisite. A perfect knowledge in feeding and drafting hounds, are the two most essential parts of fox-hunting: good hounds will require but little assistance afterwards. By *feeding*, I mean the bringing the hound into the field, in his highest vigour. By *drafting*, I particularly mean the taking out no unsteady hound, nor any that
are

I feldom suffer many unsteady hounds to be taken out together; and when I do, I take care that none shall go out with them, but such as they cannot spoil.

When the place of meeting, and time are fixed, every huntsman ought to be as exact to them as it is possible. On no account is he to be *before* the time; yet, on some occasions, it might be better, perhaps, for the diversion, were he permitted to be *after it*.* The course your huntsman intends to take in drawing, ought also to be well understood before he leaves the kennel.

If your huntsman, without inconveniency, can begin drawing at the farthest cover down the wind, and so draw from cover to cover up the

are not likely to be of service to the pack:—when you intend to hunt two days following, it is then that the greatest nicety will be requisite to make the most of a small pack. Placing hounds to the greatest advantage, as mentioned in page 228, may also be considered as a necessary part of fox-hunting

Hounds that are intended to hunt the next day, and are drafted off into the hunting kennel as soon as they are fed, should be let out again into the outer court in the evening: my hounds have generally some thin meat given them at this time, while the feeder cleans out their kennel. (vide note page 44.) I have already said that cleanliness is not less essential than food.

* When there is a white frost for instance, at the going off of which, the scent never lies.

wind till you find, let him do it: it will have many advantages attending it: he will draw the same covers in half the time; your people cannot fail of being in their proper places; you will have less difficulty in getting your hounds off; and as the fox will most probably run the covers that have been already drawn, you are least likely to change.

If you have a string of small covers, and plenty of foxes in them, some caution may be necessary to prevent your hounds from disturbing them all in one day. Never hunt your small covers till you have well rattled the large ones first; for until the foxes be thinned and dispersed, where they were in plenty, it must be bad policy to drive others there to increase the number.—If you would thin your foxes, you must throw off at the same cover as long as you can find a fox. If you come off with the fox that breaks, you do not disturb the cover, and may expect to find there again the next day; but where they are scarce, you should never draw the same cover two days following.

Judicious huntsmen will observe where foxes like best to lie. In chaces and forests, where you have a great tract of cover to draw, such observation is necessary, or you will lose much time in finding. Generally speaking, I think they are fondest
of

of such as lie high, and are dry and thick at bottom; such also as lie out of the wind; and such as are on the sunny side of hills.* The same cover where you find one fox, when it has remained quiet any time, will probably produce another.

It is to little purpose to draw hazle coppices at the time when nuts are gathered; furze covers, or two or three years coppices, are then the only quiet places that a fox can kennel in: *they* also are disturbed when pheasant-shooting begins, and older covers are more likely. The season when foxes are most wild and strong is about Christmas; a huntsman, then, must lose no time in drawing; he must draw up the wind; unless the cover be very large, in which case it may be better perhaps to cross it; giving the hounds a side wind, lest he should be obliged to turn down the wind at last:—in either case let him draw as quietly as he can.

Young coppices, at this time of the year, are quite bare; the most likely places are four or five years coppices, and such as are furzy at bottom.

* This must of course vary in different countries, a huntsman who has been used to a country knows best where to find his game.

It is easy to perceive, by the account you give of your hounds, that they do not draw well; your huntsman, therefore, must be particularly attentive to them after a wet night. The best drawing hounds are shy of searching a cover when it is wet; your's, if care be not taken, will not go into it at all: your huntsman should ride into the likeliest part of the cover, and as it is probable there will be no drag, the closer he draws the better: he must not draw too much an end, but should cross the cover backwards and forwards, taking care at the same time to give his hounds as much the wind as possible.*

It is not often that you will see a pack perfectly steady, where there is much riot, and yet draw well: some hounds will not exert themselves, till others challenge, and are encouraged.†

I fear the many harriers that you have in your neighbourhood will be hurtful to your sport. by constantly disturbing the covers, they will make

* Hounds that are hunted constantly at an early hour, seldom I think draw well; they depend too much upon a drag, and it is not in the strongest part of the cover that they are accustomed to try for it.

† This relates to making hounds steady only, which always causes confusion, and interrupts drawing. When once a pack are become steady, they will be more likely to draw well, than if they were not.

the foxes shy, and when the covers become thin, there will be but little chance of finding foxes in them: furze covers are then the most likely places. Though I like not to see a huntsman to a pack of fox-hounds ever off his horse, yet, at a late hour, he should draw a furze cover as slowly as he were himself on foot. I am well convinced that huntsmen, by drawing in too great a hurry, leave foxes sometimes behind them. I once saw a remarkable instance of it with my own hounds: we had drawn (as we thought) a cover, which in the whole, consisted of about ten acres; yet, whilst the huntsman was blowing his horn, to get his hounds off, one young fox was hallooed, and another was seen immediately after: it was a cover on the side of a hill, and the foxes had kennelled close together at an extremity of it, where no hound had been. Some huntsmen draw too quick, some too slow;—the time of day, the behaviour of his hounds, and the covers they are drawing, will direct an observing huntsman in the pace which he ought to go. When you try a furze brake, let me give you one caution;—never halloo a fox till you see that he is quite clear of it. When a fox is found in such places, hounds are sure to go off well with him; and it must be owing either to bad scent, bad hounds, bad management, or bad luck, if they fail to kill him afterwards.

It is usual in most packs to rate, as soon as a young hound challenges. Though young hounds are often wrong, yet since it is not impossible that they may be sometimes right, is it not as well to have a little patience, in order to see whether any of the old ones will join, before any thing is said to them? *Have a care!* is fully sufficient, till you are more certain that the hound is on a wrong scent. I mention this as a hint only—I am myself no enemy to a *rate*—I cannot think that a fox was ever lost, or pack spoiled by it: it is *improper encouragement* that I am afraid of most.

When a fox flinks from his kennel, gets a great way before the hounds, and you are obliged to hunt after him with a bad scent; if it be a country where foxes are in plenty, and you know where to find another, you had better do it.*

While hounds are drawing for a fox, let your people place themselves in such a manner that he cannot go off unseen. I have known them lie in sheep's scrapes on the side of hills, and in small bushes, where huntmen never think of looking for them; yet, when they hear a hound, they generally shift their quarters, and make for closer

* Yet if this were practised often, it might make the hounds indifferent when upon a cold scent. Hounds should be made to believe they are to kill that game which they are first encouraged to pursue.

covers.—Gentlemen should take this necessary part of fox-hunting on themselves, for the whipper-in has other business to attend on.*

I approve not of long drags in large covers; they give too great an advantage to the fox, they give him a hint to make the best of his way, and he frequently will set off a long while before you. This may be prevented by throwing your hounds into that part of the cover, in which he is most likely to kennel: for want of this precaution, a fox sometimes gets so far the start of hounds, that they are not able to do any thing with him afterwards. Also, when hounds first touch on a drag, some huntsmen are so careless, that whilst they are going on with it the wrong way themselves, a single hound the fox, and is not caught any more by the pack, till he has lost him again.

Foxes are said to go down the wind to their kennel; but, I believe, they do not always observe that rule.

Huntsmen, whilst their hounds, are drawing, or are at a fault, frequently make so much noise themselves, that they can hear nothing else: they

* Upon these occasions, when you see two gentlemen together, you may reasonably conclude that one of them, at least, knows nothing of the matter.

should always have an ear to a halloo. I once saw an extraordinary instance of the want of it in my own huntsman, who was making so much noise with his hounds which were then at fault, that a man halloocd a long while before he heard him; and when he did hear him, so little did he know whence the halloo came, that he rode two miles the wrong way, and lost the fox.

When hounds approach a cover which it is intended they should draw, and dash away towards it, whippers-in ride after them to stop them. It is too late, and they had better let them alone; it checks them in their drawing, and is of no kind of use; it will be soon enough to begin to rate when they have found, and hunt improper game: when a huntsman has his hounds under good command, and is attentive to them, they will not break off till he choose that they should. When he goes by the side of a cover which he does not intend to draw, his whippers-in must be in their proper places; for if he should ride up to a cover with them unawed, uncontroled; a cover where they have been used to find, they must be slack indeed, if they do not dash into it. It is for that reason better, not to come into a cover always the same way; hounds, by not knowing what is going forward will be less likely to break off, and will draw more quietly. I have seen hounds so flashy, that they would break away from the
huntsman

hunter as soon as they saw a cover; and I have seen the same hounds stop when they got to the cover side, and not go into it. It is want of proper discipline which occasions faults like these. Hounds that are under such command as never to leave their hunter till he encourage them to do it, will be then so confident, that they will not return to him again.

Were fox-hounds to stop, like stop-hounds, at the smack of a whip, they would not do their business the worse for it, and it would give you many advantages very essential to your sport;—such, as when they have to wait under a cover side; when they run riot; when they change scents; when a single hound is on before; and when a fox is headed back into a cover. Hounds that are not under good command subject you to many inconveniencies; and you may, at times, be obliged to go out of your way, or be made to draw a cover against your will. A famous pack of hounds in my neighbourhood, I mean the late Lord C——n's, had no fault but what had its rise from bad management; nor is it possible to do any thing with a pack of fox-hounds unless they be obedient: they should both love and fear the hunter; they should fear him much, yet they should love him more. Without doubt hounds would do more for the hunter if they loved him better. Dogs that are constantly with their
masters

masters acquire a wonderful deal of penetration, and much may be done through the medium of their affections. I attribute the extraordinary sagacity of the buck-hound to the manner in which he is treated; he is the constant companion of his instructor and benefactor; the man whom he was first taught to fear, and has since learned to love: ought we to wonder that he should be obedient to him? Yet, who can view without surprise the hounds and the deer amusing themselves familiarly together upon the same lawn; living, as it were, in the most friendly intercourse; and know that a word from the keeper will dissolve the amity. The obedient dog, gentle when unprovoked, flies to the well-known summons; how changed from what he was! roused from his peaceful state, and cheered by his master's voice, he is now cheered on with a relentless fury that only death can satisfy—the death of the *very deer* he is encouraged to pursue; and which the various scents that cross him in his way cannot tempt him to forsake. The business of the day over, see him follow, careless and contented, his master's steps to repose upon the same lawn, where the frightened deer again return, and are again indebted to *his* courtesy for their wonted pasture. Wonderful proofs of obedience, sagacity, and penetration! The many learned dogs and learned horses that so frequently appear, and astonish the vulgar, sufficiently evince what education

Black Sc.

Earth Stopping.

Published Novr 1st 1704, by J. Widdie, Warwick Square, St Pauls

cation is capable of; and it is to education I must chiefly attribute the superior excellence of the buck-hound, since I have seen high-bred fox-hounds do the same under the same good masters. But to return to my subject.

Young foxes, that have been much disturbed, will lie at ground. I once found seven or eight in a cover, where the next day I could not find one; nor were they to be found elsewhere: the earths, at such time, should be stopped three or four hours before day, or you will find no foxes.

The first day you hunt a cover that is full of foxes, and you want blood, let them not be checked back into the cover, which is the usual practice at such times, but let some of them get off: if you do not, what with continual changing, and sometimes running the heel, it is probable that you will not kill any. Another precaution, I think, may be also necessary; that is, to stop such earths only as you cannot dig. If some foxes should go to ground it will be as well; and if you should be in want of blood at last, you will then know where to get it.

It is usual, when people are not certain of the steadiness of their hounds from deer, to find a fox in an adjacent cover, that they may be on their right scent when they come where deer are.

R

I have

I have my doubts of the propriety of this proceeding: if hounds have not been well awed from deer, it is not fit that they at any rate should come among them; but if hounds be tolerably steady, I had rather find a fox with them amongst deer, than bring them afterwards into covers where deer are. By drawing amongst them, they in some degree will be awed from the scent, and possibly may stick to the fox when he is found; but should unsteady hounds, when high on their mettle, run into a cover where deer are in plenty, there is no doubt, that the first check they come to they will all fall off. I always have found hounds most inclined to riot when most upon their mettle; such as are given to sheep will then kill sheep; and such as are not quite steady from deer will then be most likely to break off after them. When hounds are encouraged on a scent, if they lose that scent, it is then an unsteady hound is ready for any kind of mischief.

I have already said, that a huntsman ought never to flog a hound. When a riotous hound, conscious of his offence, may escape from the whipper-in, and fly to the huntsman, you will see him put his whole pack into confusion by endeavouring to chastise him himself. This is the height of absurdity! Instead of flogging the hound he ought to encourage him, who should always have some place to fly to for protection. If the
offence

offence be a bad one, let him get off his horse and couple up the dog, leaving him to be chastised by the whipper-in, after he himself is gone on with the pack: the punishment over, let him again encourage the hound to come to him. Hounds that are riotous in cover, and will not come off readily to the huntsman's halloo, should be flogged in the cover rather than out of it;—treated in this manner, you will not find any difficulty in getting your hounds off; otherwise, they will soon find that the cover will save them; from whence they will have more sense, when they have committed an offence, than to come to receive punishment. A favourite hound, that has acquired a habit of staying back in large covers, had better not be taken into them.

I have been more particular than I otherwise should have been, upon a supposition that your hounds draw ill; however, you need not observe all the cautions I have given, unless your hounds require them.

Some art may be necessary to make the most of the country that you hunt. I would advise you not to draw the covers near your house, while you can find elsewhere; it will make them certain places to find in when you go out late, or may otherwise be in want of them. For the same reason, I would advise you not to hunt those covers late in the season;

son; they should not be much disturbed after Christmas: foxes will then resort to them, will breed there, and you can preserve them with little trouble. This relates to the good management of a pack of hounds, which is a business distinct from hunting them.

Though a huntsman ought to be as silent as possible at going into a cover, he cannot be too noisy at coming out of it again; and if at any time he should turn back suddenly, let him give as much notice of it as he can to his hounds, or he will leave many behind him; and should he turn down the wind, he may see no more of them.

I should be sorry that the silence of my huntsman should proceed from either of the following causes.—A huntsman that I once knew, (who, by the bye, I believe, is at this time a drummer in a marching regiment) went out one morning so very drunk, that he got off his horse in the midst of a thick cover, laid himself down, and went to sleep:—he was lost, nobody knew what was become of him, and he was at last found in the situation I have just described. He had, however, great good luck on his side, for at the very instant he was found a fox was hallooed; upon which he mounted his horse, rode desperately, killed his fox handsomely, and was forgiven.

I remember another huntsman filent from a different cause; this was a fulky one. Things did not go on to please him; he therefore alighted from his horse in the middle of a wood, and, as quietly as he could, collected his hounds about him; he then took an opportunity, when the coast was clear, to set off filently, and by himself, for another cover: however his master, who knew his tricks, sent others after him to bring him back; they found him running a fox most merrily, and, to his great astonishment, they stopped the hounds, and made him go back along with them. This fellow had often been severely beaten, but was stubborn and fulky to the last.

To give you an idea before I quit this subject, how little some people know of fox-hunting, I must tell you, that not long ago a gentleman asked me if I did not send people out *the day before* to find where the foxes lay.

What relates to the casting of hounds shall be the subject of my next letter.

LETTER XX.

IN my seventeenth letter I gave the opinion of my friend ****—“ *that a pack of fox-hounds, if left entirely to themselves, would never lose a fox.*” I am always sorry when I differ from that gentleman in any thing; yet I am so far from thinking they never would lose a fox, that I doubt much if they would ever kill one. There are times when hounds should be helped, and at all times they must be kept forward; hounds will naturally tie on a cold scent when stopped by sheep or other impediments; and when they are no longer able to get forward, will oftentimes hunt the old scent back again, if they find that they can hunt no other. It is the judicious encouraging of hounds to hunt when they cannot run, and the preventing them from losing time by hunting too much when they might run, that distinguishes a good sportsman from a bad one.* Hounds that have been well taught will cast forward to a hedge of their own accord; but you may assure yourself, this excellence is never acquired by such as are

* In hunting a pack of hounds a proper medium should be observed; for though too much help will make them slack, too little will make them tie on the scent and hunt back the heel.

left entirely to themselves. To suffer a pack of fox-hounds to hunt through a flock of sheep, when it is easy to make a regular cast round them, is, in my judgment, very unnecessary—it is wilfully losing time to no purpose. I have indeed been told, that hounds at no time should be taken off their noses: I shall only say, in answer to this, that a fox-hound who will not bear lifting is not worth the keeping; and I will venture to say, it should be made part of his education.

Though I like to see fox-hounds cast wide and forward, and dislike to see them pick a cold scent through flocks of sheep to no purpose, yet I must beg leave to observe, that I dislike still more to see that unaccountable hurry which huntsmen will sometimes put themselves into the moment their hounds are at fault: time ought always to be allowed them to make their own cast; and if a huntsman be judicious, he will take that opportunity to consider what part he himself has next to act; but, instead of this, I have seen hounds hurried away the very instant they came to a fault, a wide cast made, and the hounds at last brought back again to the very place from whence they were so abruptly taken; and where, if the huntsman could have had a minute's patience, they would have hit off the scent themselves. It is always great impertinence in a huntsman to pretend to make *his* cast before the hounds

have made *their's*. Prudence should direct him to encourage, and I may say, humour his hounds in the cast they seem inclined to make; and either to stand still, or trot round with them, as circumstances may require.

I have seen huntsmen make their cast on bad ground when they might as easily have made it on good: I have seen them suffer their hounds to try in the midst of a flock of sheep, when there was a hedge near, where they might have been sure to take the scent; and I have seen a cast made with every hound at their horse's heels. When a hound tries for the scent his nose is to the ground; when a huntsman makes a cast his eye should be on his hounds; and when he sees them spread wide, and try as they ought, his cast may then be quick.

When hounds are at fault, and the huntsman hallooos them off the line of the scent, the whippers-in smacking their whips and rating them after him, if he should trot away with them, may they not think that the business of the day is over?—Hounds never, in my opinion, (unless in particular cases, or when you go to a halloo) should be taken entirely off their noses; but when lifted, should be constantly made to try as they go. Some huntsmen have a dull, stupid way of speaking to their hounds; at these times little should be said,
and

and that should have both meaning and expression in it.

When your huntsman makes a cast, I hope he makes it perfect one way before he tries another, as much time is lost in going backwards and forwards. You will see huntsmen, when a forward cast does not succeed, come slowly back again—they should return as fast as they can.

When hounds are in fault, and it is probable that the fox has headed back, your cast forward should be short and quick, for the scent is then likely to be behind you; too obstinate a perseverance forward has been the loss of many foxes. In heathy countries, if there be many roads, foxes will always run them in dry weather; when hounds, therefore, over-run the scent, if your huntsman return to the first cross road, he, probably, will hit off the scent again.

In large covers where there are several roads; in bad scenting days when these roads are dry; or, after a thaw, when they carry; it is necessary that your huntsman should be near to his hounds, to help them and hold them forward. Foxes will run the roads at these times, and hounds cannot always own the scent. When they are at fault on a dry road, let not your huntsman turn back too soon, let him not stop till he can be certain that
the

the fox is not gone on; the hounds should try on both sides the road at once: if he perceive that they try on one side only, let him try the other, on his return.

When hounds are running in cover, if a huntsman should see a fox come into a road, and cannot see which way he turns afterwards, let him stand still, and say nothing. If he ride on, he must ride over the scent; and if he encourage the hounds, they, most probably, would run beyond it.

Wide ridings, cut through large woods, render them less exceptionable to sportsmen than they otherwise might be; yet I do not think that they are of service to hounds:—they are taught to shuffle; and, the fox being frequently headed back, they are put to many faults:—the roads are foiled by the horses, and the hounds often interrupted by the horsemen:—such ridings only are advantageous, as enable the servants belonging to the hounds to get to them.

If a fox should run up the wind, when first found, and afterwards turn, he will seldom, if ever turn again. This observation may not only be of use to your huntsman in his cast, but may be of use to yourself, if you should lose the hounds.

When

When you are pursuing a fox over a country, the scent being bad, and the fox a long way before, without ever having been pressed, if his point should be for strong earths that are open, or for large covers, where game is in plenty, it may be acting wisely to take off the hounds at the first fault; for the fox will go many miles to your one, and probably will run you out of all scent; and if he should not, you will be likely to change at the first cover you come into:—when a fox has been hard pressed, you have already my opinion, that he never should be given up.

When you would recover a hunted fox, and have no longer scent to hunt him by, a long cast to the first cover which he seems to point for, is the only resource that you have left: get thither as fast as you can, and then let your hounds try as slowly and as quietly as possible: if hunting after him be hopeless, and a long cast do not succeed, you had better give him up—I need not remind you, when the scent lies badly, and you find it impossible for hounds to run, that you had better return home; since the next day may be more favourable. It surely is a great fault in a huntsman to persevere in bad weather, when hounds cannot run; and when there is not a probability of killing a fox.* Some there are, who,

* Though I would not go out on a very windy day, yet a bad scenting day is sometimes of service to a pack of fox-hounds—they acquire patience from it, and method of hunting.

after they have loft one fox for want of ſcent to hunt him by, will find another; this makes their hounds ſlack, and ſometimes vicious: it alſo diſturbſ the covers to no purpoſe. Some ſportſmen are more lucky in their days than others. If you hunt every other day, it is poſſible they may be all bad, and the intermediate days all good; an indifferent pack, therefore, by hunting on good days, may kill foxes without any merit; and a good pack, notwithstanding all their exertions, may loſe foxes which they deſerve to kill. Had I a ſufficiency of hounds I would hunt on every good day, and never on a bad one.*

A perfect knowledge of his country certainly is of great help to a huntsman: if your's, as yet, ſhould have it not, great allowance ought to be made. The trotting away with hounds to make a long and knowing caſt, is a privilege which a new huntsman cannot pretend to: an experienced one may ſafely ſay, a fox has made for ſuch a cover, when he has known, perhaps, that nine

* On windy days, or ſuch as are not likely to afford any ſcent for hounds, it is better, I think, to ſend them to be exerciſed on the turnpike road; it will do them leſs harm than hunting with them might do, and more good than if they were to remain confined in their kennel; for though nothing makes hounds ſo handy, as taking them out often; nothing inclines them ſo much to riot, as taking them out *to hunt* when there is little or no ſcent; and particularly on windy days, when they cannot hear one another.

out

out of ten, with the wind in the same quarter, have constantly gone thither.

In a country where there are large earths, a fox that knows the country, and tries any of them, seldom fails to try the rest. A huntsman may take advantage of this; they are certain casts, and may help him to get nearer to his fox.

Great caution is necessary when a fox runs into a village: if he be halloed there, get forward as fast as you can. Foxes, when tired, will lie down any where, and are often lost by it.—A wide cast is not the best to recover a tired fox with tired hounds;—they should hunt him out, inch by inch, though they are ever so long about it; for the reason I have just given;—*that he will lie down any where.*

In chaces and forests, where high fences are made to preserve the coppices, I like to see a huntsman put only a few hounds over, enough to carry on the scent, and get forward with the rest, it is a proof that he knows his business.

A huntsman must take care, where foxes are in plenty, lest he should run the heel; for it frequently happens, that hounds can run the wrong way of the scent better than they can the right, when one is up the wind, and the other down.

Fox-

Fox-hunters, I think, are never guilty of the fault of trying up the wind, before they have tried down; I have known them lose foxes rather than condescend to try up the wind at all.

When a huntsman hears a halloo, and has five or six couple of hounds along with him, the pack not running, let him get forward with those which he has; when they are on the scent, the others will soon join them.

Let him lift his tail hounds, and get them forward *after the rest*; it can do no hurt; but let him be cautious in lifting any hounds to get them forward *before the rest*; it always is dangerous, and foxes are sometimes lost by it.

When a fox runs his foil in cover, if you suffer all your hounds to hunt on the line of him, they will foil the ground, and tire themselves to little purpose. I have before told you, that your huntsman, at such a time, may stop the tail hounds, and throw them in at head. I am almost inclined to say, it is the only time it should be done.—Whilst hounds run strait, it cannot be of any use, for they will get on faster with the scent, than they would without it.

When hounds are hunting a cold scent, and point towards a cover, let a whipper-in get forward
ward

ward to the opposite side of it: should the fox break before the hounds reach the cover, stop them, and get them nearer to him.

When a fox persists in running in a strong cover, lies down often behind the hounds, and they are slack in hunting him, let the huntsman get into the cover to them: it may make the fox break, it may keep him off his foil, or may prevent the hounds from giving him up.

It is not often that slow huntsmen kill many foxes; they are a check upon their hounds, which seldom kill a fox but with a high scent, when it is out of their power to prevent it. What avails it to be told which way the fox is gone, when he is so far before, that you cannot hunt him? A Newmarket boy, with a good understanding and a good voice, might be preferable, perhaps, to an indifferent and slack huntsman; he would press on his hounds, while the scent was good, and the foxes he killed he would kill handsomely.— A perfect knowledge of the intricacies of hunting is chiefly of use to slow huntsmen and bad hounds; since they more often stand in need of it. Activity is the first requisite in a huntsman to a pack of fox-hounds; a want of it no judgment can make amends for; while the most difficult of all his undertakings is the distinguishing betwixt different scents, and knowing, with any certainty,

certainly, the scent of his hunted fox. Much speculation is here required ;—the length of time hounds remain at fault ;—difference of ground ;—change of weather ;—all these contribute to increase the difficulty ; and require a nicety of judgment, and a precision, much above the comprehension of most huntsmen.

When hounds are at fault, and cannot make it out of themselves, let the first cast be quick ; the scent is then good, nor are the hounds likely to go over it ; as the scent gets worse, the cast should be slower, and be more cautiously made. This is an essential part of hunting, and which, I am sorry to say, few huntsmen attend to. I wish they would remember the following rules, viz. that with a good scent, their cast should be *quick* ; with a bad scent, *slow* ;—and that, when their hounds are picking along a cold scent,—*they are not to cast them at all.*

When hounds are at fault, and staring about, trusting entirely to their eyes, and to their ears ; the making a cast with them, I apprehend, would be to little purpose. The likeliest place for them to find the scent, is where they left it ; and when the fault is evidently in the dog, a forward cast is least likely to recover the scent.*

* Hounds know where they left the scent, and if let alone will try to recover it. Impatience in the huntsman, at such times, seldom fails, in the end, to spoil the hounds.

When hounds are making a regular cast, trying for the scent as they go, suffer not your huntsman to say a word to them; it cannot do any good, and probably may make them go over the scent: nor should you suffer either the voice or the whip of your whipper-in, to be now heard; his usual roughness and severity would ill suit the stillness and gentleness which are required at a time like this.

When hounds come to a check, a huntsman should observe the tail hounds; they are least likely to over-run the scent, and he may see by them how far they brought it: in most packs there are some hounds that will shew the point of the fox, and if attended to, will direct his cast: when such hounds follow slowly and unwillingly, he may be certain the rest of the pack are running without a scent.

When he casts his hounds, let him not cast wide without reason; for of course it will take more time. Huntsmen, in general, keep too forward in their casts; or, as a sailor would say, keep too long *on one tack*. They should endeavour to hit off the scent by crossing the line of it.—*Two parallel lines, you know, can never meet.**

* By attending to this a huntsman cannot fail to make a good cast, for if he observe the point of the fox, he may always cross upon the scent of him.

When he goes tó a halloo, let him be careful lest his hounds run the heel, as much time is lost by it. I once saw this mistake made by a famous huntsman:—after we had left a cover, which we had been drawing, a disturbed fox was seen to go into it; he was halloed, and we returned. The huntsman, who never inquired *where* the fox was seen, or on *which side* the cover he entered, threw his hounds in at random; and, as it happened, on the opposite side: they immediately took the heel of him, broke cover, and hunted the scent back to his very kennel.

Different countries require different casts: such huntsmen as have been used to a woodland, and inclosed country, I have seen lose time in an open country, where wide casts are always necessary.

When you want to cast round a flock of sheep, the whipper-in ought to drive them the other way, lest they should keep running on before you.

A fox seldom goes over or under a *gate* when he can avoid it.

Huntsmen are frequently very conceited, and very obstinate. Oftentimes have I seen them, when their hounds came to a check, turn directly back on seeing hounds at head which they had

no opinion of. They *supposed* the fox was gone another way; in which case Mr. Bayes's remark in the Rehearſal always occurs to me, "that, if he ſhould not, what then becomes of their ſuppoſe?" Better, ſurely, would it be, to make a ſhort caſt forward firſt; they then might be *certain* the hounds were wrong, and of courſe could make their own caſt with greater confidence:—the advantage, next to that of knowing whither the fox *is* gone, is that of knowing, with certainty, whither he *is not*.

Moſt huntſmen like to have all their hounds turned after them, when they make a caſt: I wonder not at them for it, but I am always ſorry when I ſee it done; for, till I find a huntſman that is infallible, I ſhall continue to think the more my hounds ſpread, the better; as long as they are within ſight or hearing, it is ſufficient.—Many a time have I ſeen an obſtinate hound hit off the ſcent, when an obſtinate huntſman, by caſting the wrong way, has done all in his power to prevent it. Two foxes I remember to have ſeen killed, in one day, by ſkirting hounds, whiſt the huntſman was making his caſt the contrary way.

When hounds, running in cover, come into a road, and horſes are on before, let the huntſman hold them quickly on beyond where the horſes

have been, trying the opposite side as he goes along: should the horsemen have been long enough there to have headed back the fox, let them then try back. Condemn me not for suffering hounds *to try back* when the fox *has been headed back*; I recommend it at no other time.

When your hounds divide into many parts, you had better go off with the first fox that breaks. The ground will soon get tainted, nor will hounds like a cover where they are often changing.

If a cover be very large, and you have many scents, be not in a hurry to get your hounds together;—if your pack be numerous, let them run separate, only taking care that none get away entirely from the rest; by this means many foxes will be equally distressed, the hounds will get together at last, and one fox, at the least, you may expect to kill.

The heading a fox back at first, if the cover be not a large one, is oftentimes of service to hounds, as he will not stop, and cannot go off unseen.—When a fox has been hard run, I have known it turn out otherwise; and hounds, that would easily have killed him out of the cover, have left him in it.

If it be not your intention that a fox should break, you should prevent him, I think, as much as you can from coming at all out of the cover; for though you should head him back afterwards, it most probably would put the hounds to a fault: when a pack of fox-hounds once leave a cover after their game, they do not readily return to it again.

When a fox has been often headed back on one side of a cover, and a huntiman knows there is not any body on the other side to halloo him, the first fault his hounds come to, let him cast that way, lest the fox should be gone off; and if he be still in the cover, he may still recover him.

Suffer not your huntiman to take out a lame hound. If any be tender-footed, he will tell you, perhaps, that they will not mind it when they are out;—probably they may not; but how will they be on the next day? A hound, not in condition to run, cannot be of much service to the pack; and the taking him out at that time may occasion him a long confinement afterwards:—put it not to the trial. Should any fall lame while they are out, leave them at the first house that you come to.

I have seen huntsmen hunt their young hounds in couples. 'Let me beg of you not to suffer it. I know you would be sorry to see your hounds hanging across a hedge, grinning at each other, perhaps in the very agonies of death: yet it is an accident that often has happened; and it is an accident so likely to happen, that I am surprised any man of common sense will run the risk of it. If necessary, I had much rather they should be held in couples at the cover side, till the fox be found.

The two principal things which a huntsman has to attend to, are the keeping of his hounds *healthy* and *steady*. The first is attained by cleanliness and proper food; the latter, by putting, as seldom as possible, any unsteady ones amongst them.

At the beginning of the season let him be attentive to get his hounds well in blood. As the season advances, and foxes become stout, attention then should be had to keep them as vigorous as possible.—It is a great fault when hounds are suffered to become too high in flesh at the beginning of the season, or too low afterwards.

When a fox is lost, the huntsman on his return home should examine into his *own conduct*, and endeavour to find in what he might have done better;

ter; he may by this means make the very loss of a fox of use to him.

Old tyeing hounds, and a hare-hunter turned fox-hunter, are both as contrary to the true spirit of fox-hunting, as any thing can possibly be.— One is continually bringing the pack back again; the other as constantly does his best to prevent them from getting forward. The natural prejudices of mankind are such, that a man seldom alters his style of hunting, let him pursue what game he may; besides, it may be constitutional, as he is himself slow or active, dull or lively, patient or impatient; it is for that reason I object to a hare-hunter for a pack of fox-hounds; for the same ideas of hunting will most probably stick by him as long as he lives.

Your huntsman is an old man; should he have been working hard all his life on wrong principles, he may be now incorrigible.

Sometimes you will meet with a good kennel huntsman, sometimes an active and judicious one in the field; some are clever at finding a fox, others are better after he is found; whilst perfection in a huntsman, like perfection in any thing else, is scarcely ever to be met with: there are not only good, bad, and indifferent huntsmen, but there are perhaps a few others, who being as

it were of a different species, should be classed apart;—I mean, such as have *real genius*. It is this peculiar excellence, which I told you in a former letter, I would rather wish my first whipper-in to be possessed of than my huntsman; and one reason among others, is, that he, I think, would have more opportunities of exercising it.

The keeping hounds clean and healthy, and bringing them into the field in their fullest vigour, is the excellence of a good kennel huntsman: * if, besides this, he makes his hounds both love and fear him; if he be active, and presses them on, whilst the scent is good, always aiming to keep as near to the fox as he can; if, when his hounds are at fault, he make his cast with judgment, not casting the wrong way first, and only blundering upon the right at last as many do; if, added

* To make the most of a pack of hounds, and bring them into the field in their fullest vigour, is an excellence that huntmen are very deficient in.—To obtain a knowledge of the different constitutions of so many animals, requires more discernment than most huntmen are endowed with.—To apply that knowledge, by making separate drafts when they feed them, would also take up more time than they choose to bestow; hence it is, that they generally are fed all together:—they may be well fed, but I much doubt if they are ever made the most of—such as require to be fed *a little at a time*, and *often* must, I believe, be contented with *a little only*.—Few huntmen seem fond of their hounds;—one reason of it, perhaps, may be, that they are paid for looking after them.

to this, he be patient and persevering, never giving up a fox, whilst there remains a chance of killing him, he then is a perfect huntsman.

Did I not know your love of this diversion, I should think, by this time, that I must have tired you completely. You are not particular, however, in your partiality to it; for to shew you the effect which fox-hunting has on those who are really fond of it, I must tell you what happened to me not long ago.—My hounds, in running a fox, crossed the great western road, where I met a gentleman travelling on horseback, his servant, with a portmanteau, following him. He no sooner saw the hounds than he rode up to me, with the greatest eagerness, “*Sir,*” said he, “*are you after a fox?*”—When I told him, we were, he immediately stuck spurs to his horse, took a monstrous leap, and never quitted us any more, till the fox was killed.—I suppose, had I said, we were after a *hare*, my gentleman would have pursued his journey.

LETTER XXI.

YOUR huntsman, you say, has hunted a pack of harriers. It might have been better, perhaps, had he never seen one, since fox-hunting and hare-hunting differ almost in every particular; so much, that I think it might not be an improper negative definition of fox-hunting to say it is of *all* hunting, *that* which resembles hare-hunting the least. A good huntsman to a pack of harriers seldom succeeds in fox-hunting; like old hounds they dwell upon the scent, and cannot get forward; nor do they ever make a bold cast, so much are they afraid of leaving the scent behind them. Hence it is that they poke about and try the same place ten times over rather than they will leave it; and when they do, are totally at a loss which way to go, for want of knowing the nature of the animal they are in pursuit of. As hare-hounds should scarcely ever be cast, hallooed, or taken off their noses, hare-hunters are too apt to hunt their fox-hounds in the same manner; but it will not do, nor could it please you if it would. Take away the spirit of fox-hunting, and it is no longer fox-hunting; it is stale small beer compared to brisk champain. You would also find in it more
fatigue

fatigue than pleasure. It is said, *there is a pleasure in being mad which only madmen know*; and it is the enthusiasm, I believe, of fox-hunting which is its best support; strip it of that, and you had better leave it quite alone.

The hounds themselves also differ in their manner of hunting: the beagle, who has always his nose to the ground, will puzzle an hour on one spot sooner than he will leave the scent; while the fox-hound, full of life and spirit, is always dashing and trying forward. A high-bred fox-hound, therefore, shews himself to most advantage when foxes are at their strongest and run an end. A pack of harriers will kill *a cub* better, perhaps, than a pack of fox-hounds; but when foxes are strong, they have not the method of getting on with the scent which fox-hounds have, and generally tire themselves before the fox. To kill foxes when they are strong, hounds must run as well as hunt; besides, catching a fox by hard running is always preferred in the opinion of a fox-hunter. Much depends, in my opinion, on the style in which it is done; and I think, without being sophistical, a distinction might be made betwixt hunting a fox and fox-hunting. Two hackneys become not racers by running round a course, nor does the mere hunting of a fox change the nature of the harrier. I have also seen a hare hunted by high-bred fox-hounds; yet, I confess

to you, it gave me not the least idea of what hare-hunting ought to be. Certain ideas are necessarily annexed to certain words; this is the use of language; and when a fox-hound is mentioned, I should expect not only a particular kind of hound, as to make, size, and strength, by which the fox-hound is easy to be distinguished: but I should also expect by fox-hunting, a lively, animated, and eager pursuit, as the very essence of it.* Eagernefs and impetuosity are such essential parts of this diversion, that I am never more surpris'd than when I see a fox-hunter without them. One *hold hard*, or reproof *unnecessarily* given, would chill me more than a north-east wind; it would damp my spirits and send me home. The enthusiasm of a fox-hunter should not be checked in its career, for it is the very life and soul of fox-hunting. If it be the eagernefs with which you pursue your game that makes the chief pleasure of the chace, fox-hunting surely should afford the greatest degree of it, since you pursue no animal with the same eagernefs that you pursue a fox.

* The six following lines may have a dangerous tendency. Only a good sportsman can know when a reproof is given *unnecessarily*, and only a bad one will be deserving of reproof. This passage, therefore, should be compared with pages 149, 187, 189, 204, where the meaning of the author is very clearly expressed.

Knowing your partiality to hounds that run in a good style, I advise you to observe strictly your own when a fox is sinking in a strong cover; *that* is the time to see the true spirit of a fox-hound. If they spread not the cover, but run tamely on the line of one another, I shall fear it is a sort that will not please you long. A fox-hound that has not spirit and ambition to get forward at a time like this, is at no other likely to do much good.

You talked in your last letter of pretty hounds; certainly I should not pretend to criticise others, who am so incorrect myself; yet, with your leave, I think I can set you right in that particular.—Pretty is an epithet improperly applied to a fox-hound: we call a fox-hound handsome when he is strong, bony, of a proper size, and of exact symmetry; and fitness is made essential to beauty. A beagle may be pretty, but, according to my idea of the word, a fox-hound cannot: but as it is not to be supposed that you will keep a pack of fox-hounds for the pleasure of looking at them, without doubt you will think goodness more necessary than beauty. Should you be ambitious to have a handsome pack of hounds, on no account ought you to enter an ugly dog, lest you be tempted to keep him afterwards.

I once heard an old sportsman say, that he thought a fox, to shew sport, should run four hours at least ; and, I suppose, he did not care how slow his hounds went after him. This idea, however, is not conceived in the true spirit of fox-hunting, which is not to walk down a fox, or starve him to death, but to keep close at him, and kill him as soon as you can. I am convinced a fox-hound may hunt too much ; if tender-nosed, and not over-hurried, he will always hunt enough ; whilst the highest-bred hounds may be made to tye upon the scent by improper management.*

It is youth and good spirits which best suit with fox-hunting ; slackness in the men occasions slackness in the hounds ; and one may see by the manner in which hounds hunt what kind of men they have been accustomed to. The speediest hounds may, by degrees, be rendered slow ; and it is impossible for the best to do their business as they ought unless followed with life and spirit. Men who are slack themselves will be always afraid of hurrying their hounds too much ; and by carrying this humour too far, will commit a fault which has nothing to excuse it. The best method to hunt a fox, they say, is never upon

* It more frequently is owing, either to want of patience, or want of mettle, than to want of nose, that a hound does not hunt well.

any account to cast the hounds; but, on the contrary, to let them tye upon the scent as long as they will, and that they will hit it off at last. I agree with them partly;—it certainly must be the best method *to hunt a fox*, for by this means you may hunt him from morning till night; and, if you have the luck to find him, may hunt him again the next day—the likeliest method, however, to kill him, is to take every advantage of him that you can.

All hounds go fast enough with a good scent; but it is the particular excellence of a fox-hound, when rightly managed, to get on faster with an indifferent scent than any other hound:* it is the business of a huntsman to encourage this; *and here, most probably, the hare-hunter will fail*. He has been used to take his time; he has enjoyed a cold scent like a southern hound; and has sitten patiently upon his horse to see his hounds hunt. It is, to be sure, very pretty to see; and when you consider that the hare is all the time, perhaps, within a few yards of you, and may leap up the next minute, you are perfectly contented with what you are about; but it is not so in fox-hunting: every minute that you lose is precious, and increases your difficulties; and while you

* It is a quick method of hunting that I mostly value in any hound; such as are possessed of it are seldom long off the scent; it is the reverse of slackness.

are standing still the fox is running miles. It is a satisfaction to a hare-hunter to be told where his game was seen, though a long while before; but it is melancholy news to a fox-hunter, whose game is not likely to stop. I believe I mentioned to you, in a former letter on hare hunting, a great fault which I had observed in some harriers from being let too much alone—that of *running back the heel*.—I have seen a pack of high-bred fox-hounds do the same, for the same reasons.

When hounds flag from frequent changes, and a long day, it is necessary for a huntsman to animate them as much as he can; he must keep them forward and press them on, for it is not likely, in this case, that they should over-run the scent; at these times the whole work is generally done by a few hounds, and he should keep close to them: *here I also fear that the hare-hunter will fail*:* if they come to a long fault it is over, and you had better then go home.

The

* It is at a time like this that good sportsmen may be of great service to hounds; it is the only time that they want encouragement, and it is (I am sorry to say) almost the only time that they do not receive it. Those who ride too forward in the morning will in the evening, perhaps, be too far behind, and thereby lose an opportunity that is offered them of making some amends for the mischiefs they have already done. When hounds flag from frequent changes, and the huntsman's horse sinks under the fatigue of a tiresome day, then it is that sportsmen may assist

The many chances that are against you in fox-hunting; the changing frequently; the heading of the foxes; their being coursed by sheep-dogs; long faults; cold hunting; and the dying away of the scent; make it necessary to keep always as near to the fox as you can; which should be the first and invariable principle of fox-hunting. Long days do great hurt to a pack of fox-hounds. I sat out one day last winter from the kennel at half past seven, and returned home a quarter before eight at night, the hounds running hard the greatest part of the time. The huntsman killed one horse, and tired another, and the hounds did not recover for more than a week: we took them off at last when they were running with a better scent than they had had the whole day.*—I also remember, after it was dark, to have heard a better view halloo from *an owl*, than I ever heard from a sportsman in my life, though I hope that I shall never hear such another. A long

assist them; such as know the hounds should then ride up to them; they should endeavour, by great encouragement, to keep them *running*, and get those forward that may be behind; for when hounds that are tired once come to *hunting*, they tie upon the scent, and by losing time lose every chance they had of killing the fox—great encouragement, and proper and timely assistance only can prevent it.

* Hounds, after every hard day, should have two clear days to rest; it does them less hurt to hunt two days following when their work is easy, than to hunt before they may be perfectly recovered after having been hard run.

T

day,

day, nevertheless, *once* or *twice* in a season, is of use to a huntiman; it shews the real goodness and stoutness of his hounds.

When long days happen to hounds that are low in flesh, nothing will get them up again so effectually as rest; it is for this reason hounds that are kept constantly hunted ought always to be, as sportsmen call it, *above their work*. If your hounds, either from accident or inattention, should ever be in the low condition here alluded to, be not impatient to get them out of it; should you feed them high with *flesh*, the mangle, most probably, would be the immediate consequence of it: it is rest and wholesome meat that will recover them best. It will surprize you to see how soon a dog becomes either fat or lean; a little patience, therefore, and some attention, will always enable you to get your hounds into proper condition; and I am certain, that you can receive no pleasure in hunting with them, if they be not.

I forgot, in my letter upon the feeding of hounds, to observe that such hounds as have the mangle actually upon them, or only a tendency towards it, should be fed separately from the rest. They should have no flesh; their meat should be mixed up rather thin than thick; and they should
have

have vegetables in great plenty.* I must also add, that if my hounds return from hunting earlier than they were expected, I now order them to be shut up in the lodging room till their meat be made ready for them. Hounds never rest contented till they have been fed; nor will they remain upon their benches unless they be confined; yet, without doubt, lying upon the pavement, or even standing out in the cold, after violent exercise, must be prejudicial to them.

I am glad to hear that your huntsman knows the country which he is to hunt; nothing in fox-hunting is more essential than *that*; and it may make amends for many faults. Foxes are not capricious, they know very well what they are about; are quick, I believe, at determining, and resolute in persevering: they generally have a point to go to, and, though headed and turned directly from it, seldom fail to make it good at last; *this*, therefore, is a great help to an observing huntsman.

Suffer not your huntsman to encourage his hounds too much on a bad scenting day, particularly in covers where there is much riot. *Hark, Hark, Hark*, which injudicious huntsmen are so fond of

* Sulphur made into a ball with butter, or hog's lard, and given two or three mornings following, may also be necessary.

upon every occasion, must often do mischief, and cannot do good; whilst hounds are near together, they will get sooner to the hound that challenges without that noise than with it: if it be a right scent, they will be ready enough to join; and if it be a wrong one, provided they be let alone, they will soon leave it. Injudicious encouragement, on a bad day, might make them run something or other, right or wrong.

I know of no fault so bad in a hound as that of running false; it should never be forgiven: such as are not stout, or are stiff nosed, or have other faults, may at times do good, and at their worst may do no harm; but such as run false most probably will spoil your sport. A hound capable of spoiling one day's sport is scarcely worth your keeping. Indifferent ones, such as I have above described, may be kept till you have better to supply their places.

A huntsman should know how to marshal every hound in his pack, giving to each his proper rank and precedence; for, without this knowledge, it is not possible he should make a large draft as he ought. There are, in most packs, some hounds that assist but little in killing the fox, and it is the judicious drafting off of such hounds that is a certain sign of a good huntsman.

My huntsman is very exact; he carries always a list of his hounds in his pocket, and when in a distant country, he looks it over to see if any of them be missing. He has also a book, in which he keeps a regular account where every fox is found, and where he is killed.

Your huntsman, you say, knows perfectly the country he has to hunt; let him then acquire as perfect a knowledge of his hounds: good sense and observation will do the rest, at least will do as much as you seem to require of him; for I am glad to find that you had rather depend upon the goodness of your hounds for sport than the genius of your huntsman. It is, I believe, a much surer dependance.

LETTER XXII.

ARE not your expectations somewhat too sanguine, when you think that you shall have no occasion for bag-foxes to keep your hounds in blood the first season? It may be as well, perhaps, not to turn them all out till you can be more certain that your young pack will keep good and steady without them. When blood is much wanted, and they are tired with a hard day, one of these foxes will put them into spirits, and give them, as it were, new strength and vigour.

You desire to know what I call *being out of blood*? In answer to which, I must tell you, that, in my judgment, no fox-hound can fail of killing more than three or four times following, without being visibly the worse for it. When hounds are out of blood, there is a kind of evil genius attending all they do; and though they may seem to hunt as well as ever, they do not get forward; whilst a pack of fox-hounds, well in blood, like troops flushed with conquest, are not easily withstood. What we call ill luck, day after day, when hounds kill no foxes, may frequently, I think, be traced to another cause,

2 namely,

namely, *their being out of blood*; nor can there be any other reason assigned why hounds, which we know to be good, should remain so long as they sometimes do without killing a fox.* Large packs are least subject to this inconvenience: hounds that are quite fresh, and in high spirits, least feel the want of blood. The smallest packs therefore should be able to leave at least ten or twelve couple of hounds behind them, to be fresh against the next hunting day. If your hounds be much out of blood, give them rest: take this opportunity to hunt with other hounds, to see how they are managed, to observe what stallion hounds they have, and to judge yourself, whether they be such as it is fit for you to breed from. If what I have now recommended should not succeed, if a little rest and a fine morning do not put your hounds into blood again, I know of nothing else that will; and you must attribute your ill success, I fear, to another cause.

You say, you generally hunt at a late hour: after a tolerably good run, try not to find another fox. Should you be long in finding, and should you not have success afterwards, it will hurt your hounds: should you try a long time, and

* A pack of hounds that had been a month without killing a fox, at last ran one to ground, which they dug, and killed upon the earth: the next seven days they hunted they killed a fox each day.

not find, *that* also will make them slack. Never try to find a fox after one o'clock; you had better return home, and hunt again on the next day. Not that I, in general, approve of hunting two days following with the same hounds: the trying so many hours in vain, and the being kept so long off their food, both contribute to make them slack, and nothing surely is more contrary to the true spirit of fox-hunting; for fox-hounds, I have already said, ought always to be above their work. This is another particular, in which hare-hunting and fox-hunting totally differ; for harriers cannot be hunted too much, as long as they are able to hunt at all. The slower they go, the less likely they will be to over-run the scent, and the sooner, in all probability, will they kill their game. I have a friend, who hunted his five days following, and assured me, that he had better sport with them the last day than the first.

I remember to have heard that a certain pack of fox-hounds, since become famous, were many weeks, from a mixture of indifferent hounds, bad management, and worse luck, without killing a fox. However, they killed one at last, and tried to find another. They found him—and they lost him—and were then, as you may well suppose, a month without killing another fox.

This

This was ill judged; they should have returned home immediately.

When hounds are much out of blood, some men proceed in a method that must necessarily keep them so: they hunt them every day; as if tiring them out were a means to give them strength and spirit: this, however, proceeds more from ill-nature and resentment than sound judgment.* As I know your temper to be the reverse, without doubt you will adopt a different method; and, should your hounds ever be in the state here described, you will keep them fresh for the first fine day; when, supposing them to be all perfectly steady, I do not question that they will kill their fox.

When hounds are in want of blood, give them every advantage: go out early; choose a good quiet morning; and throw off your hounds where they are likely to find, and are least likely to change: if it be a small cover, or furze-brake, and you can keep the fox in, it is right to do it; for the sooner that you kill him, when you are in want of blood, the better for the hounds.

* It is not the want of blood only that is prejudicial to hounds, the trying long in vain to recover a lost scent no less contributes to make them slack.

When

When hounds are in want of blood, and you get a fox into a small cover, it must be your own fault, if you do not kill him there: place your people properly, and he cannot get off again. You will hear, perhaps, that it is impossible to head back a fox. No animal is so shy, consequently, no animal is so easily headed back by those who understand it. When it is your intention to check a fox, your people must keep at a little distance from the cover side, nor should they be sparing of their voices; for, since you cannot keep him in, if he be determined to come out, prevent him, if you can, from being so inclined. All kind of mobbing is allowable, when hounds are out of blood;* and you may keep the fox in cover, or let him out, as you think the hounds will manage him best.

Though I am so great an advocate for blood as to judge it necessary to a pack of fox-hounds, yet I by no means approve of it, so far as it is sometimes carried. I have known three young foxes chopped in a furze-brake in one day, without any sport; a wanton destruction of foxes scarcely answering the purpose of blood, since that blood does hounds most good which is most dearly earned. Such sportsmen richly deserve

* Yet how many foxes owe their lives to the too great eagerness of their pursuers.

Blank days; and, without doubt, they often meet with them. Mobbing a fox, indeed, is only allowable when hounds are not likely to be a match for him without it. One would almost be inclined to think blood as necessary to the men as to the hounds, since the best chace is flat, unless you kill the fox. When you ask a fox-hunter what sport he has had, and he replies, it was *good*, I think the next question generally is, *Did your hounds kill?* If he should say they did *not*, the conversation ends; but if, on the contrary, he tell you that they did, you then ask a hundred questions, and seldom are satisfied, till he has related every particular of the chace.

When there is snow on the ground, foxes will lie at earth.* Should your hounds be in want of blood, it will at that time be easy to dig one to turn out before them, when the weather breaks; but I seem to have forgotten a new doctrine which I lately heard, that blood is not necessary to a pack of fox-hounds. If *you* also should have taken up that opinion, I have only to wish, that the goodness of your hounds may prevent

* Earths should be watched when there is snow upon the ground, for foxes then will lie at earth. Those who are inclined to destroy them can track them in, and may dig them out.

you from changing it, or from knowing how far it may be erroneous.*

Before you have been long a fox-hunter, I expect to hear you talk of the ill luck which so frequently attends this diversion. I can assure you it has provoked me often, and has made *even a parson swear*. It was but the other day we experienced an extraordinary instance of it. We found, at the same instant, a brace of foxes in the same cover, and they both broke at the opposite ends of it; the hounds soon got together, and went off very well with one of them; yet, notwithstanding this, such was our ill luck, that, though the hunted fox took a circle of several miles, he, at last, crossed the line of the other fox, the heel of which we hunted back to the cover from whence we came: it is true, we perceived that our scent worsted, and were going to stop the hounds; but the going off of a white frost deceived us also in that.

Many a fox have I known lost, by running into houses and stables. It is not long since my hounds lost one, when hunting in the New Fo-

* Those who can suppose the killing of a fox to be of no service to a pack of fox-hounds, may suppose, perhaps, that it does them hurt. It is going but one step further.

rest :

rest : after having tried the country round, they had given him up, and were gotten home ; when in rode a farmer, full gallop, with news of the fox : he had found him, he said, in his stable, and had shut him in. The hounds returned ; the fox, however, stood but a little while, as he was quite *run up* before.

Some years ago, my hounds running a fox across an open country, in a thick fog, the fox scarcely out of view, three of the leading hounds disappeared all of a sudden, and the whipper-in, luckily, was near enough to see it happen. They fell into a dry well, near an hundred feet deep : they and the fox remained there together till the next day ; when, with the greatest difficulty, we got them all four out.

Another time, having run a fox a burst of an hour and quarter, the severest I ever remember, the hounds, at last, got up to him by the side of a river, where he had staid for them. One hound seized him as he was swimming across, and they both went down together. The hound came up again, but the fox appeared no more. By means of a boat and a long pole we got the fox out. Had he not been seen to sink, he would hardly have been tried for *under water*, and, without doubt, we should have wondered what had become of him.

Now

Now we are in the chapter of accidents, I must mention another, that lately happened to me on crossing a river, to draw a cover on the other side of it. The river Stower frequently overflows its banks, and is also very rapid and very dangerous. The flood that morning, tho' sudden, was extensive. The neighbouring meadows were all laid under water, and only the tops of the hedges appeared. There were posts to direct us to the bridge, but we had a great length of water to pass before we could get at it; it was, besides, so deep that our horses almost swam, and the shortest legged horses and longest legged riders were worst off. The hounds dashed in as usual, and were immediately carried by the rapidity of the current, a long way down the stream. The huntsman was far behind them; and as he could advance but slowly, he was constrained to see his hounds wear themselves out in an useless contention with the current, from their efforts to get to him. It was a shocking scene! many of the hounds, when they reached the shore, had entirely lost the use of their limbs, for it froze and the cold was intolerable. Some lay as if they were dead, and others reeled, as if they had been drinking wine. Our ill luck was not yet complete; the weakest hounds, or such as were most affected by the cold, we now saw entangled in the tops of the hedges, and heard their lamentations. Well-known tongues! and such as I had

had never before heard without pleasure. It was painful to see their distress, and not know how to relieve it. A number of people, by this time, were assembled near the river side, but there was not one amongst them that would venture in. However, a guinea, at last, tempted one man to fetch out a hound that was entangled in a bush, and would otherwise have perished. Two hounds remained upon a hedge all night, and though at a considerable distance from each other when we left them, yet they got together afterwards, and the next morning, when the flood abated, they were found closely clasping each other: without doubt, it was the friendly warmth they afforded each other that kept both alive. We lost but one hound by this unlucky expedition, but could not save any of our terriers. They were seen to sink, their strength not being sufficient to resist the two enemies they had to encounter, powerful, when combined—the severity of the cold, and the rapidity of the stream.

You ask, at what time you should leave off hunting? It is a question which I know not how to answer, as it depends as much on the quantity of game that you have, as on the country that you hunt. However, in my opinion, no good country should be hunted after February; nor should there be any hunting at all after March. Spring hunting is sad destruction of
foxes:

foxes: in one week you may destroy as many as would have shewn you sport for a whole season. We killed a bitch-fox one morning, with seven young ones, which were all alive: I can assure you we missed them very much the next year, and had many blank days, which we needed not to have had, but through our own fault. I should tell you, this notable feat was performed, *literally*, on the *first of April*. If you will hunt late in the season, you should, at least, leave your terriers behind you. I hate to kill any animal out of season. A hen-pheasant, with egg, I have heard, is famous eating; yet I can assure you I never mean to taste it; and the hunting a bitch-fox, big with young, appears to me cruel and unnatural. A gentleman of my acquaintance, who killed most of his foxes at this season, was humorously called, *midwife to the foxes*.

Are not the foxes heads, which are so pompously exposed to view, often prejudicial to sport in fox-hunting? How many foxes are wantonly destroyed, without the least service to the hounds or sport to the master, that the huntsman may say he has killed so many brace! How many are digged out and killed, when blood is not wanted, for no better reason!—foxes that another day, perhaps, the earths well stopped, might have run hours, and died gallantly at last. I remember myself to have seen a pack of hounds kill three
in

in one day; and though the last ran to ground, and the hounds had killed two before, therefore could not be supposed to be in want of blood, the fox was dug out and killed upon the earth. However, it answered one purpose you would little expect—it put a clergyman present in mind that he had a *corpse to bury*, which otherwise had been forgotten.

I should have less objection to the number of foxes heads that are to be seen against every kennel door, did it ascertain with more precision the goodness of the hounds; which may more justly be known from the few foxes they lose than from the number that they kill. When you inquire after a pack of fox-hounds, whether they be good or not, and are told they seldom miss a fox, your mind is perfectly satisfied about them, and you inquire no farther: it is not always so, when you are told the number of foxes they have killed. If you ask a Frenchman what age he is of, he will tell you that he is *in good health*.—In like manner, when I am asked how many brace of foxes my hounds have killed, I feel myself inclined to say the hounds *are good*; an answer which, in my opinion, goes more immediately to the spirit of the question than any other that I could give; since the number of foxes heads is, at best, but a presumptive proof of the goodness of the hounds. In a country neighbouring to

mine foxes are difficult to be killed, and not easy to be found; and the gentlemen who hunt that country are very well contented when they kill a dozen brace of foxes in a season. My hounds kill double that number; ought it to be inferred from thence that they are twice as good?

All countries are not equally favourable to hounds: I hunt in three, all as different as it is possible to be; and the same hounds that behave well in one, sometimes appear to behave indifferently in another. Were the most famous pack, therefore, to change their good country for the bad one I here allude to, though, without doubt, they would behave well, they certainly would meet with less success than they are at present used to: our cold flinty hills would soon convince them, that the difference of strength between one fox and another—the difference of goodness betwixt one hound and another—are yet but trifles, when compared with the more material difference of a good scenting country and a bad one.*

I can

* Great inequality of scent is very unfavourable to hounds. In heathy countries the scent always lies, yet I have remarked that the many roads that cross them, and the many inclosures of poor land that surround them, render hunting in such countries at times very difficult to hounds; the sudden change from a good scent to a bad one puzzles their noses and confuses their

under-

I can hardly think you serious when you ask me, if the same hounds can hunt both hare and fox; however, thus far you may assure yourself, that it cannot be done with any degree of consistency. As to your other question of hunting the hounds yourself, *that* is an undertaking which, if you will follow my advice, you will let alone. It is your opinion, I find, that a gentleman might make the best huntsman; I have no doubt that he would, if he chose the trouble of it. I do not think there is any profession, trade, or occupation, to which a good education would not be of service; and hunting, notwithstanding it is at present exercised by such as have not had an education, might, without doubt, be carried on much better by those that have. I will venture to say, fewer faults would then be committed; nor would the same faults be committed over and over again as they now are. Huntsmen never reason by analogy, nor are they much benefited by experience.

Having told you, in a former letter, what a huntsman ought to be, the following, which I can assure you is a true copy, will shew you, in some instances at least, what he ought not to be.

understandings; and many of them, without doubt, follow the scent unwillingly, owing to the little credit that they give to it. In my opinion, therefore, a scent which is less good, but more equal, is more favourable to hounds.

S I R,

YOUR's I received the 24th of this present Instant June and at your request I will give you an impartial account of my man John G——'s Character. He is a Shoemaker or Cordwainer which you please to call it by trade and now in our Town he is following the Carding Business for every one that wants him he served his Time at a Town called Brigstock in Northamptonshire and from thence in great Addington Journeyman to this Occupation as before mentioned and used to come to my house and found by riding my horses to water that he rode a horse pretty well which was not at all mistaken for he rides a horse well and he looks after a kennel of hounds very well and finds a hare very well he hath no judgment in hunting a pack of hounds now tho he rides well he dont with discretion for he dont know how to make the most of a horse but a very harey starey fellow will ride over a church if in his way tho may prevent the leap by having a gap within ten yards of him and if you are not in the field with him yourself when you are a hunting to tutor him about riding he will kill all the horses you have in the stable in one month for he hath killed downright and lamed so that will never be fit for use no more than five horses since he hath hunted my hounds which is two years and upwards he can talk no dog language to a hound he hath no voice he speaks to a hound just as if
his

his head were in a drum nor neither does he know how to draw a hound when they are at a loss no more than a child of two years old as to his honesty I always found him honest till about a week ago and have found him dishonest now for about a week ago I sent my servant that I have now to fetch some sheep's feet from Mr. Stanjan of Higham Ferrers where G—— used to go for feet and I always send my money by my man that brings the feet and Stanjan told my man that I have now that I owed him money for feet and when the boy came home he told me and I went to Stanjan and when I found the truth of the matter G—— had kept my money in his hands and had never paid Stanjan he had been along with me once for a letter in order for his character to give him one but I told him I could not give him a good one so I would not write at all G—— is a very great drunkard cant keep a penny in his pocket a sad notorious liar if you send him upon an errand a mile or two from Uppingham he will get drunk stay all day and never come home while the middle of the night or such time as he knows his master is in bed he can nor will not keep any secret neither hath he so much wit as other people for the fellow is half a fool for if you would have business done with expedition if he once gets out of the town or sight of you shall see him no more while the next morning he serves me so and so you must expect the same if you hire him I use

you juſt as I would be uſed myſelf if I deſired a character of you of a ſervant that I had deſigned to hire of yours as to let you know the truth of every thing about him.

I am Sir

Your moſt humble ſervant to command

P. S.

He takes good care of his horſes with good looking after him as to the dreſſing 'em but if you dont take care he will fill the manger full of corn ſo that he will cloy the horſes and ruin the whole ſtable of horſes.

Great Addington

June the 28th 1734.

L. E. T.

L E T T E R XXIII.

I TOLD you, I believe, at the beginning of our correspondence, that I disliked bag-foxes; I shall now tell you what my objections to them are:—the scent of them is *different* from that of other foxes; it is *too good*, and makes hounds idle; besides, in the manner in which they generally are turned out, it makes hounds very wild. They seldom fail to know what you are going about before you begin; and, if often used to hunt bag-foxes, will become riotous enough to run any thing. A fox that has been confined long in a small place, and carried out afterwards in a sack, many miles perhaps, his own ordure hanging about him, must needs stink extravagantly. You are also to add to this account, that he most probably is weakened for want of his natural food and usual exercise; his spirit broken by despair, and his limbs stiffened by confinement; he then is turned out on open ground without any point to go to: he runs down the wind, it is true, but he is so much at a loss all the while, that he loses a deal of time in not knowing what to do; while the hounds, who have no occasion to hunt, pursue as closely as if they were tied to

U 4

him.

him. I remember once to have hunted a bag-fox with a gentleman, who not thinking these advantages enough, poured a whole bottle of *aniseed* on the fox's back: I cannot say that I could have hunted the fox, but I assure you I could very easily have hunted the *aniseed*. Is it to be expected, that the same hounds will have patience to hunt a cold scent the next day o'er greasy fallows, through flocks of sheep, or on stony roads? However capable they may be of doing it, I should much doubt their giving themselves the trouble. If, notwithstanding these objections, you still chuse to turn one out, turn him into a *small* cover, give him what time you judge necessary, and lay on your hounds as quietly as you can; and, if it be possible, let them think they find him.—If you turn out a fox for blood, I should, in that case, prefer the turning him into a *large* cover, first drawing it well to prevent a change. The hounds should then find him themselves, and the sooner he is killed the better. Fifteen or twenty minutes is as long as I should ever wish a bag-fox to run that is designed for blood—the hounds should then go home.

Bag-foxes always run down the wind; such sportsmen, therefore, as chuse to turn them out, may at the same time chuse what country they shall run. Foxes that are found do not follow this rule invariably. Strong earths and large
covers

covers are great inducements, and it is no inconsiderable wind that will keep foxes from them. A gentleman, who never hunts, being on a visit to a friend of his in the country, who hunts a great deal, heard him talk frequently of *bag-foxes*; as he was unwilling to betray his ignorance, his discretion and curiosity kept him for some time in suspense; till, at last, he could not refrain from asking “ what kind of animal a *bag-fox* was?— and if it was not “ a *species of fox peculiar to that country?* ”

A pack of hounds having run a fox to ground immediately after they had found him, he was digged and turned out again; and that the operation of turning him out might be better performed, the master of the hounds undertook it himself. You will hardly believe me when I tell you, that he forgot the place where he turned him out, and they never once hit upon the scent.

If you breed up cubs, you will find a fox-court necessary: they should be kept there till they are large enough to take care of themselves. It ought to be open at the top and walled in: I need not tell you that it must be every way well secured, and particularly the floor of it, which must be either bricked or paved. A few boards fitted to the corners will also be of use to shelter and to hide them. Foxes ought to be kept very
clean,

clean, and have plenty of fresh water; birds and rabbits are their best food; horse-flesh might give them the mange, for they are subject to this disorder.—I remember a remarkable instance of it. Going out to course, I met the whipper-in returning from exercising his horses, and asked him if he had found any hares?—No, Sir, he replied, but I have caught a fox.—I saw him sunning himself under a hedge, and finding he could not run, I drove him up into a corner, got off my horse, and took him up, but he is since dead.—I found him at the place he directed me to, and he was indeed a curiosity; he had not a single hair on his brush, and very few on his body.

I have kept foxes too long; I also have turned them out too young: the safest way, I believe, will be to avoid either extreme. When cubs are bred in an earth near you, if you add two or three to the number, it is not improbable that the old fox will take care of them: of this you may be certain—that if they live they will be good foxes, for the others will shew them the country. Those which you turn into an earth should be regularly fed; if they should be once neglected, it is probable they will forsake the place, wander away, and die for want of food. When the cubs leave the earth, (which they may soon do) your gamekeeper should throw food for them in parts of the cover where it may be most easy for them

to find it; and when he knows their haunt, he should continue to feed them there: nothing destroys so much the breed of foxes as buying them to turn out, unless care be taken of them afterwards.

Your country being extensive, probably it may not be all equally good; it may be worth your while, therefore, to remove some of the cubs from one part of it into the other; it is what I frequently do myself, and find it answer.* A fox-court is of great use; it should be airy, or I cannot advise you to keep them long in it. I turned out one year ten brace of cubs, most of which, by being kept till they were tainted before they were turned out, were found dead in the covers, with scarcely any hair upon them; whilst a brace, which had made their escape by making a hole in the sack in which they were brought, lived and shewed excellent sport. Should the

* Though turned out foxes may sometimes answer the purpose of entering young hounds, yet they seldom shew any diversion; few of those I have turned into my woods have I ever seen again: besides, the turning out of foxes, and alarming the neighbourhood, may *hasten* their destruction. Foxes will be plentiful enough where traps are not set to destroy them; should they do any injury to the farmer, make satisfaction for it; encourage the neighbouring gamekeepers to preserve them by paying them handsomely for every litter of cubs that they take care of for you: if you act in this manner you may not have occasion to turn any out.

cubs be large, you may turn them out immediately: a large earth will be best for that purpose, where they ought to be regularly fed with rabbits, birds, or sheeps henges, which ever you can most conveniently get. I believe, when a fox is once tainted, he never recovers. The weather being remarkably hot, those which I kept in my fox-court (and it, at that time, was a very close one) all died, one after the other, of the same disorder.

Where rabbits are plentiful, nature will soon teach your cubs how to catch the young ones; and till that period of abundance arrives it may be necessary to provide food for them.* Where game is scarce wet weather will be most favourable to them; they can then live on beetles, chafers, worms, &c. which they will find great plenty of. I think the morning is the best time to turn them out; if turned out in the evening they will be likely to ramble, but if turned out early, and fed on the earth, there is little doubt of their remaining there.† I also recommend to you, to

* If a sheep die, let it be carried to the earth, and it will afford the cubs food for some time.

† A more certain method, perhaps, might be to pale in part of a copse which has an earth in it. It might be well stocked with rabbits, the young ones of which the cubs would soon learn to catch. You might have meuses in the pale, and let them out when capable of getting their own food.

turn

turn them into large covers and strong earths; out of small earths they are more liable to be stolen, and from small covers are more likely to stray. Your game-keeper, at this season of the year, having little to do, may feed and take care of them. When you stop any of these earths, remember to have them opened again; as, I have reason to think, I lost some young foxes one year by not doing it. For your own satisfaction, put a private mark on every fox which you turn out, that you may know him again. Your cubs, though they may get off from the covers where they were bred, when hunted, will seldom fail to return to them.

Gentlemen who buy foxes, do great injury to fox-hunting: they encourage the robbing of neighbouring hunts; in which case, without doubt, the receiver is as bad as the thief.—It is the interest of every fox-hunter to be cautious how he behaves in this particular: indeed, I believe most gentlemen are; and it may be easy to retaliate on such as are not.—I am told, that in some hunts it is the constant employment of one person to watch the earths at the breeding time, to prevent the cubs from being stolen. Furze-covers cannot be too much encouraged for that reason, for there they are safe. They have also other advantages attending them;—they are certain places to find in;—Foxes cannot break from them unseen;—

nor are you so liable to change as in other covers.*

Acquainted as I am with your sentiments, it would be needless to desire you to be cautious how you buy foxes. The price some men pay for them might well encourage the robbing of every hunt in the kingdom, their own not accepted.—But you despise the *foi disant* gentleman who receives them, more than the poor thief who takes them.—Some gentlemen ask no questions, and flatter themselves they have found out that convenient *messo termino* for the easy accommodation of their consciences.

With respect to the digging of foxes you run to ground; what I myself have observed in that business, I will endeavour to recollect. My people usually, I think, follow the hole, except when the earth is large, and the terriers have fixed the fox in an angle of it; for they then find it a more expeditious method to sink a pit as near to

* A fox, when pressed by hounds, will seldom go into a *furze-brake*. Rabbits, which are the fox's favourite food, may also be encouraged *there*, and yet do little damage. Were they suffered to establish themselves in your woods, it would be difficult to destroy them afterwards. Thus far I object to them as a farmer; I object to them, also, as a fox-hunter; since nothing is more prejudicial to the breeding of foxes, than disturbing your woods, late in the season, to destroy the rabbits.

him as they can. You should always keep a terrier in at the fox, for if you do not, he not only may move, but also, in loose ground, may dig himself further in. In digging, you should keep room enough; and care should be taken not to throw the earth where you may have it to move again. In following the hole, the surest way not to lose it, is to keep below it.—When your hounds are in want of blood, stop all the holes, lest the fox should bolt out unseen. It causes no small confusion, when this happens. The hounds are dispersed about, and asleep in different places; the horses are often at a considerable distance; and many a fox, by taking advantage of the moment, has saved his life.

If hounds want blood, and have had a long run, it is the best way, without doubt, to kill the fox upon the earth; but if they have not run long; if it be easy to dig out the fox; and the cover be such a one as they are not likely to change in; it is better for the hounds to turn him out upon the earth, and let them work for him. It is the blood that will do them most good, and may be serviceable to the hounds, to the horses, and to yourself:—digging a fox is cold work, and may require a gallop afterwards to warm you all again. Before you do this, if there be any other earths in the cover, they should be stopped, lest the fox should go to ground again.

Let your huntsman try all around, and let him be perfectly satisfied that the fox is not gone on, before you try an earth; for want of this precaution, I dug three hours to a terrier that lay all the time at a rabbit: there was another circumstance which I am not likely to forget,—“*that I had twenty miles to ride home afterwards.*” A fox sometimes runs over an earth, and does not go into it; he sometimes goes in and does not stay; he may find it too hot, and may not like the company that he meets with there: I make no doubt that he has good reasons for every thing he does, though we are not always acquainted with them.

Huntsmen, when they get near the fox, will sometimes put a hound in to draw him. This is however a cruel operation, and seldom answers any other purpose than to occasion the dog a bad bite, the foxes head generally being towards him; besides, a few minutes digging will render it unnecessary. If you let the fox first seize your whip, the hound will draw him more readily.*

You should not encourage badgers in your woods; they make strong earths, which will be ex-

* You may draw a fox by fixing a piece of whipcord made into a noose to the end of a stick; which, when the fox seizes, you may draw him out by.

penfive and troublefome to you if you do flop ; or fatal to your fport if you do not. You, without doubt, remember an old Oxford toaft,

Hounds ftout, and horfes healthy,
Earths well flopp'd, and foxes plenty.

All certainly very defirable to a fox-hunter ; yet I apprehend the *earths flopped* to be the moft neceffary, for the others, without *that*, would be ufelefs. Befides, I am not certain that earths are the fafeft places for foxes to breed in ; for frequently, when poachers cannot dig them, they will catch the young foxes in trenches, dug at the mouth of the hole, which I believe they call *tunning* them. A few large earths near to your houfe are certainly defirable, as they will draw the foxes thither, and, after a long day, will fometimes bring you home.

If foxes fhould have been bred in an earth which you think unfafe, you had better flink them out : *that*, or indeed any difturbance at the mouth of the hole, will make the old one carry them off to another place.

In open countries, foxes, when they are much difturbed, will lie at earth. If you have difficulty in finding, flinking the earths will fometimes produce them again. The method which I ufe to

stink an earth is as follows:—three pounds of sulphur, and one pound of assafœtida are boiled up together; matches are then made of brown paper, and lighted in the holes, which are afterwards stopped very close.—Earths, that are not used by badgers, may be stopped early, which will answer the same purpose; but where badgers frequent, it would be useless, for they would open them again.

Badgers may be caught alive in sacks, placed at the mouth of the hole; setting traps for them would be dangerous, as you might catch your foxes also. They may be caught by stinking them out of a great earth, and afterwards following them to a smaller one, and digging them.

Your country requires a good terrier; I should prefer the black or white terrier; some there are so like a fox, that awkward people frequently mistake one for the other. If you like terriers to run with your pack, large ones, at times, are useful; but in an earth, they do but little good, as they cannot always get up to a fox. You had better not enter a young terrier at a badger:—young terriers have not the art of shifting like old ones; and, should they be good for any thing, most probably will go up boldly to him at once, and get themselves most terribly bitten; for this reason you should enter them at young foxes,

when you can. Before I quit this subject, I must mention an extraordinary instance of sagacity in a bitch-fox, that was digged out of an earth with four young ones, and brought in a sack upwards of twenty miles to a gentleman in my neighbourhood, to be turned out the next day before his hounds. This fox, weak as she must have been, ran in a strait line back again to her own country, crossed two rivers, and was at last killed near to the earth she was digged out of the day before.—Foxes that are bred in cliffs near the sea, seldom are known to ramble any great distance from them; and sportsmen, who know the country where this fox was turned out, will tell you, that there is not the least reason to think that she could have any knowledge of it.

Besides the digging of foxes, by which method many young ones are taken, and old ones destroyed; traps, &c. too often are fatal to them. Farmers for their lambs, (which, by the bye, few foxes ever kill) gentlemen for their game, and old women for their poultry, are their inveterate enemies. I must, however, give an instance of civility I once met with from a farmer.—The hounds had found, and were running hard; the farmer came up in high spirits, and said, “ I hope, “ Sir, you will kill him; he has done me much “ damage lately; he carried away all my ducks “ last week:—I would not *gin* him though—too
 X 2 “ good

“ good a sportsman for that.”—So much for the honest farmer.—

In the country where I live most of the gentlemen are sportfinen; and even those who are not, shew every kind of attention to those who are; I am sorry it is otherwise with you: and that your old gouty neighbour should destroy your foxes, I must own, concerns me. I know some gentlemen, who, when a neighbour had destroyed all their foxes, and thereby prevented them from pursuing a favourite amusement, loaded a cart with spaniels, and went all together and destroyed his pheasants. I think they might have called this, very properly, *lex talionis*, and it had the desired effect; for as the gentleman did not think it prudent to fight them *all*, he took the wiser method, he made peace with them. He gave an order that no more foxes should be destroyed, and they never afterwards killed any of his pheasants.

LETTER XXIV.

I AM now, my friend, about to take leave of you; and at the same time that I give repose to you, let me intreat you to shew the same favour to your hounds and horses. It is now the breeding season, a proper time, in my opinion, to leave off hunting; since it is more likely to be your servants amusement, than your's; and is always to the prejudice of two noble animals, which we sportsmen are bound in gratitude to take care of.

After a long and tiresome winter, surely the horse deserves some repose. Let him then enjoy his short-lived liberty; and as his feet are the parts which suffer most, turn him out into a soft pasture. Some there are, who disapprove of grass, saying, that when a horse is in good order, the turning him out undoes it all again.—It certainly does.—Yet at the same time, I believe, that no horse can be fresh in his limbs, or will last you long without it.—Can standing in a hot stable do him any good?—and can hard exercise, particularly in the summer, be of any advantage to him? Is it not soft ground and long rest that will best

refresh his limbs, while the night air, and morning dews will invigorate his body?—Some never physic their hunters; only observing, when they first take them up from grafs, to work them gently: some turn out their's all the year. It is not unusual for such as follow the latter method, to physic their horses at grafs; they then are taken up, well fed, and properly exercised to get them into order; this done, they are turned out for a few hours every day when they are not ridden. The pasture should be dry, and should have but little grafs; there they will stretch their limbs, and cool their bodies, and will take as much exercise as is necessary for them. I have remarked, that thus treated they catch fewer colds, have the use of their limbs more freely, and are less liable to lameness than other horses. Another advantage attends this method, which, in the horses you ride yourself, you will allow to be very material:—your horse, when once he is in order, will require less strong exercise than grooms generally give their horses; and his mouth, in all probability, will not be the worse for it.

The Earl of Pembroke, in his Military Equitation, is, I find, of the same opinion; he tells us,—“ It is of the greatest consequence for horses
“ to be kept clean, regularly fed, and as regularly
“ exercised: but whoever chooses to ride in the
“ way of ease and pleasure, without any fatigue
“ on

“ on horseback, or, in short, does not like to carry
“ his horse, instead of his horse’s carrying him,
“ must not suffer his horse to be exercised by a
“ groom; standing up on his stirrups, holding
“ himself on by means of the reins, and thereby
“ hanging his whole dead weight on the horse’s
“ mouth, to the entire destruction of all that is
“ good, safe, or pleasant about the animal.”——
And in another place he says,—“ Horses should
“ be turned loose somewhere, or walked about
“ every day, when they do not work, particularly
“ after hard exercise: swelled legs, phlegm, &c.
“ will be saved by these means, and many distem-
“ pers avoided.” He also observes that, “ it is
“ a matter of the greatest consequence, though
“ few attend to it, to feed horses according to
“ their work. When the work is hard, food
“ should be in plenty; when it is otherwise, the
“ food should be diminished immediately, the hay
“ particularly.”

I have no doubt that the noble author is perfectly right in these observations: I am also of opinion that a handful or two of clean wheaten straw, chopped small, and mixed with their corn, would be of great service to your horses, provided that you have interest enough with your groom to prevail on him to give it them.

Such of my horses as are physicked at grafs, have two doses given them when they are turned out, and three more before they are taken up.—Grafts physic is of so mild a kind, that you will not find this quantity too much; nor have I ever known an accident happen from it, although it has been given in very indifferent weather. I should tell you, that my horses are always taken in, the first night after their physic, though the printed directions, I believe, do not require it. Such horses as are full of humours should be physicked at house, since they may require stronger doses than grafts physic will admit of, which, I think more proper to prevent humours, than to remove them. The only use I know in physicking a horse that does not appear to want it, is to prevent, if possible, his requiring it at a time when you cannot so well spare him—I mean the hunting season: should an accident of this kind happen, Stibium's balls, of which I send you the receipt, will be found of use :

Crocus Metallorum, levigated	2	ozs.
Stibium's ditto	-	2
Flour of brimstone	-	1
Castile soap	-	1
Liquorice powder	-	1
Honey, q. s. to make it into a paste.		

A ball of one ounce weight is to be given for three mornings successively.—The horse must be kept fasting for two hours after he has taken it: he then may have a feed of corn, and soon after that moderate exercise. The same should be repeated four days afterwards.—These balls purify the blood, and operate on the body by insensible perspiration.

I frequently give nitre to such of my hunters as are not turned out to graze;—it cools their bodies, and is of service to them. It may be given either in their water, or in their corn; I sometimes give an ounce in each.

To such of my horses as are thick winded, and such as carry but little flesh, I give *carrots*. In many stables they are given *at the time of feeding*, in the corn; I prefer giving them at any other time—for it is a food which horses are so fond of, that if by any accident you should omit the *carrots*, I doubt if they would eat the *corn*, readily, without them.

I think you are perfectly in the right to mount your people well; there is no good œconomy in giving them bad horses; they take no care of them, but wear them out as soon as they can, that they may have others.

The question you ask me about shoeing, I am unable to answer. Yet I am of opinion, that horses should be shod with more or less iron, according as the country where they hunt requires; but in this, a good farrier will best direct you. Nothing certainly is more necessary to a horse than to be well shod. The shoe should be a proper one, and it should fit his foot. Farriers are but too apt to make the foot fit the shoe.* My groom carries a false shoe, which just serves to save a horse's hoof, when he loses a shoe, till it can be put on again. In some countries you see them loaded with saws, hatchets, &c. I am

* I venture to give the following rules on shoeing—in a short and decisive manner, as founded on the strictest anatomical and mechanical principles, laid down by the best masters. The shoe should be flat, and not turned up at the heel, or reach beyond *that*, or the *toe*: but the middle part should extend rather beyond the outward edge of the hoof, that the hoof may not be contracted; the outward part of which may be pared to bring it down to an even surface, to fit it for the fixing on of the shoe.—If the foot be too long, the *toe* may be pared, or rasped down; which, in many cases, may even be necessary to preserve the proper shape of the hoof, and bring the foot to a stroke, and bearing, the most natural and advantageous. Neither the horny-sole, or frog, (meant by nature for the guard of the foot, and safety of the horse) are, upon any account, to be pared or cut away. The small, loose, ragged parts, that at times appear, should be cut off with a pen-knife; but that destructive instrument called the *butteris*, which, in the hands of stubborn ignorance, has done more injury to the feet of horses than all the chaces of the world, should be banished for ever.

glad

glad that the country in which I hunt does not require them. In the book I have just quoted, you will find the shoeing of horses treated of very much at large. I beg leave, therefore, if you want further information on that head, to refer you to it.

Having declared my disapprobation of summer hunting, on account of the horses, I must add, that I am not less an enemy to it on account of the hounds also; *they*, I think, should have some time allowed them to recover the strains and bruises of many a painful chase; and their diet, in which the adding to their strength has been, perhaps, too much considered, should now be altered. No more flesh should they now eat; but in its stead, should have their bodies cooled, with whey, greens, and thin meat: without this precaution, the mange, most probably, would be the immediate consequence of hot weather, perhaps madness:—direful malady!

As a country life has been recommended in all ages, not less for the contentment of the mind, than the health of the body, it is no wonder that hunting should be considered by so many as a necessary part of it, since nothing conduces more to both: a great genius has told us, that it is

Better to hunt in fields for health unbought,
Than see the doctor for a nauseous draught.

With

With regard to its peaceful state, according to a modern poet :

No fierce unruly senate threatens here,
 No axe, or scaffold to the view appear,
 No envy, disappointment, and despair.

}

And for the contentment which is supposed to accompany a country life, we have not only the best authority of our own time to support it, but even that of the best poets of the Augustan age. Virgil surely felt what he wrote, when he said, “ *O fortuna nimium suavi si bona norint, agricolæ;*” and Horace’s famous ode, “ *Beatus ille qui procul* “ *negotiis,*” seems not less to come from the heart of a man, who is generally allowed to have had a perfect knowledge of mankind; and this, even at the time when he was the favourite of the greatest emperor, and in the midst of all the magnificence of the greatest city in the world.

The elegant Pliny also, in his epistle to Minutius Fundanus, which is admirably translated by the Earl of Orrery, whilst he arraigns the life he leads at Rome, speaks with a kind of rapture of a country life: “ Welcome,” says he, “ thou
 “ life of integrity and virtue! welcome sweet
 “ and innocent amusement! Thou that art al-
 “ most preferable to business and employment of
 “ every kind.” And it was *here*, we are told,
 that

that the great Bacon experienced his trueſt felicity. With regard to the *Otium cum dignitate*, ſo much recommended, no one, I believe, underſtands the true meaning of it better, or practiſes it more ſucceſsfully than you do.

A rural life, I think, is better ſuited to this kingdom than to any other ; becauſe the country in England affords pleaſures and amuſements unknown in other countries ; and becauſe its rival, our Engliſh town (or ton) life, perhaps is a leſs pleaſant one than may be found elſewhere. If this, upon a nice inveſtigation of the matter, ſhould appear to be ſtrictly true, the concluſion that would neceſſarily reſult from it might prove more than I mean it ſhould ; therefore we will drop the ſubject. Should you, however, differ from me in opinion of your town life, and diſapprove what I have ſaid concerning it, you may excuſe me, if you pleaſe, as you would a lawyer, who does the beſt he can for the party for whom he is retained. I think you will alſo excuſe any expreſſions I may have uſed, which may not be current *here* ; if you find, as I verily believe you may, that I have not made uſe of a French word, but when I could not have expreſſed my meaning ſo well by an Engliſh one :—it is only an unneceſſary and affected application of a foreign language, that in my opinion, is deſerving of cenſure.

To those who may think the danger which attends upon hunting a great objection to the pursuit of it, I must beg leave to observe, that the accidents which are occasioned by it are very few. I will venture to say, that more bad accidents happen to shooters in one year than to those who follow hounds in seven. You will remind me, perhaps, of the death of T——k, and the fall of D——t; but do accidents never happen on the road? the most famous huntsman and boldest rider of his time, after having hunted a pack of hounds for several years unhurt, lost his life at last by a fall from his horse as he was returning home. A surgeon of my acquaintance has assured me, that in thirty years practice, in a sporting country, he had not once an opportunity of setting a bone for a sportsman, though ten packs of hounds were kept in the neighbourhood. This gentleman surely must have been much out of luck, or hunting cannot be so dangerous as it is thought. Besides, they are all timid animals that we pursue, nor is there any danger in attacking them: they are not like the furious beast of the *Gevaudan*, which, as a French author informs us, an army of 20,000 French chassens went out in vain to kill.

If my time in writing to you should not have been so well employed as it might have been, *you* at least will not find that fault with it; nor shall
I repent

I repent of having employed it in this manner, unless it were more certain than it is, that it would have been employed *better*. It is true, these letters are longer than I first intended they should be: they would have been *shorter* could I have bestowed *more time* upon them. Some technical words have crept in imperceptibly, and with them some expressions better suited to the field than to the closet: nor is it necessary, perhaps, that a sportsman, when he is writing to a sportsman, should make excuses for them. In some of my letters you have found great variety of matter; the variety of questions contained in *your's* made it sometimes unavoidable. I know there must be some tautology; it scarcely is possible to remember all that has been said in former letters; let that difficulty, if you please, excuse the fault. I fear there may be some contradictions for the same reason, and there may be many exceptions. I trust them all to your candour, nor can they be in better hands. I hope you will not find that I have at different times given different opinions; but should that be the case, without doubt you will follow the opinion which coincides most with your own. If on any points I have differed from great authorities, I am sorry for it; I have never hunted with those who are looked up to as the great masters of this science; and when I differ from them it is without design. Other methods, doubtless, there are, to make the keeping of hounds much
more

more expensive, which, as I do not practise myself, I shall not recommend to you;—treated after the manner here described they will kill foxes, and shew you sport. I have answered all your questions as concisely as I was able, and it has been my constant endeavour to say no more than I thought the subject required. The time may come, when more experienced sportsmen and abler pens may do it greater justice; till then, accept the observations that I have made: take them, read them, try them. There was a time when I should readily have received the information they give, imperfect as it may be; for experience is ever a slow teacher, and I have had no other. With regard to books, Somerville is the only author whom I have found of any use on this subject; you will admire the poet and esteem the man; yet I am not certain that you will be always satisfied with the lessons of the huntsman. Proud of the authority, I have quoted from him as often as it would suit your purpose; and, for your sake, have I braved the evident disadvantage that attended it. I wish this elegant poet had answered all your questions; you then would have received but one letter from me—to refer you to him. That no other writer should have followed his steps may thus, I think, be accounted for: those gentlemen who make a profession of writing live chiefly in town, consequently cannot be supposed to know much of hunting: and those

those who do know any thing of it are either servants that cannot write, or country gentlemen who will not give themselves the trouble. However, I have met with some curious remarks which I cannot help communicating to you. One author tells us, that “coursing is more agreeable than hunting, because it is sooner over:”—“that a terrier is a mungrel greyhound:”—and “that dogs have often coughs from eating fish bones.”

Another (a French author) advises us to give a horse, after hunting, “a soup made of bread and wine, and an onion.”—I fear an English groom would eat the onion and drink the wine.

The same author has also a very particular method of catching rabbits, which you will please to take in his own words, he calls it—*Chasse du lapin à l'ecrevisse*. “*Cette chasse convient aux personnes qui ne veulent employer ni furets ni armes à feu: on tend des poches d'une extrémité d'un terrier, et à l'autre on glisse une ecrevisse; cet animal arrive peu-a-peu au fond de la retraite du lapin, le pique, s'y attache avec tant de force, que le quadrupede est obligé de fuir, emportant avec lui son ennemi, et vient se faire prendre dans le filet qu'on lui a tendu à l'ouverture du terrier. Cette chasse demande beaucoup de patience: les opérations de l'ecrevisse sont lentes, mais aussi elles sont quelque fois plus sûres que celles du furet.*”

This gentleman's singular method of hunting rabbits *with a lobster*, reminds me of a method harlequin * has of killing hares, not less ingenious, with *Spanish snuff*. Brighella tells him, that the hares eat up all his master's green wheat, and that he knows not how to kill them; "no-
 " thing more easy," replies harlequin—"I will
 " engage to kill them *all* with two pennyworth
 " of snuff. They come in the night, you say,
 " to feed on the green wheat; strew a little snuff
 " over the field before they come, it will set
 " them all a sneezing; nobody will be by to say
 " *God bless you*, and, of course, they will all die."

I believe, during our present correspondence, that I have twice quoted the *Encyclopedie* with some degree of ridicule; I must, notwithstanding, beg leave to say, in justice to myself, that I have great esteem for that valuable work.

On opening a very large book called the *Gentleman's Recreation*, I met with the following remarkable passage:—"Many have written of this
 " subject, as well the antients as moderns, yet
 " but few of our countrymen to any purpose;
 " and had one all the authors on this subject,
 " (as indeed on any other) there would be more

* The harlequin of the Italian theatre, whose *tongue* is at liberty as well as his *heels*.

“trouble to pass by than to retain; most books
“being fuller of words than matter, and of that
“which is for the most part very erroneous.”—
All who have written on the subject of hunting
seem to agree in this at least, to speak indifferently
of one another.

You have observed in one of your letters, that I do not always follow my own rules; and, as a proof of it, you have remarked that many of my hounds are oddly named:—I cannot deny the charge. I leave a great deal to my huntsman; but if you aim at perfection, leave as little as you can help to your's. It is easier, I believe, in every instance, to know what is right than it is to follow it; but if the rules I have given be good, what does it signify to you whether I follow them or not? A country fellow used to call every directing post he saw a *doctor*. He was asked, why he called them so? “Why, master,” said he, “I never see them but they put me in mind of the parson of our parish, who constantly points out a road to us he does not follow himself.”

If I can add to the amusement of such as follow this diversion, I shall not think my time has been ill employed; and if the rules which are here given may any ways tend to preserve that friendly animal the hound from one unnecessary lash, I shall not think they have been written in

vain.* It never was my expectation to be able to send you a complete treatise:—*Thoughts upon Hunting, in a series of familiar Letters*, were all I proposed to myself the pleasure of sending:—the trouble I have taken in writing them entitles me to some indulgence; nor did I, therefore, whilst I endeavour to render them of use, stand in any fear of criticism. Yet if any man, as idle as I have already declared myself to be, should take the trouble to criticise these letters, tell him this:—An acquaintance of mine, who had bestowed much time in improving his place whenever he heard it found fault with, “asked where “the critic lived? whether he had any place of “his own? whether he had attempted any im- “provements? and concluded with promising a “*peep at it.*”—The gentleman here alluded to had less humility than your humble servant.

* Strangely unfortunate should I think myself, if while I profess to be a friend to dogs, I should prove their bitterest enemy, and if those rules which were intended to lessen, should increase their sufferings; convinced as I am by experience, that a regular system of education is the surest means to render correction unnecessary. Hard is that heart (if any such there be) which can ill use a creature so affectionate and so good; who has renounced his native liberty to associate with man, to whose service his whole life is dedicated: who, sensible of every kindness, is grateful for the smallest favour; while the worst usage cannot estrange his affection, in which he is (beyond all example) constant, faithful, and disinterested; who guards him by night, and amuses him by day, and is, perhaps, the only companion who will not forsake him in adversity.

Take,

Take, therefore, my sentiments in the following lines :

————— *Si quid novisti rectius istis,
Candidus imperti; si non, his utere mecum.*

HOR.

Farewell.*

* The song which was at the end of the first edition of these letters having been already printed by its author, and thought too local to be necessary here, is now omitted.

Note, Page 115, line 21, after *service*, add, I now use, instead of digestive ointment, a poultice made of Goulard, as recommended by Arnaud, in his edition of that treatise, page 203.

AN
ACCOUNT
OF THE MOST CELEBRATED
DOG KENNELS
IN THE
KINGDOM.

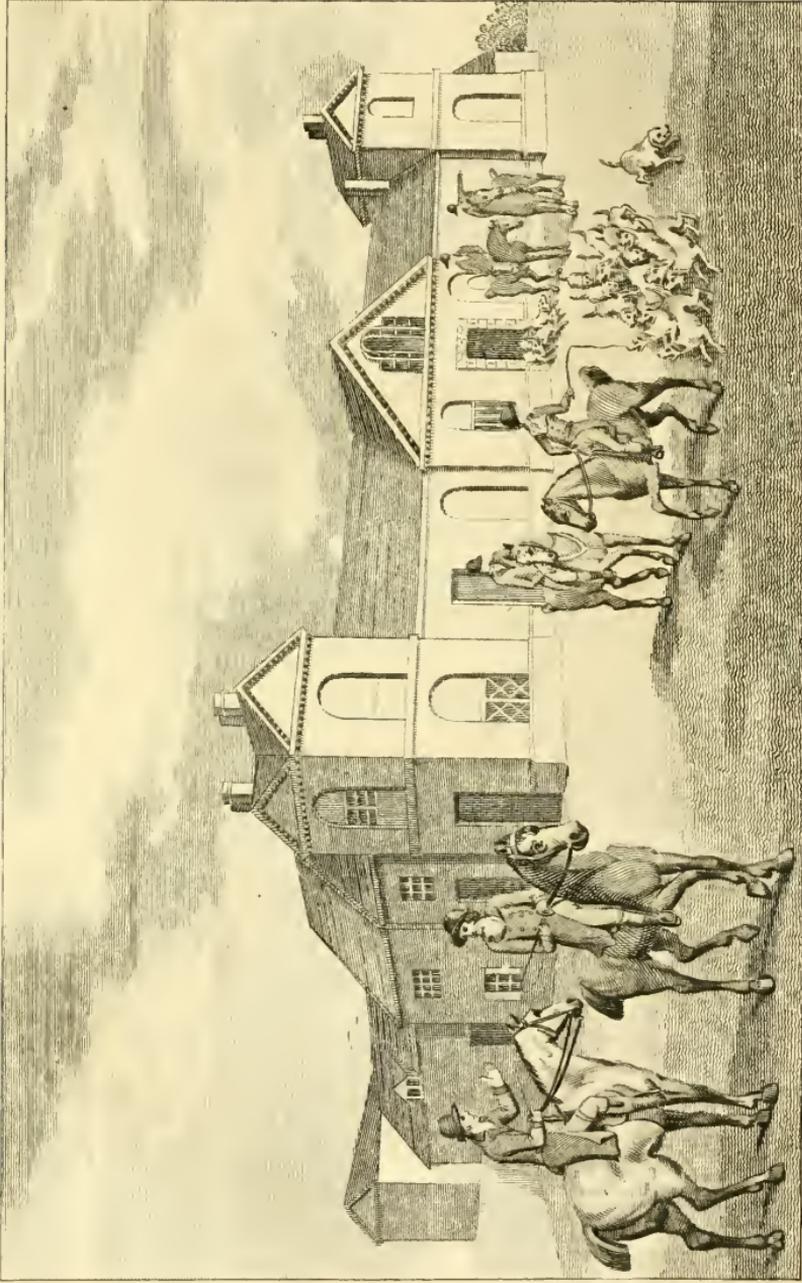

Agreeable to the intimation given at the conclusion of the second Letter of this Work, the Editor presents the Readers of it with an account of the most celebrated DOG KENNELS, beginning with—

HIS MAJESTY'S, AT ASCOT:

WITH AN EXACT REPRESENTATION OF THE SAME,
BEAUTIFULLY ENGRAVED.

THIS building is situated in the center of Ascot Heath, just below the hill, about three quarters of a mile north-west of the starting post, and includes in its advantages one of the best situations for the purpose of any in the kingdom.
To

Look and

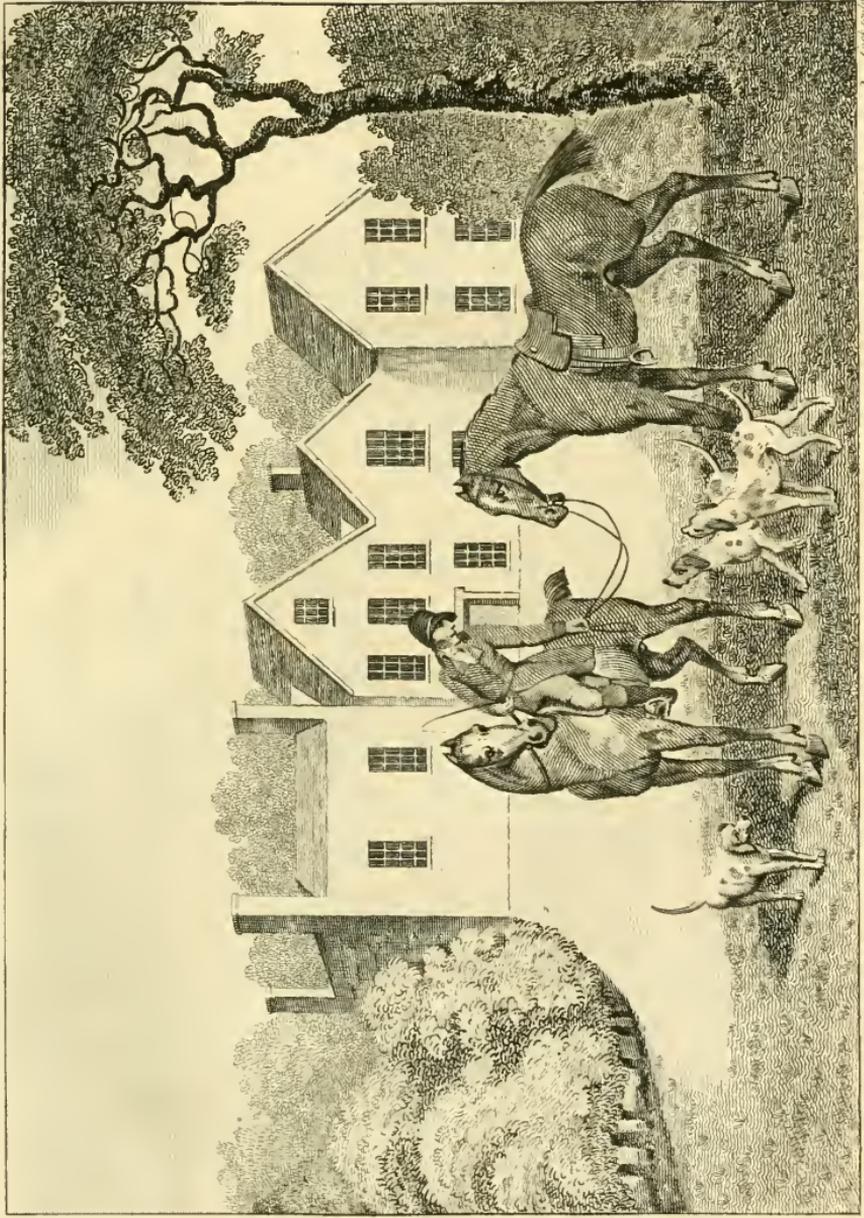

His Majesty's Dog-Herald at Iscot.

Published by J. Whode, Warwick Square, Dec. 1. 1793.

To the excellence and universally admitted superiority of the establishment, every inferior consideration becomes subservient, and the constant superintendance of his Majesty contributes to the promised attainment of every perfection. The dwelling house of Johnson, his Majesty's huntsman, constitutes a part of the fabric, and of the *interior parts* of this, his Majesty condescends to make a survey, with the same congenial ease and happy affability, as to such parts of the structure as become more immediately appropriate to public purpose. We are well aware the world in general consider his Majesty's appearance in the field as matter of *convenience* or *necessity*, and adopted only as a preservative of health or a preventative to ill; it becomes the peculiar province however, of this article, to wipe away so ridiculous an idea, and to hold forth the most unequivocal assurance that there is no sportsman in the kingdom who enters more into the minutiae of the kennel, or the energy of the chace. His Majesty is not only familiar to the names of the leading hounds in the pack, but frequently selects them in the kennel, as peculiar objects of attention. The size of the hounds, the increase of the packs, the diminution of stock, the entering of puppies, or drafting old hounds, are equally and rationally matters to which his Majesty attends, though by no means dictatorially; but once *well informed*, in reply to his inquiries, after

making his own observations, he most happily and engagingly submits the final arrangements to those whose official province it is to superintend the execution.

The hounds consist, in fact, of two packs, which pass under the denomination of the "old" and the "young hounds," and are alternately brought into use in the following way: the great body of old and staunch hounds are always selected for such deer as are known to be good runners, and constantly produced in the field when his Majesty meets: to these are frequently added three or four couple of young hounds, till the whole have been entered in rotation, and the two packs are, by such gradational introduction, enabled to constitute a kind of consolidation in respect to abilities, for whatever exigences may ensue or circumstances require.

Swinley Lodge, the residence of the Master of His Majesty's Stag Hounds.
Published March 1st by W. White, Pall Mall Square.

The Residence of the Master of his Majesty's Stag Hounds being contiguous to the above Building, an Engraving, equally descriptive of its Situation, is also annexed, and the following short Account, it is hoped, will not be deemed uninteresting.

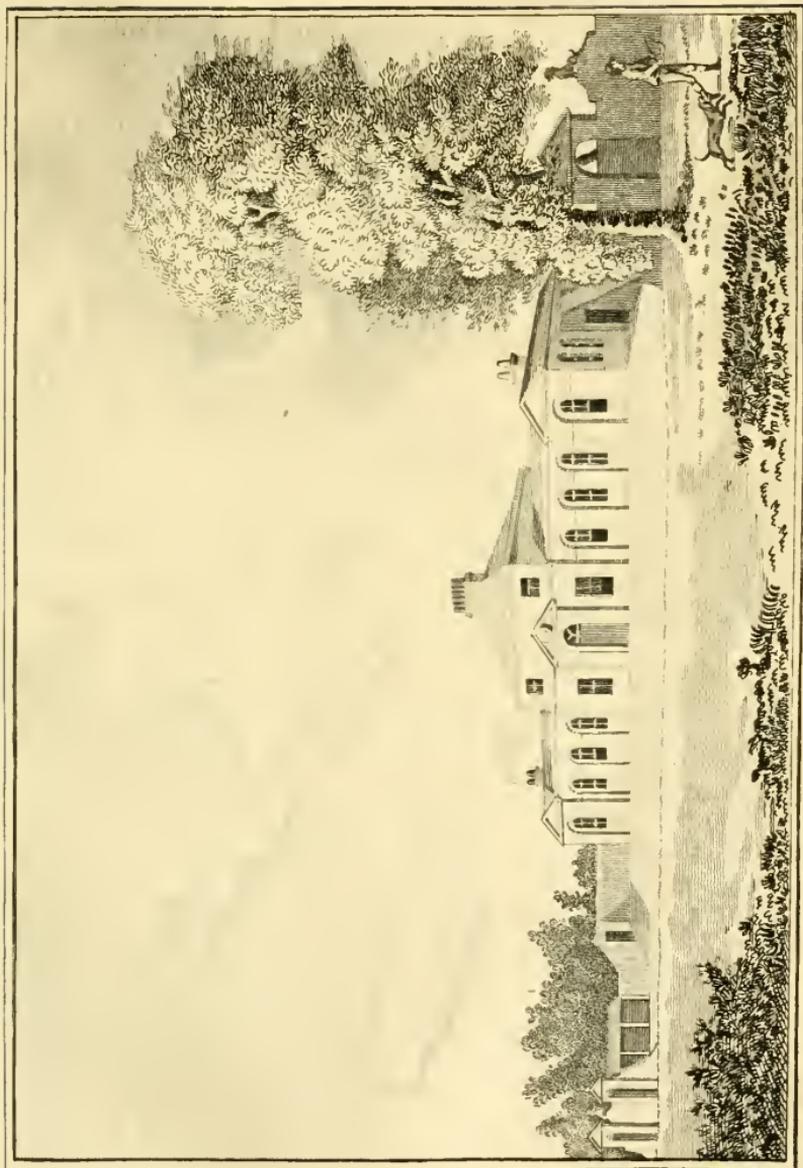

SWINLEY LODGE,

IS situated upon Ascot Heath, about a mile south-west of the starting post, surrounded by hills, and sheltered by lofty trees from such severity of the elements as is frequently experienced in situations so abstracted from rural association. Notwithstanding its sequestered aspect and remote erection in the middle of a dreary heath, it has every internal convenience to render it happily appropriate to the purpose for which it was originally intended. Exclusive of an excellent rustic mansion, possessing the room and requisites for which our buildings of former centuries are so easily distinguishable, it has annexed ranges of excellent stabling, commodious yards, domestic gardens (less in the stile of *ornament* than *utility*); paddocks applied solely to pasture for the reception of red deer, as well as various
 parcels

parcels of land, distinctly divided into the required proportions of meadow and arable, for the cultivation of such hay and corn of every kind as may be required upon the premises. To these accumulated conveniences may be added the various fish ponds, which, with the live stock of every kind produced upon the premises, may be said to constitute an aggregate of the most luxurious gratification within a fenced circle of fertility, two miles in circumference, though surrounded by one of the most *barren* spots in the universe, producing only *fuel* for the inhabitants of that and distant parishes, and *heath* for *brooms*, by manufacturing which most of the neighbouring indigents obtain a livelihood. To this district, and its surrounding hills, his Majesty's herd of red deer appertain; here they breed, and being constantly fed (like the cattle more domesticated) in the severity of the winter season, they consider it their home, and become (to those they are accustomed to see) much less ferocious, and more associate, than can well be supposed of an animal so naturally wild, and so little subject to a personal survey from human visitants.

The present resident has given a life and spirit to the scene that it never possessed during the official career of either of the two last of his predecessors, and will secure to Lord Sandwich the respect of every sportsman in the kingdom.

DUKE

The Duke of Richmond's Dog Kennel at Goodwood in Sussex.

Published according to Act of Parliament by J. Altheide, Warwick Square Dec. 5. 1793.

DUKE OF RICHMOND'S, AT GOODWOOD.

THE next that claims attention is the kennel erected by his Grace of Richmond, at Goodwood, in Suffex, and which the engraving annexed is a perfect delineation. To a person unacquainted with his Grace, the expenditure of upwards of 10,000*l.* on a dog kennel might appear a matter of surprize, but to the writer of this, who is no stranger to his munificence, it appears no more than a common occurrence.

The duke was his own architect and builder: he dug his own flints, burnt his own lime, made his own bricks, and formed the wood-work in his own shops.

THE DOG KENNEL

Is a place by itself in the park, and is a grand object to the best rooms in the house. The front is handsome. The ground is well raised about it, and turfed. The effect is good.

The dimensions.—The length is 148 feet, the depth 30; the height, from the crown of the arches

arches that support it, 18 feet on the sides; in the center 28 feet.

The materials are flints, finished at all the angles by a light grey brick, like the Lymington white stock.

The distribution of the building is into five kennels; two of them 36 by 15—three more 30 by 15; two feeding rooms, 28 by 15. In each there are openings at the top for cold air, and flues to warm the air when too cold. There are supplies of water, and drains, into a flank, as it is called, a depth below, full of rain water. From the surface of this rain water to the rise of the arch, is 11 feet; so that inconvenience from smell there is none; and the whole at any time can be cleared off, by drains, to more dependent depths, dung-pits, &c. So that, as an aid to farming, it is not altogether useless.

Round the whole building is a pavement five feet wide, airing yards, places for breeding, &c. &c. making part of each wing.

For the huntsman, and for the whipper-in, there is a parlour, a kitchen, and a sleeping room for each.

It will contain two packs; but at present the duke has only fox-hounds. The dogs are reduced from 60 to 40 couple.

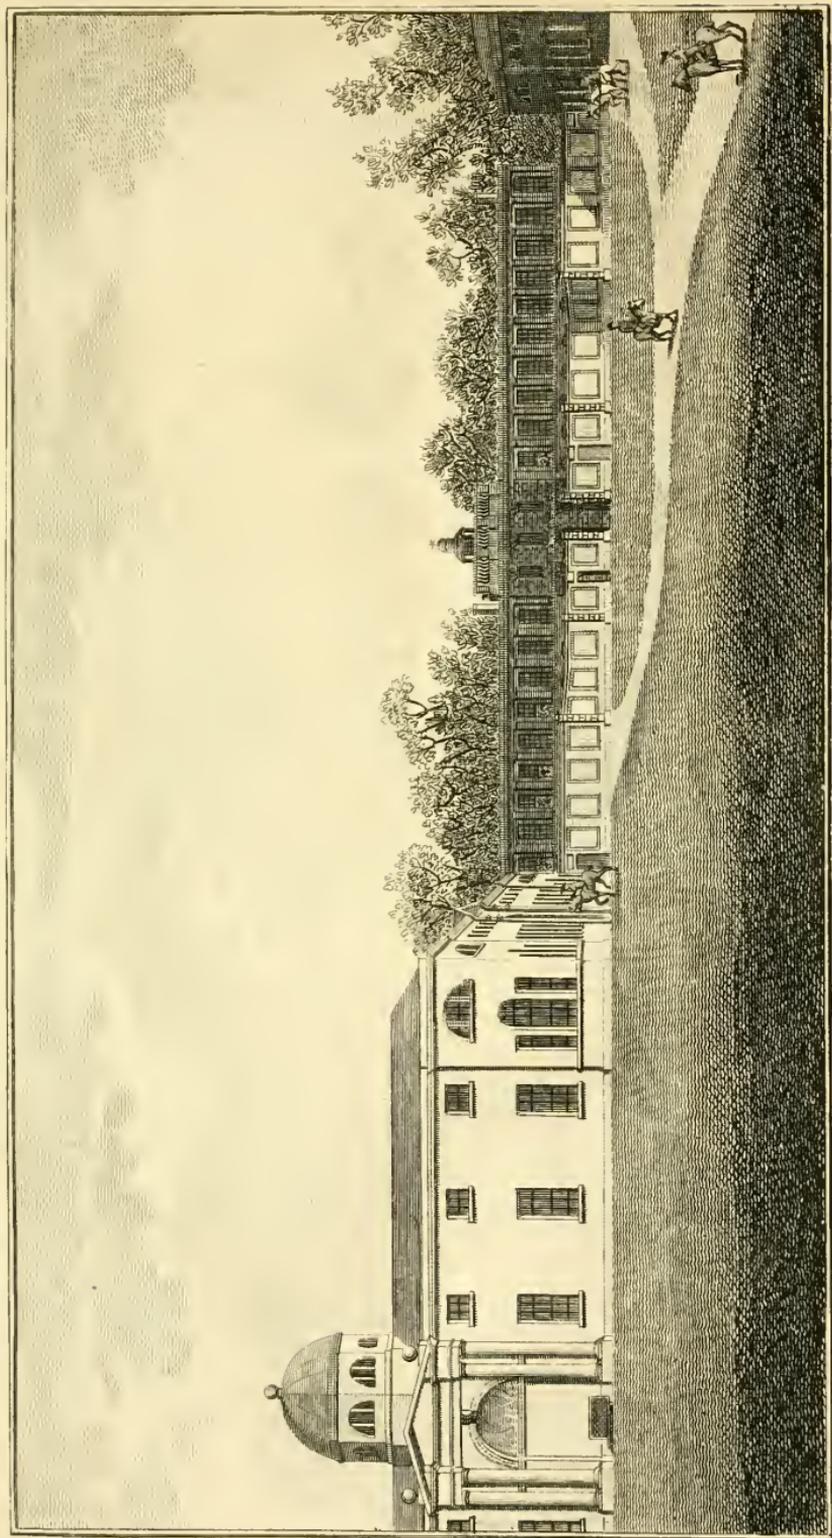

Before this building was finished, the dogs used to be kept at Hannaker and Charlton, and twelve hunters were farmed by an old huntsman, who is now dead. This part of the establishment is farmed no more.

DUKE OF BEDFORD'S, AT WOBURN
 ABBEY.

BY way of introducing what is the more immediate object of our attention, it may be necessary to slightly notice the other improvements of his Grace—particularly as the engraving which accompanies it, includes the whole of the buildings erected for his sporting establishment.

The tennis court and riding house (with apartments between to dress in) forms a building 266 feet 8 inches long, and 49 feet 6 inches wide, the whole front of which is stone: the roof is a flat one, and covered with a composition of tar, chalk, &c. instead of lead. There are flues run along the walls, and under the pavement of the tennis court, to keep off the damps: the walls of the inside of the riding house are painted in panels, with high pilasters, and the ceiling is painted to represent a clear sky.

There are two wings of stables, one of which only is yet fitted up by Mr. Holland, and contains stalls for 36 hunters, with 11 hospital apartments for sick and lame horses: there is a

THE DUKE OF BEDFORD'S STABLES, WITH THE NEW TENNIS-COURT & RIDING-HOUSE AT WOBURN ABBEY.

saddle room with glass-fronted presses, and flues running along the walls, to keep the saddles dry; two cisterns with hot and cold water, one of which is heated by the same fire that warms the flues, a pair of jockey scales, &c.

The dog kennel (esteemed the completest in England) is 405 feet long, in the center of which stands the boiling-house, with feeding-houses adjoining, and a granary behind: on the left are divisions for litter, straw, eleven apartments for bitches and puppies, with yards to each; eleven ditto for bitches in pup, with yards also, and a large division for bitches at heat. On the right of the center are apartments for two kennel keepers, two long lodging rooms for the hunting hounds, with flues running along the walls, spacious yards to each, furnished with a fountain in the center for the hounds to drink at, and water cocks issuing near the pavement, to cleanse it: adjoining to these, are seven hospitals for sick hounds, with yards to each.

In the front is a large pond, which supplies the fountains and different cocks in the several yards within.

Behind is a large airing ground, flesh-house, &c.

The

The huntsman's house is a handsome building adjoining.

Twenty-five and seventy couple of working hounds are kept in the kennel.

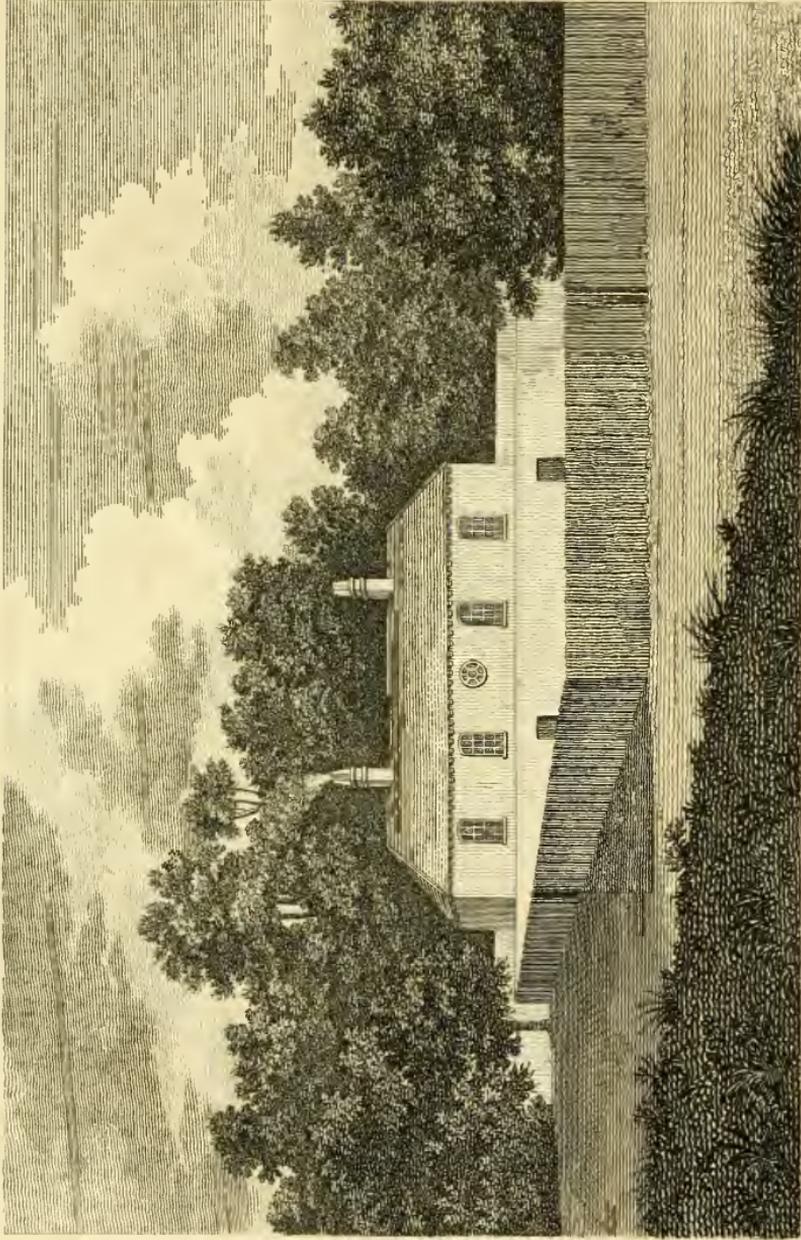

SIR WILLIAM ROWLEY'S, AT TENDER-
ING HALL, SUFFOLK.

*With a beautiful Representation of the Building,
and a Ground Plan of the same.*

NEATNESS and convenience are most happily blended together in this compact kennel, and the whole gives no bad specimen of the taste and judgment of the munificent proprietor, who planned it himself, without any reference to more sumptuous edifices.

The situation is to the eastward of the noble mansion erected by the late Admiral Sir Joshua Rowley, father to Sir William, at the distance of about half a mile. From near the kitchen garden it has a most picturesque and beautiful appearance: from this spot the view is taken.

The

Perspective View of SUR WILLIAM ROWLEY'S DOCKENELL, at Tendring Hall Suffolk

Published Sept. 1. 1793. by J. White & Warwick Court London

The kennel is placed in a deep valley in the park, a situation admirably adapted for the purpose, being equally defended from the cutting easterly winds, and the heat of the sun in its meridian, by a thick skirting of park and forest trees. Not having the advantage of a rivulet to water the courts, that want is amply supplied by a pump, which, by means of different cocks, turns the water to every part of the premises.

The entrance to the building is at *a*.

a, Is a passage, having on the right a coal-house, *b*, and on the left, *c*, the feeder's residence, which is in the convenient cottage style, with a neat bed-chamber over it.

d, Is the boiling house, with two coppers at *e*.

f, Is the furnace of a flue, which passes under the adjoining room, viz.

g, The hunting kennel, or principal lodging room: this room is 20 feet by 18 in the clear, and 18 feet high, paved with flag-stones. The beds, or benches, which cover almost the whole area, are of an excellent and original contrivance, being lathed, like some bedsteads, and all made to fold up with joints, for the convenience of washing the floor beneath them. By means of the flue

at *f*, this room is heated to any temperature, and the hounds, after severe chaces, and in wet weather, are rendered dry and comfortable in a much less time than they would be by any other means.

h, The kennel, or lodging room for the young hounds. This is of the same dimensions as the preceding, and enjoying all the same conveniences, except the flue, which would here be useless.

i, Several small kennels for bitches, previous to gestation.

k, Several small kennels for bitches with young puppies.

l, Paved court to the hunting kennel.

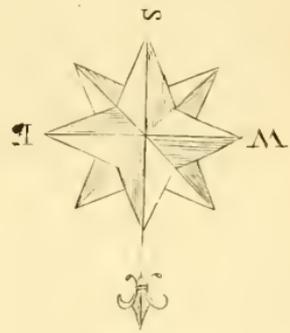

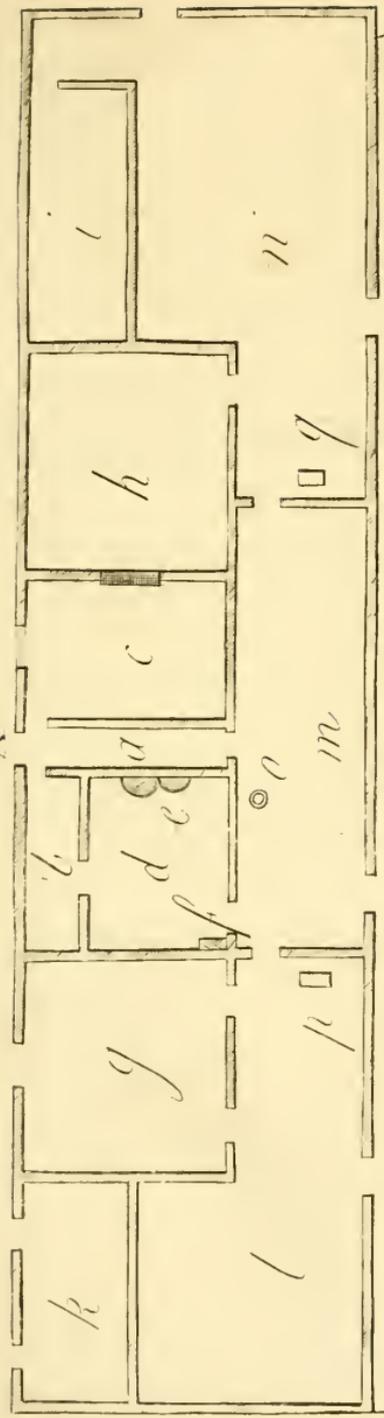

m, Feeding house, one half of which is open, the rest under cover.

n, Paved court to the young hounds' kennel.

o, Pump: *p*, *q*, stone water cisterns.

r, Great grass yard, for airing the hounds belonging to the hunting kennel, containing about an acre and three quarters.

103

3,000 ft.

PLAN OF SIR WILLIAM ROWLEY'S DOG KENNEL.

11

f, f, f, Avenue of lime, chesnut, and other trees in the great grafs yard, forming a most excellent shade for the hounds.

t, Grafs yard for the young hounds, containing about one acre and a quarter, with lime, French ash, and other trees, for shade.—N. B. The size of the plate would not admit shewing the boundaries of this yard, without diminishing the scale.

u, The park.

☞ To the puppy kennels, 12 in number, and admirably well adapted for the purpose.

Tendering Hall is beautifully situated in the parish of Stoke-by-Nayland, in Suffolk, which is separated from the county of Essex by the navigable river Stour, which runs from hence to Stratford, Dedham, Maningtree, and Mifley, where it receives vessels of considerable burthen, and proceeding on about ten miles farther, discharges itself into the ocean at Harwich.

The hunt has been established about seven years, and we run no risk of being contradicted when we say, that, with regard to the excellence of the hounds, the regulations, and the management of the pack, which consists of 36 couple,

it is inferior to none, of similar magnitude, in the kingdom.

Situated on the borders of two counties abounding with excellent covers, and every way well calculated for fox-hunting, the worthy baronet, greatly esteemed by the neighbouring gentry, and beloved by a numerous and respectable tenantry, proves himself a true descendant of Nimrod; while his lady, in the prime and bloom of life, adorned with every female virtue and accomplishment, and not less esteemed and beloved by all ranks of people than her husband, frequently enjoys with him the sports of the field, and convinces the world that the most delicate habits of thinking and acting are not incompatible with being charmed with the music of the hounds, the delights of the chase, and the health-giving exercise of equestrian diversions.
